

Contents

1. Introduction	1
2. Terminology and Table of Symbols	5
2.1 Notes on Terminology	5
2.2 Frequently Used Symbols	6
3. Binary-Encounter Electron Emission	7
3.1 Ion–Electron Elastic Collisions	7
3.2 Recoil Cross Section of Orbital Electrons	9
3.3 Recoil from a Hydrogen-Like Atom	11
3.4 Z_1^2 Scaling of the Electron Yield	13
3.5 Remarks on the Binary-Encounter Model	14
3.6 Experimental Approaches	14
3.6.1 Zero-Degree Electron Spectroscopy	15
3.6.2 Energy Distribution of All Electrons	15
4. Ion Channeling and High-Energy Shadowing	17
4.1 Classical Coulomb Shadow	17
4.2 Quantum-Mechanical Coulomb Shadow	19
4.3 Shadowing Effect: Interference of Shadow Cones	24
4.4 Shadowing Effect of High-Energy Ions	27
4.5 Continuum Model of Channeling	28
4.5.1 Scaling of the Ion Trajectory	28
4.5.2 Critical Angles	30
4.5.3 Classical Behavior of Channeled Particles	31
4.5.4 Statistical-Equilibrium Flux Distribution	31
4.6 Numerical Simulations	32
4.7 Dechanneling	34
5. Experimental Methods	37
5.1 Electron Energy Analysis	37
5.1.1 Parallel-Plate Spectrometer	37
5.1.2 Cylindrical-Mirror Analyzer	40
5.1.3 Efficiency of Electron Multipliers	42

5.2	Experimental Arrangement	43
5.3	Crystal Alignment	45
6.	Electron Escape from Solid Targets	47
6.1	Electron Scattering in Solids	47
6.2	180° Emission and Effective Escape Lengths	49
6.3	Electron Loss from Projectile Ions	52
7.	Auger Electron Emission from Crystals	55
7.1	Forward Scattering Effect	55
7.1.1	Crystal-Assisted Forward Scattering	55
7.1.2	Forward Scattering of Ion-Induced Auger Electrons ...	57
7.2	Effect of Shadowing on Auger Electron Emission	62
7.2.1	Experimental Conditions	62
7.2.2	Energy-Degraded Auger Spectra	63
7.2.3	Multiple Elastic Scattering	65
7.2.4	Determination of the Electron Stopping Power	66
8.	Binary-Encounter Electron Emission from Crystals	71
8.1	Binary-Encounter Yield	71
8.2	Normalized Channeling Yield	74
8.3	Two-Component Model of the Electron Yield	77
8.4	Electron Emission from Overlaid Crystals	79
8.4.1	Thin Unshadowed Layers	79
8.4.2	Thick Unshadowed Layers	86
8.4.3	Shadowing for All Electrons in a Crystal	89
8.4.4	Hetero-Overlayers	90
8.4.5	Negligible Intrinsic Dechanneling	97
8.5	Unshadowed Crystal Electrons	98
8.6	Classical Aspects of High-Energy Shadowing	99
9.	Electron Emission by Partially Stripped Ions	103
9.1	Charge States of Channeled Ions	103
9.2	Reduced Shadowing Effect	104
9.3	Enhanced Recoil Effect	105
9.3.1	Electron Scattering by a Screened Coulomb Field	105
9.3.2	Enhancement Factor	107
9.4	Method of Analysis	108
9.5	Determination of Z_{eff}	109
9.5.1	Experimental Data	109
9.5.2	Screened and Unscreened Yields	110
9.5.3	Charge States of Nonchanneled Ions	112
9.5.4	Analysis Results	114

9.5.5 Two Competitive Screening Effects	118
9.5.6 Nonequilibrium Charge States	120
9.6 Effective Reduction of the Screening Length	122
10. Materials Analysis	
with Binary-Encounter Electrons	127
10.1 BEES and Ion Backscattering Analysis	127
10.2 Misoriented Crystal Lattice	128
10.3 Polarity of the Zinc Blende Structure	130
10.4 Backward Channeling Microscopy	134
10.5 Bent Ionic Crystals	137
10.5.1 Experimental Details	138
10.5.2 Abnormal Shadowing Patterns	140
10.5.3 Plastically Deformed Lattices	142
11. Related Topics	145
11.1 Channeling Angular Dips	145
11.2 Specularly Reflected Ions	146
11.3 Low-Energy Shadowing	148
12. Concluding Remarks	151
References	152
Index	159
