

Contents

1	Introduction	9
1.1	Motivation	9
1.2	Outline of Contents	10
1.3	Biographical Context	11
2	Traditional BEM	15
2.1	Introduction	15
2.2	Boundary Integral Equations (BIE)	16
2.2.1	Reciprocity relation	16
2.2.2	Inversion of the differential operator	18
2.2.3	Galerkin and collocation BIE	19
2.3	Complete System of BIE	21
2.3.1	Differentiation of BIE	21
2.3.2	Symmetric system of BIEs	23
3	Distributional BEM	25
3.1	Distributional Context	25
3.2	Distributional Description of the Domain	26
3.2.1	The cutoff - distribution	26
3.2.2	The normal vector	28
3.3	Distributional BIE	28

3.3.1	Distributional reciprocity	28
3.3.2	Distributional Galerkin BIE	30
3.3.3	Regularized BIE	32
4	Fourier BEM	35
4.1	The Principal Idea	35
4.2	Fourier Transform of BIE	35
4.2.1	Transformed Galerkin BIE	35
4.3	Transformed fundamental solutions	38
4.3.1	Fundamental solutions	38
4.3.2	Green's functions	39
4.4	Transformed Trial and Test Functions	41
4.4.1	Transform of the cutoff distributions	41
4.4.2	Transform of the trial functions	42
4.5	Construction of the BEM matrices	43
5	Heat Conduction	45
5.1	Isotropic Case	45
5.1.1	The Dirichlet problem	45
5.1.2	The Neumann problem	50
5.1.3	The mixed boundary value problem	55
5.1.4	Some computational aspects	57
5.2	Anisotropic Case	58
5.2.1	The mixed boundary value problem	58
5.2.2	The Dirichlet problem	59
5.2.3	The three-dimensional case	61

6	Elasticity	63
6.1	Isotropic Case	63
6.1.1	The mixed boundary value problem	63
6.1.2	The Dirichlet problem in two dimensions	66
6.2	Anisotropic Case	67
6.2.1	The state of the art	67
6.2.2	General anisotropic elasticity	68
6.2.3	Orthotropic elasticity in \mathbb{R}^2	69
6.2.4	Transverse isotropic elasticity in \mathbb{R}^3	71
7	Plates	73
7.1	The Thin Plate	73
7.1.1	Isotropic case	73
7.1.2	Orthotropic case	85
7.1.3	General anisotropic case	87
7.1.4	The thin plate on a Winkler foundation	88
7.1.5	Combined bending and stressing of thin plates	89
7.2	Refined Plate Theories	90
7.2.1	The thick plate	90
7.2.2	Thick plates on Winkler foundations	93
8	Waves	95
8.1	Transient Problems	95
8.1.1	Fourier BIE for transient problems	95
8.1.2	The elastic bar	96
8.1.3	Scalar waves in isotropic media	99
8.1.4	Waves in isotropic elastic media	100
8.1.5	Initial conditions	102
8.1.6	Transient plate problems	102

8.1.7	Dynamic analysis for bended and stressed plates	103
8.1.8	Dynamic poroelasticity	104
8.2	Stationary Problems	105
8.2.1	The stationarity assumption	105
8.2.2	Scalar waves in isotropic media	106
8.2.3	Elastic waves in isotropic media	107
9	Thermoelasticity	109
9.1	Coupled Thermoelasticity	109
9.1.1	Coupled anisotropic thermoelasticity	109
9.1.2	Coupled isotropic thermoelasticity	112
9.2	Simplified Thermoelastic Models	113
9.2.1	Thermal stresses	113
9.2.2	Coupled quasi-static thermoelasticity	113
9.2.3	Uncoupled quasi-static thermoelasticity	114
9.2.4	Stationary thermoelasticity	114
10	Non-linearity	115
10.1	Physical Non-linearity	115
10.1.1	Inelastic problems	115
10.2	Geometrical Non-linearity	119
10.2.1	Large deflection of thin elastic plates	119
10.2.2	Dual reciprocity methods in Fourier space	122
11	Wavelets	125
11.1	Fundamentals of Wavelet Theory	125
11.1.1	Data compression by wavelets	125
11.1.2	The wavelet transform	127
11.1.3	Multiresolution analysis	130

11.2 Wavelet Galerkin Discretization	134
11.2.1 Matrix compression in the original space	134
11.2.2 Matrix compression in Fourier space	136
12 Conclusions	139
12.1 Results	139
12.2 Open Questions	140
A Glossary	143
A.1 Distribution theory	143
A.2 Boundary Element Method	148
B Special Distributions	153
C Integration of BEM matrices	161
C.1 Analytical integrations	161
C.1.1 Singular integrals by Fourier transform	161
C.1.2 Additional regular Fourier pairs	161
C.1.3 Additional singular Fourier pairs	162
C.2 Numerical integrations	164

Fourier BEM

Generalization of Boundary Element Methods by Fourier
Transform

Duddeck, F.M.E.

2002, II, 182 p., Hardcover

ISBN: 978-3-540-43138-1
