

LB-CONTENTS

GROUP VIII: Advanced Materials and Technologies

VOLUME 3

Energy Technologies

SUBVOLUME A

Fossil Energy

	Title page, Authors, Preface	
	Introduction (K. HEINLOTH)	1
1	Energy survey (K. HEINLOTH)	4
1.1	Worldwide demand and supply of energy	4
1.2	Efficient use of energy	10
1.3	References for 1	13
2	Fossil fuels	14
2.1	Coal exploitation technologies (H.-W. SCHIFFER)	14
2.1.1	The role of coal in world energy supply	14
2.1.2	World coal deposits	14
2.1.3	Deposits	14
2.1.4	Extraction types and mining techniques	15
2.1.5	Beneficiation	18
2.1.6	Quality requirements	19
2.1.7	Transportation and handling	20
2.1.8	Costs of the entire coal chain	21
2.1.9	Price formation	22
2.1.10	Prospects	24
2.1.11	References for 2.1	24
2.2	Oil exploitation technologies (M. KOSINOWSKI)	25
2.2.1	Introduction	25
2.2.2	Amount of global resources	26
2.2.3	Principles of technology	29
2.2.4	Emissions related to exploration, production and consumption of oil	36
2.2.5	Specification of cost	37
2.2.6	Cumulative energy demand for providing fuels	38
2.2.7	Availability of oil: An outlook	38
2.2.8	References for 2.2	39
2.3	Natural gas exploitation technologies (R. GHOFrani, C. MARX)	40
2.3.1	Introduction	40
2.3.2	Amount of resources	42
2.3.3	Principle technology	49
2.3.4	Emission of gas	56
2.3.5	Costs	59
2.3.6	Expenditure of energy from exploration to consumption	62

2.3.7	Drilling, completion and production	64
2.3.8	Gas processing	70
2.3.9	Transport and storage	74
2.3.10	Examples	79
2.3.11	Outlook	87
2.3.12	References for 2.3	88
2.4	CO ₂ removal and deposition (P. FREUND)	91
2.4.1	Introduction - The need to deal with CO ₂ emissions	91
2.4.2	Greenhouse gas emissions from fossil fuels	91
2.4.3	Methods available for tackling CO ₂ emissions	92
2.4.4	Practical implementation of CO ₂ capture and storage	94
2.4.5	Cost and performance in use	97
2.4.6	Discussion	99
2.4.7	Conclusions	100
2.4.8	References for 2.4	100
3	Fossil-fueled power plants (E. WITTCHOW)	102
3.1	Power plant cycles	102
3.2	Conversion of fuel energy	116
3.3	Steam generators	123
3.4	Steam turbines	129
3.5	Gas turbines	134
3.6	Power plants and the environment	138
3.7	Power plant operation	144
3.8	References for 3	149
4	Electric power generators (M. LEIJON, R. LIU)	151
4.1	Powerformer concept	151
4.2	Background	151
4.3	Theory of Powerformer	152
4.4	The Powerformer invention	154
4.5	Cost, efficiency, reliability and environmental impact	155
4.6	Design of Powerformer	156
4.7	System aspects	161
4.8	Application of Powerformer	163
4.9	Windformer - A new system for large-scale wind power production	163
4.10	Conclusion	164
4.11	References for 4	164
5	Transmission of electric power	165
5.1	Electrical energy supply system structure and components (H.-J. HAUBRICH, B. PRIBICEVIC)	165
5.1.1	Structure and organisation of electricity supply	165
5.1.2	Characteristics of electricity supply	168
5.1.3	Cost calculation	171

5.1.4	Definition of terms	173
5.1.5	AC and DC technology	174
5.1.6	Transmission network elements	177
5.2	Wireless power transmission (H. MATSUMOTO)	187
5.2.1	Historical review of Wireless Power Transmission (WPT)	187
5.2.2	Overview of WPT	188
5.2.3	Microwave transmitter for WPT	189
5.2.4	Microwave receiver for WPT	191
5.2.5	Beam control for WPT	193
5.2.6	Solar power station/satellite - Application of WPT	196
5.2.7	References for 5	197
6	Electric batteries (K. YAMADA)	200
6.1	Definitions and principle of operation	200
6.2	Market size of batteries	203
6.3	Secondary batteries	204
6.4	Recovery and recycling	220
6.5	Life cycle analysis	223
6.6-8	Production costs - Disposal and recycling costs - Summary	226
6.9	References for 6	227
7	Fuel cells (U. STIMMING)	228
7.1	Principles of fuel cells	228
7.2	Fuel cell systems	230
7.3	Examples for application of fuel cells	239
7.4	References for 7	244
8	Road traffic technologies: Efficiency improvement of road vehicles or transportation (H. ISHITANI)	246
8.1	Energy consumption by transportation sector	246
8.2	Measures to respond to energy conservation in road traffic: Its overview	253
8.3	Technical options to solve energy issues	257
8.4	Efficient improvement using conventional Internal Combustion Engine (ICE)	263
8.5	Alternative fuel /drive train vehicles	269
8.5.1	Unconventional/zero emission and/or alternative fuel vehicles	269
8.5.2	Electric Vehicle (EV)	269
8.5.3	Hybrid Electric Vehicle (HEV)	276
8.5.4	Fuel Cell Electric Vehicle (FCEV)	288
8.5.5	Evaluation of "well to wheel" efficiency for alternative fuel vehicles	292
8.6	Infrastructures	296
8.7	References for 8	298
9	Rail and other guided transport technologies (S. SONE)	299
9.1	Energy consumption statistics	299
9.2	Analysis of energy consumption	300
9.3	Consideration on associated energy problems	304
9.4	Energy saving technologies	306

9.5	Appendix: Comparison of the two super-speed Maglev systems	317
9.6	References for 9	319
10	Air traffic technologies (H. GRIEB)	320
10.1	Introduction	320
10.2	Thermodynamic cycle data and performance characteristics as progress indicators of turbofan and ducted propfan technology	322
10.3	Airframe technology trends	329
10.4	Ecological aspects	330
10.5	Engine development options	335
10.6	Final remarks	337
10.7	List of symbols and abbreviations used in 10	337
10.8	References for 10	339
11	Ship traffic propulsion technologies (H. MEIER-PETER)	340
11.1	Introduction	340
11.2	Marine propulsion systems efficiency	343
11.3	Environmental requirements	343
11.4	Marine fuels	345
11.5	Propulsion systems	348
11.6	Power transmission systems	353
11.7-8	Safety and reliability in ship operation - Cost comparison	357
11.9	References for 11	358

Fossil Energy

2002, XVIII, 358 p. With CD-ROM., Hardcover

ISBN: 978-3-540-42943-2
