

	Title Page, Authors, Preface	
1	Introduction (P. BEISS, R. RUTHARDT, H. WARLIMONT)	1
12	Refractory metals (G. LEICHTFRIED)	4
12.1	Introduction	4
12.2	Powder production	10
12.3	Powder compaction	13
12.4	Sintering	16
12.5	Properties	22
13	Hard materials (G.E. SPRIGGS)	28
13.1	Introduction	28
13.1.1	Diamond and cubic boron nitride	28
13.1.2	Hardmetal	30
13.1.3	Cermets	32
13.2	Raw materials used in the production of hard materials	33
13.2.1	Diamond and cubic boron nitride	33
13.2.2	Hardmetals	35
13.2.3	Cermets	43
13.2.4	Properties of raw materials	45
13.2.5	Special processes	48
13.3	Production methods	49
13.3.1	Hardmetals - cermets	49
13.3.2	Diamond and cubic boron nitride	63
13.3.3	Shaping of solid components	83
13.4	Properties of hardmetals and cermets	86
13.4.1	Standards	86
13.4.2	Hardmetals and cermets	94
13.5	Properties of diamond and cubic boron nitride	118
13.5.1	Standards	118
13.5.2	Diamond - natural and synthetic	119
13.5.3	Cubic boron nitride (CBN)	129
13.5.4	CVD diamond and diamond like carbon (DLC)	135
13.5.5	Polycrystalline products	138
13.5.6	Diamond and CBN multi-phase products	139

13.6	Applications	139
13.6.1	Machining	139
13.6.2	Grinding	143
13.6.3	Mining	145
13.6.4	Chipless forming applications	150
13.6.5	Wear parts	153
13.6.6	Optical and electronic applications	154
13.7	Health, safety and ecology	155
13.8	Acknowledgements	157
	Figures for 13	158
14	Intermetallic materials (G. SAUTHOFF)	221
14.1	Introduction	221
14.2	Topical intermetallic materials	222
14.3	Production methods	223
14.4	Intermetallic materials for structural high temperature applications	225
14.4.1	Basic properties of constituent phases	225
14.4.2	Titanium aluminide alloys	225
14.4.3	Iron aluminides	235
14.4.4	Nickel aluminides	244
14.4.5	Silicides	253

Refractory, Hard and Intermetallic Materials

Leichtfried, G.; Sauthoff, G.; Spriggs, G.E.

2002, XIII, 267 p. 190 illus. With CD-ROM., Hardcover

ISBN: 978-3-540-42961-6
