Notation	XI
-----------------------	----

1. Introduction	1
1.1 Introduction	1
1.2 Problem class and assumptions	1
1.3 Principal results	4
1.4 Review of existing results	7
1.4.1 Elliptic problems in non-smooth domains	7
1.4.2 Regularity in terms of asymptotic expansions	9
1.4.3 hp finite element methods	15
1.4.4 Numerical methods for singular perturbations	16
1.5 Outline of the book	19

Part I. Finite Element Approximation

2. hp-FEM for Reaction Diffusion Problems: Principal Results ..	23
2.1 Setting and Introduction	23
2.2 Prelude: the one-dimensional case	24
2.2.1 Regularity in one dimension	24
2.2.2 hp -FEM in one dimension	25
2.2.3 Numerical examples	30
2.3 Regularity: the two-dimensional case	31
2.4 hp -FEM approximation	38
2.4.1 hp -meshes and spaces	38
2.4.2 The minimal hp -mesh	39
2.4.3 hp -FEM	43
2.5 Numerical Examples	45
2.5.1 The classical L-shaped domain	46
2.5.2 Robustness with respect to mesh distortion	49
2.5.3 Examples with singular right-hand side	50
2.6 h -FEM approximation	54
2.6.1 Approximation on Shishkin meshes in one dimension	55
2.6.2 h -FEM meshes	57
2.6.3 h -FEM boundary layer meshes	62

3. <i>hp</i> Approximation	73
3.1 Motivation and outline	73
3.1.1 General overview of Chapter 3	73
3.1.2 Outline of Chapter 3	75
3.1.3 Robust exponential convergence: key ingredients of proof	76
3.2 Polynomial approximation results	87
3.2.1 Notation and properties of polynomials	87
3.2.2 Approximation of analytic functions: intervals and squares	90
3.2.3 Approximation of analytic functions on triangles	93
3.2.4 The projector Π_p^∞	103
3.2.5 Anisotropic projection operators: $\Pi_p^{1,\infty}$	105
3.2.6 An optimal error estimate for an H^1 -projector	109
3.3 Admissible boundary layer meshes and finite element spaces	111
3.3.1 <i>hp</i> -meshes for the approximation of boundary and corner layers	114
3.3.2 Patchwise structured meshes	116
3.3.3 The p -version boundary layer and corner layer patches	118
3.3.4 Boundary layer mesh generation via mesh patches	120
3.3.5 Properties of the pull-backs to the patches	122
3.4 <i>hp</i> Approximation on minimal meshes	123
3.4.1 Regularity on the reference element	123
3.4.2 Approximation on minimal meshes	127

Part II. Regularity in Countably Normed Spaces

4. The Countably Normed Spaces $\mathcal{B}_{\beta,\varepsilon}^l$	141
4.1 Motivation and outline	141
4.1.1 Motivation	141
4.1.2 Outline of Chapter 4	146
4.2 The spaces $H_{\beta,\varepsilon}^{m,l}$ and $\mathcal{B}_{\beta,\varepsilon}^l$ in a Sector	146
4.2.1 Properties of the spaces $H_{\beta,\varepsilon}^{m,l}(\Omega)$	150
4.2.2 Properties of the countably normed spaces $\mathcal{B}_{\beta,\varepsilon}^l$	154
4.3 Local changes of variables for analytic functions	165
5. Regularity Theory in Countably Normed Spaces	169
5.1 Motivation and outline	169
5.1.1 Motivation	169
5.1.2 Outline of Chapter 5	172
5.2 Analytic regularity results of Babuška and Guo	173
5.3 Analytic regularity: Dirichlet problems	176
5.3.1 Analytic regularity in sectors	177
5.3.2 Regularity in curvilinear polygons	184
5.4 Neumann and transmission problems	188
5.4.1 Neumann and Robin corners	188

5.4.2	Mixed corners	195
5.4.3	Transmission problems	196
5.5	Local regularity	197
5.5.1	Preliminaries: local H^2 -regularity	200
5.5.2	Interior regularity: Proof of Proposition 5.5.1	202
5.5.3	Regularity at the boundary: Proof of Proposition 5.5.2	208
5.5.4	Regularity of transmission problems: Proof of Prop. 5.5.4	215
5.5.5	Regularity of Neumann problems: Proof of Prop. 5.5.3	224

Part III. Regularity in Terms of Asymptotic Expansions

6.	Exponentially Weighted Countably Normed Spaces	227
6.1	Motivation and outline	227
6.1.1	Motivation	227
6.1.2	Outline of Chapter 6	230
6.2	The exponentially weighted spaces $H_{\beta,\varepsilon,\alpha}^{m,l}$ and $\mathcal{B}_{\beta,\varepsilon,\alpha}^l$ in sectors	231
6.2.1	Properties of the exponentially weighted spaces	231
6.3	Change of variables: from polar to Cartesian coordinates	235
6.4	Analytic regularity in exponentially weighted spaces	238
6.4.1	Transmission problem: problem formulation	238
6.4.2	Transmission problem in exponentially weighted spaces	243
6.4.3	Analytic regularity in exponentially weighted spaces	246
6.4.4	Analytic regularity for a special transmission problem	248
7.	Regularity through Asymptotic Expansions	255
7.1	Motivation and outline	255
7.1.1	Motivation	255
7.1.2	Outline of Chapter 7	262
7.2	Regularity of the outer expansion	263
7.3	Regularity of the boundary layer expansion	267
7.3.1	Definition and properties of the boundary layer expansion	267
7.3.2	Proof of Theorem 7.3.3	270
7.4	Regularity through asymptotic expansions	283
7.4.1	Notation and main result	283
7.4.2	Proof of Theorem 7.4.5: smooth and boundary layer parts	288
7.4.3	Proof of Theorem 7.4.5: corner layer and remainder	290
	Appendix	297
A.1	Some technical lemmata	297
A.1.1	Transformations of elliptic equations	297
A.1.2	Leibniz formulas	298
A.1.3	Hardy inequalities	301
A.2	Kondrat'ev's theory for a special transmission problem	302
A.2.1	Problem formulation and notation	302
A.2.2	Proof of Proposition A.2.1	303

A.3	Stability properties of the Gauss-Lobatto interpolant	309
A.4	L^∞ projectors	310
References	311
Index	317

hp-Finite Element Methods for Singular Perturbations

Melenk, J.M.

2002, XIV, 326 p., Softcover

ISBN: 978-3-540-44201-1
