Preface	v
Introduction	xi
About the notation	xv

Part I. Fourier series and Hilbert Transform	
---	--

1. Hardy-Littlewood maximal function	
1.1 Introduction	3
1.2 Weak Inequality	4
1.3 Differentiability	6
1.4 Interpolation	8
1.5 A general inequality	9
2. Fourier Series	
2.1 Introduction	11
2.2 Dirichlet	12
2.3 Fourier Series of Continuous Functions	15
2.4 Banach continuity principle	18
2.5 Summability	20
2.6 The Conjugate Function	24
2.7 The Hilbert transform on \mathbf{R}	26
2.8 The conjecture of Luzin	28
3. Hilbert Transform	
3.1 Introduction	31
3.2 Truncated operators on $\mathcal{L}^2(\mathbf{R})$	31
3.3 Truncated operators on $\mathcal{L}^1(\mathbf{R})$	32
3.4 Interpolation	36
3.5 The Hilbert Transform	37
3.6 Maximal Hilbert Transform	39

Part II. The Carleson-Hunt Theorem

4. The Basic Step	
4.1 Introduction	51
4.2 Carleson maximal operator	51
4.3 Local norms	53
4.4 Dyadic Partition	56
4.5 Some definitions	59
4.6 Basic decomposition	60
4.7 The first term	61
4.8 Notation α/β	62
4.9 The second term	63
4.10 The third term	63
4.11 First form of the basic step	66
4.12 Some comments about the proof	66
4.13 Choosing the partition Π_α . The norm $\ f\ _\alpha$	68
4.14 Basic theorem, second form	70
5. Maximal inequalities	
5.1 Maximal inequalities for $\Delta(\Pi, x)$	73
5.2 Maximal inequalities for $H_I^* f$	75
6. Growth of Partial Sums	
6.1 Introduction	77
6.2 The seven trick	78
6.3 The exceptional set	78
6.4 Bound for the partial sums	81
7. Carleson Analysis of the Function	
7.1 Introduction	85
7.2 A musical interlude	86
7.3 The notes of f	87
7.4 The set X	89
7.5 The set S	90
8. Allowed pairs	
8.1 The length of the notes	93
8.2 Well situated notes	94
8.3 The length of well situated notes	98
8.4 Allowed pairs	99
8.5 The exceptional set	100
9. Pair Interchange Theorems	
9.1 Introduction	103
9.2 Choosing the shift m	103
9.3 A bound of $\ f\ _\alpha$	105
9.4 Selecting an allowed pair	107

10. All together	
10.1 Introduction	117
10.2 End of proof	117

Part III. Consequences

11. Some spaces of functions	
11.1 Introduction	127
11.2 Decreasing rearrangement	127
11.3 The Lorentz spaces $\mathcal{L}^{p,1}(\mu)$ and $\mathcal{L}^{p,\infty}(\mu)$	130
11.4 Marcinkiewicz interpolation theorem	134
11.5 Spaces near $\mathcal{L}^1(\mu)$	137
11.6 The spaces $\mathcal{L} \log \mathcal{L}(\mu)$ and $\mathcal{L}_{\exp}(\mu)$	141
12. The Maximal Operator of Fourier series	
12.1 Introduction	145
12.2 Maximal operator of Fourier series	145
12.3 The distribution function of S^*f	147
12.4 The operator S^* on the space \mathcal{L}_{∞}	148
12.5 The operator S^* on the space $\mathcal{L}(\log \mathcal{L})^2$	149
12.6 The operator S^* on the space \mathcal{L}^p	150
12.7 The maximal space Q	152
12.8 The theorem of Antonov	157
13. Fourier transform on the line	
13.1 Introduction	163
13.2 Fourier transform	163
References	167
Comments	171
Subject Index	173
