
Contents

1. Introduction	1
2. Cracks under stationary conditions	5
2.1 Higher-order solutions for pressure-sensitive materials	11
2.1.1 Governing equations	11
2.1.2 Plane strain fields	18
2.1.3 Plane stress fields	28
2.1.4 Two-parameter characterization based on higher-order solutions	36
2.2 Two-parameter characterizations for engineering materials	44
2.2.1 Small-scale yielding fields	44
2.2.2 Plane strain fields under general yielding	48
2.3 Effects of biaxial loads to plane stress cracks	56
2.3.1 Small-scale yielding fields	56
2.3.2 Finite-cracked geometries	61
2.4 Three-dimensional crack front fields	64
2.4.1 Modified boundary layer formulations	64
2.4.2 Finite-cracked specimens	73
2.5 Remarks	80
3. Cracks under thermal-mechanical loading conditions	83
3.1 Characterization of cracks under high temperature gradients	85
3.1.1 J controlled zone around the crack tip	90
3.1.2 $J - Q$ characterization	95
3.1.3 Plane stress crack tip fields	102
3.2 Scaling of temperature-induced material inhomogeneity	106
3.2.1 Crack tip parameters	106
3.2.2 Scaling of temperature gradients	108
3.3 Effects of transient thermal loading	114
3.3.1 Finite element modeling	114
3.3.2 Numerical results	115
3.4 Remarks	121

4. Interface cracks	123
4.1 Stationary interface crack tip fields	125
4.1.1 Cracks under the J_2 plasticity theory	125
4.1.2 Cracks in pressure-sensitive materials	139
4.1.3 General elastic-plastic interface cracks	149
4.2 Quasi-static crack growth	152
4.2.1 Anti-plane cracks	154
4.2.2 In-plane interface cracks	165
4.3 Dynamic interface crack growth	194
4.3.1 Anti-plane shear mode III cracks	195
4.3.2 Plane strain interface cracks	201
4.4 Remarks	221
5. Mixed mode crack propagation	223
5.1 Static crack growth under combined mode I and III conditions	225
5.1.1 Mode III perturbation solutions	229
5.1.2 Mode I perturbation solutions	237
5.2 Dynamic crack growth under combined mode I and III conditions	244
5.2.1 Formulation of a perturbation solution	244
5.2.2 Mode III perturbation solutions	245
5.2.3 Mode I perturbation solutions	254
5.3 Remarks	260
6. Assessment of apex-V notches	263
6.1 Higher-order solutions for power-law hardening materials	263
6.1.1 Plan strain notch-tip fields	268
6.1.2 Near-tip fields for a notch lying along an interface	279
6.1.3 Plane stress notch-tip fields	283
6.1.4 Effects of the notch bluntness	289
6.2 Notches in pressure-sensitive materials	291
6.2.1 Plane strain tip fields	291
6.2.2 Plane stress tip fields	296
6.3 Remarks	299
