Gap Junctions and Their Implications for Neurogenesis and Maturation of Synaptic Circuitry in the Developing Neocortex

B. Sutor

1	Introduction	53
	1.1 Survey of Neocortical Development	54
	1.1.1 Neurogenesis, Migration and Development of Afferents	55

1.1.2	Development of Functional Synapses	57
2	Expression of Gap Junctions in the Neocortex	61
2.1	Expression During the Embryonic Development of the Neocortex	61
2.2	Expression During the Early Postnatal Development of the Neocortex	62
3	Modulation of Gap Junction Permeability During Early Postnatal Stages of Neocortical Development	64
4	Functional Implications of Gap Junctions in the Developing Neocortex	64
4.1	Neurogenesis	65
4.2	Development of Intrinsic Neuronal Properties	67
4.3	Domains, Calcium Oscillations and Circuit Formation	67
4.4	Electrical Coupling of Inhibitory Interneurons	68
5	Concluding Remarks	69
	References	70

Influence of Radial Glia and Cajal-Retzius Cells in Neuronal Migration

M. Gierdalski and S.L. Juliano

1	Radial Glial Cells	75
2	Cajal-Retzius Cells and Reelin	76
3	MAM Model	79
4	What Prevents the Normal Laminal Pattern in E24 MAM-Treated Cortex?	82

Role of Immediate Early Gene Expression in Cortical Morphogenesis and Plasticity

K.I. Andreasson and W.E. Kaufmann

1 Neural Activity Plays a Critical Role in the Development of the Cerebral Cortex 113
 2 Learning and Development Share Mechanisms of Neural Plasticity 115
 3 Molecular Events Underlying Cortical Plasticity: the Immediate Early Gene Response 116
 4 Effector Neuronal Immediate Early Genes 119
 4.1 Growth Factors: Activin and BDNF 119
 4.2 Extracellular Matrix and Signaling Molecules: Arcadlin, tPA, and Narp 121
 4.3 Cytoskeletal Molecules: Arc 124
 4.4 Signaling Molecules: Rheb and COX-2 125
 4.5 Anchoring/Coupling Proteins: Homer 127
 5 Conclusions 129

Role of Afferent Activity in the Development of Cortical Specification

A.W. Lyckman and M. Sur

1 Introduction 139
 2 Sensory Modalities: Vision and Audition 140
 2.1 Visual Processing 140
 2.2 Auditory Processing 143
 2.3 Vision Versus Audition 144
 3 Intrinsic Determination of Modality-Specific Subregions of Cortex 144
 4 A Role for Extrinsic Inputs in Specification of Local Cortical Networks 145
 4.1 Theoretical Considerations for Experimentally Altering Cortical Inputs 145
 4.2 The Rewiring Paradigm 146
 4.3 Innervation of the Denervated MGN by the Retina 148
 4.4 Physiological Consequences of Rewiring 148
 4.5 Analyses of Rewired A1 149
 4.5.1 Receptive Field Mapping 149
 4.5.2 Optical Imaging of Intrinsic Signals 150
 4.5.3 Local Connections Within A1 150
 4.6 Other Signaling Mechanisms 151

4.7 Behavior and Effects Downstream of Primary Sensory Cortical Areas	151
4.8 Strategy to Identify and Characterize Cortical Genes Activated by Modality-Specific Inputs	152
References	154

**Regional Forebrain Patterning and Neural Subtype Specification:
Implications for Cerebral Cortical Functional Connectivity
and the Pathogenesis of Neurodegenerative Diseases**

M.F. Mehler

1 Introduction	157
2 Role of the Ventral Telencephalon in Cerebral Cortical Development	159
3 Developmental Actions of Neurogenic bHLH Genes	161
4 Mechanisms Regulating the Transition from Neurogenesis to Gliogenesis	162
5 Olig Genes and Regional Shh Signaling	163
6 Importance of Regional Forebrain Patterning for Neural Subtype Specification	165
7 Role of Local BMP Signaling in Cerebral Cortical Neuronal and OL Lineage Elaboration	167
8 Generation of OL Lineage Species in the Adult Brain: Therapeutic Implications	168
9 Role of Gap Junction Channels and GABAergic Neuronal Subtypes in Cerebral Cortical Functional Connectivity	169
10 Regional Forebrain Patterning and Neurodegenerative Diseases	170
11 Summary and Future Directions	172
