

Table of Contents

Part I History and Overview

1 Is Nature Generic?

<i>Spiros Cotsakis, Peter G.L. Leach</i>	3
1.1 Introduction	3
1.2 Principles of Cosmological Modelling	4
1.2.1 Spacetimes	4
1.2.2 Theories of Gravity	5
1.2.3 Matter Fields	6
1.3 Cosmologies	6
1.4 Cosmological Problems	8
1.4.1 The Singularity Problem	8
1.4.2 The Problem of Cosmic Topology	9
1.4.3 The Problem of Asymptotic States	9
1.4.4 Gravity Theories and the Early Universe.....	11
1.5 Outlook	12
References	14

2 Evolution of Ideas in Modern Cosmology

<i>Andreas Paraskevopoulos</i>	16
2.1 Introduction	16
2.2 The Beginnings of Modern Cosmology (1917–1950).....	17
2.3 Cosmology 1950–1970: Hot Big Bang, Singularities and Quantum Approach.....	20
2.4 Cosmology 1970–1990: Chaotic, Inflationary, Quantum and Alternative.....	22
2.5 Conclusions and Outlook	25
References	26

Part II Mathematical Cosmology

3 Constraints and Evolution in Cosmology

<i>Yvonne Choquet-Bruhat, James W. York</i>	29
3.1 Introduction	29
3.2 Moving Frame Formulas	30
3.2.1 Frame and Coframe	30
3.2.2 Metric.....	31
3.2.3 Connection	31
3.2.4 Curvature	32
3.3 (n+1)-Splitting Adapted to Space Slices	33
3.3.1 Definitions	33
3.3.2 Structure Coefficients	34
3.3.3 Splitting of the Connection	34
3.3.4 Splitting of the Riemann Tensor	35
3.4 Constraints and Evolution	36
3.5 Analytic Cauchy Problem.....	37
3.6 Non-strict Hyperbolicity of $R_{ij} = 0$	38
3.7 Wave Equation for K , Hyperbolic System.....	39
3.8 Hyperbolic-Elliptic System.....	40
3.9 Local Existence and Uniqueness	41
3.10 First Order Hyperbolic Systems	41
3.10.1 FOSH Systems	42
3.10.2 Other First Order Hyperbolic Systems.....	42
3.11 Bianchi-Einstein Equations	43
3.11.1 Wave Equation for the Riemann Tensor	43
3.11.2 Case n=3, FOS System	44
3.11.3 Cauchy Adapted Frame	45
3.11.4 FOSH system for $\mathbf{u} \equiv (\mathbf{E}, \mathbf{H}, \mathbf{D}, \mathbf{B}, \bar{\mathbf{g}}, \mathbf{K}, \bar{I})$	47
3.11.5 Elliptic - Hyperbolic System	48
3.12 Bel-Robinson Energy	49
3.12.1 Bel-Robinson Energy in a Strip.....	49
3.12.2 Local Energy Estimate	51
3.13 (n+1)-Splitting in a Time-Adapted Frame	51
3.13.1 Metric and Coframe.....	51
3.13.2 Splitting of Connection	52
3.13.3 Splitting of Curvature	53
3.13.4 Bianchi Equations (Case n=3).....	53
3.13.5 Vacuum Case	54
3.13.6 Perfect Fluid	54
3.13.7 Conclusion	56
References	57

4 Cosmological Singularities

<i>Spiros Cotsakis</i>	59
4.1 Introduction	59
4.2 Cosmologies	61
4.3 The Spacetime Metric	65
4.4 Derivatives	69
4.5 Transport and Geodesics	74
4.6 Conjugate Points and Geodesic Congruences	78
4.7 Causal Geometry	83
4.8 Globalization and Singularity Theorems	89
4.9 Cosmological Applications	91
References	93

5 Exact Cosmological Solutions

<i>Sotirios Bonanos</i>	95
5.1 Introduction: Mental Pictures of the Universe	95
5.2 Basic Assumptions and Their Implications	96
5.2.1 Assumptions	96
5.2.2 Implications	97
5.3 Homogeneous Isotropic Models	98
5.3.1 Metric Forms	98
5.3.2 Cosmological Redshift	99
5.3.3 Evolution Equations and Sources	100
5.3.4 Linear Equation of State	101
5.3.5 Particular Models	101
5.3.6 Standard Notation and the Ω - H Plane	103
5.4 Homogeneous Anisotropic Models	104
5.4.1 The Bianchi Classification	105
5.4.2 Metric Forms	105
5.4.3 Particular Models	106
5.4.4 The Nature of the Initial Singularity	108
5.5 Epilogue	109
References	109

6 Introduction to Cosmological Dynamical Systems

<i>John Miritzis</i>	111
6.1 Introduction	111
6.2 One- and Two-Fluid Isotropic Cosmologies in GR	111
6.3 Bianchi Models	118
6.4 Scalar-Tensor Isotropic Cosmologies	122
6.5 Appendix. Differential Equations. Basic Concepts	126
6.5.1 Higher-Dimensional Systems	130
6.5.2 Linearization	135
6.5.3 Limit Sets, Invariant Sets	138
6.5.4 Stability	140
References	143

Part III Astrophysical and Observational Cosmology

7 The Quest for the Cosmological Parameters

<i>Manolis Plionis</i>	147
7.1 Background and Prerequisites	147
7.1.1 Basic Elements of Dynamical Cosmology	149
7.1.2 Thermal Beginning of the Universe	151
7.1.3 Cosmological Parameters	154
7.1.4 Distribution of Matter in the Universe	158
7.2 Distance Scale, Hubble Constant and the Age of the Universe ...	163
7.2.1 Distances of Extragalactic Objects	164
7.2.2 Biases Affecting Distance Determinations	166
7.2.3 Distance Indicators	168
7.2.4 The Value of H_0 and the Age of the Universe	172
7.3 Determination of the Matter/Energy Density of the Universe ...	175
7.3.1 The CMB Fluctuation Spectrum	176
7.3.2 The Hubble Diagram with SNIa	179
7.3.3 Clustering of Galaxies, Clusters and QSO's	180
7.3.4 M/L Observations	184
7.3.5 Cluster Baryon Fraction	189
7.3.6 Large-Scale Velocity Field	190
7.3.7 Rate of Cluster Formation Evolution	196
7.4 Summary	200
References	202

8 Modern Cosmological Observations

<i>Ioannis Georgantopoulos</i>	208
8.1 Galaxies	208
8.1.1 Introduction	208
8.1.2 Some Cosmological Applications of Galactic Dynamics ..	209
8.1.3 Redshift Surveys	209
8.1.4 Number Counts and Galaxy Evolution	210
8.1.5 High Redshift Galaxies	210
8.2 Clusters and Groups of Galaxies	211
8.2.1 Introduction	211
8.2.2 Surveys for Clusters	213
8.2.3 The Cosmological Significance of Clusters	215
8.3 Active Galactic Nuclei	216
8.3.1 Introduction	216
8.3.2 AGN Surveys	217
8.3.3 The AGN Evolution	217
8.3.4 The AGN Clustering	219
8.3.5 QSOs as a Probe of the Intergalactic Medium	219
References	220

9 Cosmological Perturbations

<i>Christos G. Tsagas</i>	223
9.1 Introduction	223
9.2 Linear Newtonian Perturbations	225
9.2.1 The General Fluid Equations	226
9.2.2 The Unperturbed Background	227
9.2.3 The Linear Regime	228
9.2.4 The Jeans Length	229
9.2.5 Multi-component Fluids	230
9.2.6 Solutions	231
9.2.7 Summary	234
9.3 Linear Relativistic Perturbations	234
9.3.1 The Gauge Problem	235
9.3.2 The Relativistic Equations	236
9.3.3 The Linear Regime	238
9.3.4 Solutions	239
9.3.5 Summary	240
9.4 Baryonic Structure Formation	241
9.4.1 Adiabatic and Isothermal Perturbations	241
9.4.2 Evolution of the Sound Speed	242
9.4.3 Evolution of the Jeans Length and the Jeans Mass	243
9.4.4 Evolution of the Hubble Mass	245
9.4.5 Dissipative Effects	245
9.4.6 Scenarios and Problems	247
9.5 Non-baryonic Structure Formation	250
9.5.1 Non-baryonic Cosmic Relics	250
9.5.2 Evolution of the Jeans Mass	251
9.5.3 Evolution of the Hubble Mass	252
9.5.4 Dissipative Effects	252
9.5.5 Scenarios, Successes and Shortcomings	254
9.6 Discussion	258
References	260

10 Dark Matter: A Particle Theorist's Viewpoint

<i>Athanasios B. Lahanas</i>	262
10.1 Introduction	262
10.1.1 Einstein Equations in a Friedmann-Robertson-Walker Universe	262
10.1.2 The Hubble Constant – The Critical Density	264
10.2 The Thermal Universe	265
10.2.1 The Thermal Distributions of Particles	265
10.2.2 The Energy Densities of Photons and Neutrinos	267
10.3 The Evolution of the Universe	268
10.3.1 Solving Friedmann's Equations	268
10.3.2 “Decoupling” or “Freeze-out” of Particles	270

10.4	Dark Matter	272
10.4.1	Evidence for Dark Matter and Dark Energy	272
10.4.2	Candidates for DM - Supersymmetry	274
10.5	The Neutralino as the LSP and Its Relic Density	277
10.5.1	The Neutralino as the LSP	277
10.5.2	The Boltzmann Transport Equation	278
10.6	Constraining SUSY - Conclusions	282
	References	284

Part IV Particle and String Cosmology

11 An Introduction to Particle Physics

<i>Kyriakos Tamvakis</i>	287
11.1 The Standard Model	287
11.2 Grand Unification	293
11.3 Supersymmetry	299
11.4 The Supersymmetric Standard Model	304
11.5 Strings	310
11.6 M-Theory and Duality	315
References	317

12 Quantum Cosmology

<i>Theodosios Christodoulakis</i>	318
12.1 Introduction	318
12.2 Elements of Constrained Dynamics	319
12.2.1 Introduction	319
12.2.2 The Hamiltonian Approach	319
12.2.3 Quantization of Constrained Systems	323
12.3 A Pedagogical Example: The Kantowski-Sachs Model	325
12.3.1 The Classical Case	325
12.3.2 The Quantum Case	328
12.4 Automorphisms in Classical and Quantum Cosmology	329
12.4.1 The Simplification of Einstein's Equations	329
12.4.2 Automorphisms, Invariant Description of 3-Spaces, and Quantum Cosmology	335
References	348

13 Inflationary Cosmology

<i>George Lazarides</i>	351
13.1 Introduction	351
13.2 The Big Bang Model	353
13.2.1 Hubble Expansion	353
13.2.2 Friedmann Equation	354
13.2.3 Important Cosmological Parameters	356
13.2.4 Particle Horizon	356

13.2.5	Brief History of the Early Universe	357
13.3	Shortcomings of Big Bang	358
13.3.1	Horizon Problem	358
13.3.2	Flatness Problem	359
13.3.3	Magnetic Monopole Problem	359
13.3.4	Density Perturbations	360
13.4	Inflation	361
13.4.1	Resolution of the Horizon Problem	362
13.4.2	Resolution of the Flatness Problem	363
13.4.3	Resolution of the Monopole Problem	363
13.5	Detailed Analysis of Inflation	363
13.6	Coherent Oscillations of the Inflaton	364
13.7	Decay of the Inflaton	365
13.8	Density Perturbations from Inflation	366
13.9	Density Perturbations in ‘Matter’	369
13.10	Temperature Fluctuations	370
13.11	Hybrid Inflation	371
13.11.1	The Non-supersymmetric Version	371
13.11.2	The Supersymmetric Version	373
13.12	Extensions of Supersymmetric Hybrid Inflation	376
13.12.1	Shifted Hybrid Inflation	376
13.12.2	Smooth Hybrid Inflation	379
13.13	‘Reheating’ and the Gravitino Constraint	380
13.14	Baryogenesis via Leptogenesis	382
13.14.1	Primordial Leptogenesis	382
13.14.2	Sphaleron Effects	384
13.15	Conclusions	388
	References	388

14 String Cosmology

	<i>Nick E. Mavromatos</i>	392
14.1	Introduction	392
14.2	Introduction to String Effective Actions	394
14.2.1	World-Sheet String Formalism	394
14.2.2	Conformal Invariance and Critical Dimension of Strings	399
14.2.3	Some Hints Towards Supersymmetric Strings	404
14.2.4	Kaluza-Klein Compactification	405
14.2.5	Strings in Background Fields	407
14.2.6	Conformal Invariance and Background Fields	410
14.2.7	General Methods for Computing β -Functions	413
14.3	String Cosmology	422
14.3.1	An Expanding Universe in String Theory and the Role of the Dilaton Background	422
14.3.2	String Loop Corrections and De Sitter (Inflationary) Space Times	431

14.3.3	De Sitter Universes and Pre-big Bang Scenarios: The Crucial Role of the Dilaton Field	433
14.3.4	Some Phenomenological Implications of String Cosmology.....	437
14.4	Challenges in String Cosmology and Speculations on Their Treatment	439
14.4.1	Exit from Inflationary Phase: A Theoretical Challenge for String Theory	439
14.4.2	Cosmological Backgrounds in String Theory and World-Sheet Renormalization-Group Flow	442
14.4.3	Liouville Strings and Time as a World-Sheet RG Flow Parameter	446
14.4.4	Liouville String Universe and Time-Dependent Vacuum Energy	448
14.4.5	No Scattering Matrix for Liouville Strings.....	449
14.4.6	Graceful Exit from Inflation in Liouville Strings	451
14.5	Conclusions	454
	References	455
 15 Brane Cosmology		
	<i>Eleftherios Papantonopoulos</i>	458
15.1	Introduction	458
15.2	A Surface Σ Embedded in a D-Dimensional Manifold M	460
15.2.1	Elementary Geometry	460
15.2.2	The Embedding Procedure.....	461
15.2.3	The Israel Matching Conditions	463
15.3	Brane Cosmology in 5-Dimensional Spacetime	464
15.3.1	The Einstein Equations on the Brane.....	464
15.3.2	Cosmology on the Brane.....	466
15.4	Induced Gravity on the Brane	467
15.4.1	Cosmology on the Brane with a $^{(4)}R$ Term	468
15.5	A Brane on the Move	469
15.5.1	Cosmology of the Moving Brane	472
15.6	Conclusions	473
	References	475

Cosmological Crossroads

An Advanced Course in Mathematical, Physical and
String Cosmology

Cotsakis, S.; Papantonopoulos, E. (Eds.)

2002, XVI, 480 p., Hardcover

ISBN: 978-3-540-43778-9
