Preface	V
Acknowledgements	VII
1. Optical Communication	1
1.1 A Brief History of the Development of Optical Fiber Technology	1
1.2 The Roles of Optoelectronics	7
1.3 The Information Age	9
References	11
2. Medium Equations and Electrical Susceptibilities in Nonlinear Photonics	13
2.1 Medium Equations in Nonlinear Photonics	14
2.1.1 Electromagnetic Field Equations with Nonlinear Sources	14
2.1.2 Medium Equation in the Time-Space Domain	15
2.1.3 Medium Equation in the Frequency Domain	16
2.2 The Classical Approach of Electrical Susceptibility	18
2.2.1 Classical Linear Oscillators and Linear Susceptibility	18
2.2.2 Classical Anharmonic Oscillators	21
2.3 The Semiclassical Approach of Electrical Susceptibility and the Equations of Motion of the Density Operator	24
2.3.1 $\chi^{(n)}$ and Microscopic Quantum Processes	24
2.3.2 The Equations of Motion of the Density Matrix	26
2.4 The Elements of the Density Matrix and of the Susceptibility Tensor	28
2.4.1 Polarization in An Independent Molecular System	28
2.4.2 Orders of the Density Matrix Elements	29
2.4.3 Orders of Susceptibility Tensor Elements	32
2.5 The General Properties of Nonlinear Susceptibility and of the Feynman Representations	36
2.5.1 Symmetry of Nonlinear Susceptibility	36
2.5.2 Intermolecular Interactions	40

2.5.3	Feynman Diagram Representations	42
2.6	Nonlinear Susceptibility in Optical Fibers and Semiconductors, and the Kramers-Kronig Relations	44
2.6.1	Nonlinear Susceptibility in Silica Fibers	44
2.6.2	The Kramers-Kronig Relations	47
2.6.3	Nonlinear Susceptibility and Light Induced Nonlinear Refractive Index in Semiconductors	50
	References	51
3.	Wave Equations in Nonlinear Photonics	53
3.1	Electromagnetic Wave Propagation Equations in Nonlinear Photonics	53
3.1.1	Wave Equations in the Time-Space Domain	54
3.1.2	Wave Equations in the Frequency Domain	55
3.2	Slowly Varying Amplitude and Nearly Planar Wave Approximations	57
3.3	Coupled-Wave Equations in Multiwave Interactions	58
3.3.1	Coupled-Wave Equations in Three-Wave Interactions	58
3.3.2	Coupled-Wave Equations in Four-Wave Interactions	61
3.4	Nonlinear Wave-Equations in Optical Fibers	63
3.4.1	Basic Nonlinear Equations in Fibers	63
3.4.2	Lengths in Fibers, Nonlinear Fiber Coefficient and Nonlinear Photon Coefficient	66
3.5	Nonlinear Wave Equations in Semiconductors	71
	References	73
4.	Energy and Phase Relations in Nonlinear Photonics	75
4.1	Parametric and Nonparametric Processes in Nonlinear Photonics	76
4.2	Energy Conservation and Manley-Rowe Relations	78
4.3	Momentum Conservation and Perfect Phase-Matching	80
4.3.1	Momentum Conservation and the Necessity of Phase-Matching	80
4.3.2	Perfect Phase-Matching Techniques in Nonlinear Crystals	83
4.4	The Concept and Use of Quasi-Phase Matching	91
4.4.1	The Potential Applications of QPM	92
4.4.2	The Periodic and Nonperiodic QPM	93
4.4.3	QPM-SHG in Waveguides	96
	References	98

5. Some Standard Topics in Nonlinear Optics	101
5.1 Optical Second Harmonic Generation	102
5.2 Three-Wave Mixing Optical Parametric Processes	105
5.2.1 Optical Parametric Amplifiers	105
5.2.2 The Optical Parametric Oscillators	107
5.3 Optical Four-Wave Mixing and Optical Phase Conjugation	110
5.3.1 Conditions Required in Parametric FWM	110
5.3.2 Optical Phase Conjugation	112
5.4 Nonlinear Light Scattering	118
5.4.1 Stimulated Brillouin Scattering	118
5.4.2 Stimulated Raman Scattering	121
References	128
6. Semiconductor and Quantum Well Nonlinear Photonics	131
6.1 Photon-Induced Nonlinearities and Some Fast Photonic Processes in Semiconductors	132
6.1.1 The General Cases of Photon-Induced Absorption and Refractive Index Changes	132
6.1.2 The Virtual-Transient State Nonlinearities in Semiconductors	135
6.2 Franz-Keldysh Effects in Bulk Semiconductors	138
6.2.1 The Absorption Change and Refractive Index Change	138
6.2.2 The Analysis on Franz-Keldysh Effect by the Effective-Mass Theory in the Direct-Gap III-V Semiconductors	139
6.3 Particle State-Density Distributions in Quantum Wells	141
6.3.1 The Quantum-Size Effect in a Two-Dimensional Quantum Well	142
6.3.2 The Particle State-Density Distributions in Two-, One- and Zero-Dimensional Wells of Infinite Depth	148
6.4 Unique Features of QW Lasers	153
6.4.1 The Effective Band Gap Shifts to a Shorter Wavelength	154
6.4.2 The Optical Gain-Spectrum and the Optical Gain-Peak	154
6.4.3 Lower Threshold Current, Larger Quantum Efficiency, Higher Speed, Narrower Spectrum Linewidth, and Greater Output Power	155
6.4.4 High Stability of Threshold Current with Changing Temperature	156

6.5	Kramers-Kronig Relations in Quantum Well Materials	156
6.5.1	Photonic Nonlinearities in Quantum Wells	157
6.5.2	Nonlinear Absorption in the 2D Quantum Well	158
6.5.3	Kramers-Kronig Relations for 2D Quantum Wells	159
6.6	Quantum-Confined Stark Effects in Quantum Well Structures	160
6.6.1	QCSE with Extra Field	160
6.6.2	Well-Bottom Inclined by the Extra Field and Electric Absorption	161
6.6.3	Exciton Linewidth Broadening and Lifetime Shortening Caused by the Extra Field	161
6.6.4	QCSE Compared with Franz-Keldysh Effects	163
6.6.5	Semiconductor Optical Modulators of QCSE	164
	References	166
7.	Fiber Nonlinear Photonics	169
7.1	Group Velocity Dispersion and Pulse Broadening	171
7.1.1	GVD-Caused Optical Pulse Broadening	171
7.1.2	Dispersion Compensation and Dispersion-Slop Compensation	181
7.1.3	PMD Impairment and PMD Mitigation	186
7.2	Intensity-Induced Refractive Index and Phase Modulation	187
7.2.1	Intensity-Induced Refractive Index in Optical Fibers	187
7.2.2	SPM-Induced and XPM-Induced Spectrum Broadening	188
7.3	Periodically-Adjusted and Macro-Managed Transmission Systems	192
7.3.1	The Performances of a Perfect Fiber Soliton	193
7.3.2	The Compensation of Energy Losses in the Actual Soliton Transmission	196
7.3.3	The Jitter-Controlled Soliton and the Gordon-Haus Limit	199
7.3.4	The Dispersion-Managed Soliton and the Enhanced System Stiffness	201
7.4	Nonlinear Optical Fiber Loop and Light-Leading-Light	203
7.4.1	The Phase Features in the Nonlinear Fiber Loop	203
7.4.2	Light-Leading-Light in High-Speed OFC	206
	References	208

8. Photonic Nonlinearities in Fiber Communications	211
8.1 Nonlinear Photonics in Fiber Transmission and Optical Networks, Accumulation of Undesirable Effects in Transparent Networks	211
8.2 Photonic Nonlinearities in Long-Distance Fiber Transmission	215
8.2.1 Noise Spectrum Broadening, Eye-Pattern Deterioration, Power Penalty Caused by the FWM, SBS, SRS	216
8.2.2 Dispersion Compensation in the Conventional Single Mode Fiber by the FWM-OPC	218
8.3 High-Speed and OTDM/Soliton Communication Using Nonlinear Effects	222
8.3.1 Pulse Width Broadening and BER Penalty Caused by the SPM and FWM	222
8.3.2 Fiber Soliton and All Optical Demultiplexing in the OTDM Using the SPM, XPM and FWM	222
8.4 Nonlinear Effects on the WDM/DWDM OFC	225
8.4.1 Stimulated Light Scattering in WDM/DWDM OFC, Crosstalk by SBS Near 11GHz Channel-Spacing	226
8.4.2 Four-Wave Mixing in WDM/DWDM OFC	231
8.4.3 Reducing the Nonlinearities of FWM/XPM Crosstalk, SPM-GVD Broadening and Stimulated Scattering	234
8.4.4 Extremely Broadband Raman Amplifiers	237
References	240
9. Nonlinear Optical Waveguides	243
9.1 Second-Harmonic Generation	244
9.1.1 Principles	244
9.1.2 Materials	245
9.1.3 Phase-Matching Techniques	246
9.2 Nonlinear Optical Switching in Directional Couplers	249
9.2.1 Switching of Continuous Waves	249
9.2.2 Switching of Short Pulses	252
9.2.3 Materials and Experiments	253
9.3 Nonlinear Guided Waves	255
9.3.1 The Nonlinear Scalar Wave Equation	256
9.3.2 Examples of Nonlinear Guided Modes	257
9.3.3 Stability of Nonlinear Guided Modes	261
9.3.4 Spatial Solitons	263
9.4 Concluding Remarks	266
References	267

10. Interdiffused Quantum Wells —Optical Properties and Device Applications, Part I	271
10.1 Introduction	271
10.2 Techniques and Mechanism in QW Interdiffusion	278
10.2.1 Impurity Induced Disorder by Ion Implantation	281
10.2.2 Impurity Diffusion-Induced Disorder	284
10.2.3 Impurity-Free Induced Disorder by Diffusion	288
10.2.4 Interdiffusion Mechanism	289
10.3 Band Structure of Interdiffused QWs	293
10.3.1 Confined Eigenstates of EQW	294
10.3.2 Valence Subband-Mixing	295
10.3.3 Strain Effect of the InGaAs/GaAs QW	298
10.4 Intersubband Optical Transition in DFQW	301
10.4.1 Introduction	301
10.4.2 Linear and Third-Order Intersubband Absorption Coefficients	308
10.4.3 Linear and Nonlinear Intersubband Electro-absorptions in DFQW	321
10.4.4 Enhancement of the Nonlinear Third-Order Susceptibility	340
References	345
11. Interdiffused Quantum Wells —Optical Properties and Device Applications, Part II	355
11.1 Interband Optical Properties of DFQW	355
11.1.1 Interband Transitions	355
11.1.2 Electro-Optic Effect	364
11.2 Device Applications	372
11.2.1 Delineated Waveguides	372
11.2.2 Modulators	378
11.3 Summary	388
References	391
Appendices	395
Problems	399
About the Authors	407
Index	411

Nonlinear Photonics

Nonlinearities in Optics, Optoelectronics and Fiber
Communications

Guo, Y.; Kao, C.K.; Li, H.E.; Chiang, K.S.

2002, XVI, 416 p., Hardcover

ISBN: 978-3-540-43123-7
