Part I Capture, Display, and Transmission System

1 Stereoscopic HDTV

I. Yuyama, M. Okui	3
1.1 Introduction	3
1.2 Stereoscopic Human Factors	4
1.3 Psychological Effects on High-Definition and Stereoscopic Images ..	6
1.3.1 Psychological Effects of Stereoscopic HDTV – comparing 2-D and 3-D	7
1.3.2 Study on Objective Evaluation of Psychological Effects	9
1.3.3 Accommodation Response to Binocular Stereoscopic Images	9
1.4 Requirements for Stereoscopic Television	11
1.4.1 Bandwidth	11
1.4.2 Noise Characteristics	12
1.4.3 Cross-Talk Level	13
1.4.4 Geometrical Distortions and Signal Differences	14
1.4.5 Depth Resolution and Other Related Issues	14
1.4.6 Minimum Field Rate and Suitable Scanning Method for Field-Sequential Displaying	15
1.5 Shooting Method and Related Issues	16
1.6 Developments for Stereoscopic Displays in 1990s	17
1.7 Coding and Signal-Processing Technology	20
1.7.1 Coding Technologies	20
1.7.2 3-D Coding by MPEG	20
1.7.3 Disparity Detection in 3-D Pictures	21
1.7.4 2D-to-3D Conversion	22
1.8 Equipment and Facilities for Stereoscopic HDTV System	22
1.8.1 Equipment for Program Production and Display	22
1.8.2 Activities of the Stereoscopic HDTV Program	26
1.9 Visual Fatigue Issue	31
References	32

2 Autostereoscopic Imaging Systems Based on Special Optical Plates

J.-Y. Son	35
2.1 Introduction	35
2.2 Distortions in Perceived Stereoscopic Images	37
2.2.1 Distortion Analysis	37
2.2.2 A Method of Minimizing the Distortion	39
2.3 Methods of Presenting Images	40
2.3.1 Multiview Image Sequences	41
2.3.2 Methods of Increasing View Numbers	44
2.3.3 Optical Plates for Viewing Zone Forming	45
2.3.4 Methods of Forming Viewing Zone	46
2.4 Holographic Screen	54
2.4.1 The Property of Holographic Screen	54
2.4.2 Forming the Viewing Zone	55
2.4.3 Viewing Zone Size	57
2.5 Obtainable Image Depth Range	60
2.6 Methods of Increasing Number of Viewing Zones	61
2.7 Acknowledgements	64
References	64

3 A Head-Mounted Display Using a Holographic Optical Element

T. Ando, E. Shimizu	67
3.1 Introduction	67
3.2 Characteristics of HMD	69
3.2.1 Structure of the See-Through HMD	69
3.2.2 Drawbacks of HMD	69
3.3 Principle of a Holographic Optical Element for a See-Through HMD	71
3.3.1 Optical Characteristics of HOE	72
3.3.2 Principle of HOE for See-Through HMD	73
3.3.3 Proposal of a HOE for HMD	75
3.4 See-Through HMD Using a Diverging HOE	76
3.4.1 Principle of Binocular Separation	77
3.4.2 Optical Specifications of the Diverging HOE	77
3.4.3 Reconstruction Optical System	78
3.4.4 Interactive MR System	80
3.4.5 Results	81
3.5 Characteristics of the Converging HOE	82
3.5.1 Principle of the Maxwellian View	82
3.5.2 HOE for Retinal Projection Display	82
3.6 Monocular Retinal Projection Display	84
3.6.1 Structure of Retinal Projection Display	84

3.6.2	DMD as the Spatial Light Modulator (SLM)	85
3.6.3	Spatial Filtering	86
3.6.4	Results	87
3.7	Binocular Stereoscopic Retinal Projection Display	89
3.7.1	Structure of Binocular Stereoscopic Retinal Projection Display	89
3.7.2	Adjustment for the Pupil Distance	90
3.7.3	Results	91
3.8	Discussion	92
3.8.1	Viewing Area of Maxwellian View	93
3.8.2	Viewing Area in Monocular Movement	95
3.8.3	Viewing Area in Binocular Movement	96
3.9	Application	97
3.10	Conclusions and Outlook	98
	References	100

4 Three-Dimensional Television System

Based on Integral Photography

F. Okano, H. Hoshino, J. Arai, M. Yamada, I. Yuyama	101
4.1 Introduction	101
4.2 Principle of Integral Photography	101
4.3 Pseudoscopic Image and Optical Crosstalk	103
4.4 Gradient-Index Lens Array	104
4.5 Description of MTF	106
4.6 Sampling on Image Reproduction	110
4.7 Limiting Resolution	112
4.8 Viewing-Zone Angle	113
4.9 Depth Control	116
4.10 An Experimental Real-Time System	117
4.11 Conclusions	121
References	122

5 Improved-Quality Three-Dimensional Integral Imaging and Projection Using Nonstationary Optical Components

J.-S. Jang, B. Javidi	125
5.1 Introduction	125
5.2 Nonstationary Lenslet Array Technique to Overcome the Viewing Resolution Limited by the Nyquist Sampling Theorem	126
5.3 All-Optical Three-Dimensional Integral Imaging Projector Using an Optically Addressed Spatial Light Modulator	132
5.4 Improvement of Both Field of View and Viewing Angle Using Nonstationary Micro-Optics	136
5.5 Orthoscopic Three-Dimensional Real Images Using Two-Step Integral Imaging	136

5.6 Summary	140
References	141

6 Real-Time Three-Dimensional Integral Imaging Display and Object Recognition Using Volume Optical Storage

S.-H. Shin, B. Javidi	143
6.1 Introduction	143
6.2 Speckle Reduced Three-Dimensional Display System Using Volume Holography and Integral Imaging	144
6.2.1 Integral Imaging by Use of Volume Holography	144
6.2.2 Speckle-Reduced Reconstruction	150
6.2.3 Experimental Results	151
6.2.4 3-D Video System Using Integral Imaging and Volume Holography	152
6.3 Three-Dimensional Object Recognition by Using Photorefractive Volume Holographic Processor	155
6.3.1 Introduction	155
6.3.2 3-D Object Recognition by Using Volume Holography	155
6.3.3 Experiment	158
6.4 3-D Object Recognition Using Integral Imaging and Volume Holography	160
6.5 Summary	163
References	163

Part II Signal Processing, Coding, and Applications

7 Stereoscopic Video Compression Standard “MPEG-2 Multi-view Profile”

H. Imaizumi, A. Luthra	167
7.1 Introduction	167
7.2 Overview of the MPEG-2 Video Coding-Algorithm	168
7.2.1 Interlaced Video	168
7.2.2 Bidirectional Prediction	169
7.2.3 Picture Coding Type	169
7.2.4 Picture Structure	170
7.2.5 Predictions for Frame Pictures	171
7.2.6 Predictions for Field Pictures	172
7.2.7 Field/Frame Adaptive DCT	172
7.3 Coding Algorithm for MPEG-2 Multiview Profile	173
7.3.1 Compatibility of the Multiview Profile with the Main Profile	174
7.3.2 Predictions for the Multiview Profile	175

7.4	Camera Parameters.....	176
7.5	Verification Test for Standardization for the Multiview Profile....	176
7.5.1	Bitstream Exchange	177
7.5.2	Test Conditions for the Subjective Assessment	177
7.5.3	Results of the Subjective Assessment Tests	179
7.6	Conclusions.....	180
7.7	Acknowledgements	180
	References	181
 8 The Ray-Based Approach		
to Integrated 3-D Visual Communication		
	T. Naemura, H. Harashima.....	183
8.1	Introduction	183
8.2	Spatial Representation by Ray Data	185
8.2.1	Representing 3-D Spatial Information by Ray Data	185
8.2.2	Spatial Representation Independent of Boundary-Surface Shape	188
8.2.3	Overview of Spatial Representation System	190
8.3	Construction of a Real-Time System	191
8.3.1	Transformation of the Planar-Recording Method	191
8.3.2	Real-Time Interpolation of Light Rays	192
8.3.3	Approximation Error	194
8.3.4	System Configuration	195
8.3.5	Experimental Results	195
8.3.6	Further Investigation	198
8.4	Acquisition of Dense Data Space Utilizing Integral Photography	200
8.4.1	Using a Real-Time IP System	200
8.4.2	Experimental Results	201
8.5	Compression of Ray Data	202
8.5.1	4-D Discrete Cosine Transform	202
8.5.2	Improving Compression Efficiency by Redefining the Boundary Surface	203
8.5.3	Virtual Object Surface	203
8.5.4	Experimental Results	204
8.6	Sampling Ray Data by a Telecentric Lens	207
8.6.1	Capturing Orthogonal Projection Images	207
8.6.2	Synthesis of Perspective Views	208
8.7	Conclusions.....	208
	References	209

9 Information Flow in Streaming 3-D Video

D.J. Brady, S. Feller, D. Kammeyer, E. Cull, L. Fernandes, R. Stack, R. Brady	213
9.1 Introduction	213
9.2 Argus Hardware	216
9.3 Algorithms	218
9.4 Performance	222
9.5 Conclusions	223
9.6 Acknowledgements	224
References	225

10 Three-Dimensional Image Capturing and Representation for Multimedia Ambiance Communication

T. Ichikawa, S. Iwasawa, K. Yamada, T. Kanamaru, T. Naemura, K. Aizawa, S. Morishima, T. Saito	227
10.1 Multimedia Ambiance Communication	227
10.2 3-D Image Space with Three Layers	228
10.3 Immersive Environment for Ambiance Communication	228
10.3.1 Configuration of a 3-D Image Space Display Unit	228
10.3.2 Use of a Computer for Creating and Displaying a 3-D Image Space	229
10.3.3 Video Camera System Design for Capturing the Images of the Ambient Environment	230
10.4 Expression for 3-D Image Space	231
10.4.1 Two-Plane Expression for Image Space Consisting of Long-Range View and the Ground or the Surface of a Body of Water	231
10.4.2 Setting Representation for Mid-range Views	232
10.5 Expression for a Lifelike Avatar	234
10.6 Construction of 3-D Image Space	236
10.7 Conclusions	238
References	238

11 Three-Dimensional Display and Recognition System Based on Multiple Perspectives Integral Imaging

O. Matoba, E. Tajahurece, B. Javidi	241
11.1 Introduction	241
11.2 Three-Dimensional Display Based on Integral Imaging	242
11.3 Three-Dimensional Object Recognition System Based on Integral Imaging	244
11.3.1 System	244
11.3.2 Numerical and Experimental Results	250
11.4 Conclusions	254
References	255

12 Imaging Architectures with Volume Holographic Elements

G. Barbastathis	257
12.1 Introduction	257
12.2 Field- and Intensity-Transforming Imaging Systems	258
12.3 Holography in Imaging	261
12.4 Volume Diffraction Theory	263
12.5 Volume Holographic Imaging in the 90°-Geometry	264
12.5.1 Optical Slicing Through Bragg Mismatch	264
12.5.2 Holographic Degeneracies and Spatio-Spectral Tomography	267
12.5.3 Point-Spread Function and Resolution of Volume Holographic Imaging	268
12.6 Conclusions	270
References	270

**13 Compression of Digital Holograms
for Three-Dimensional Video**

T.J. Naughton, Y. Frauel, O. Matoba, B. Javidi, E. Tajahuerce	273
13.1 Introduction	273
13.2 Phase-Shift Digital Holography	275
13.3 Lossless Holographic Data Compression	277
13.3.1 Huffman Coding	277
13.3.2 LZ77	278
13.3.3 LZ78/LZW	278
13.3.4 Lossless Compression Results	279
13.3.5 Intermediate Coding	280
13.3.6 Lossless and Lossy Image Compression	281
13.4 Compression by Resampling	281
13.5 Quantization	285
13.6 DFT-Based Compression	288
13.7 Phase-Only Digital Hologram	290
13.8 Conclusions	293
References	294

14 Three-Dimensional Image Security

B. Javidi, E. Tajahuerce, O. Matoba	297
14.1 Introduction	297
14.2 Three-Dimensional Object Encryption With Digital Holography	299
14.3 Key Recording and Decryption of the Digital Hologram	302
14.4 Digital Reconstruction of the 3-D Object	304
14.5 Optical Reconstruction	309
14.6 Conclusions	312
14.7 Acknowledgments	312
References	313

15 3-D Display and Interaction Technologies for Desktop Computing

S. Pastoor, J. Liu	315
15.1 Need for a Next-Generation Human–Computer Interface	315
15.2 Multimodal Human–Computer Interaction	318
15.2.1 Toward Perceptual User Interfaces	320
15.2.2 Use of Auditory and Haptic Output at the Interface	324
15.2.3 Multimodal Input	326
15.3 MUltimo3-D: a Testbed for a Multimodal 3-D PC	330
15.3.1 Concept of the mUltimo3-D User Interface	330
15.3.2 Implemented Operating System and Interface Agents	333
15.3.3 3-D Display	334
15.3.4 Input Devices for the Perceptual User Interface	338
15.3.5 Trial Applications	345
15.4 System Evaluation with Users	346
15.5 Conclusions and Future Work	349
15.6 Acknowledgements	351
References	351

Part III Psychological Visual Science

16 The Influence of Optical Distortions and Transverse Chromatic Aberration on Motion Parallax and Stereopsis in Natural and Artificial Environments

J. Faubert	359
16.1 Introduction	359
16.2 What is Motion Parallax?	359
16.3 How Efficient is Motion Parallax?	361
16.3.1 Motion Parallax Versus Binocular Disparity (Stereoscopy) .	361
16.3.2 Motion Parallax in Monocular Individuals Versus Stereoscopy in Binocular Individuals	362
16.4 Interactions Between Motion Parallax and Stereoscopy	363
16.5 Optical Distortions and Motion Parallax	367
16.6 Binocular Interactions With Progressive Lenses	372
16.7 Natural and Lens-Induced Transverse Chromatic Aberration, Stereopsis, and Motion Parallax	376
16.7.1 What is Transverse Chromatic Aberration?	376
16.7.2 Consequences of TCA on Visual Performance	379
16.7.3 TCA and Stereopsis	379
16.7.4 Why Are Such Illustrations Important to Understand When We Actually See or Do Not See Color Depth Effects?	381

16.8 Seeing Depth with Black and White and Only One Other Color	384
16.9 TCA and Motion Parallax	389
16.10 Effect of TCA on Color-Defined Motion	389
16.10.1 Higher Spatial Frequency Effects	391
16.11 Conclusions	393
References	395
 17 Depth Perception of Moving Objects	
S. Shioiri, A. Morinaga, H. Yaguchi	397
17.1 Introduction	397
17.2 Spatio-Temporal Characteristics of Stereopsis	397
17.2.1 Depth Modulation in Space and in Time	397
17.2.2 Luminance Modulation in Space and in Time	401
17.3 Motion Influence on Depth Perception	404
17.3.1 Disparity Contingent Motion Aftereffect	405
17.3.2 Cells in Monkey MT	405
17.3.3 Motion Processing Independently From Disparity	406
17.3.4 Effect of Motion on Depth Discrimination	408
17.4 Perception of Motion in Depth	413
17.4.1 Cues for Motion in Depth	413
17.4.2 Binocular Motion Cues for Motion in Depth	417
17.5 Conclusions	425
17.6 Acknowledgments	426
References	426
 18 Visual Perception of Stereoscopic Images at the Point of Binocular Fusion	
S. Yano	429
18.1 Introduction	429
18.2 Binocular Stereoscopic Images	429
18.2.1 Perception of Binocular Stereoscopic Images	429
18.2.2 Visual Perception in the Depth Direction	432
18.3 The Limits of Binocular Fusion	434
18.3.1 The Limits of Binocular Fusion in Terms of Spatial Frequency and Velocity of Movement	434
18.3.2 Temporal Frequency Characteristics of Stereoscopic Vision	438
18.3.3 Relationship Between Display Size and Binocular Fusion ..	441
18.4 Accommodation Function and Depth of Focus	445
18.4.1 Depth of Focus and the Effect of Pupil Size	445
18.4.2 Display Area of Stereoscopic Images	445
18.5 Evaluation of Stereoscopic Images	449
18.5.1 Approach to the Evaluation Method for Stereoscopic Images	449

XVIII Contents

18.5.2 Experimental Equipment and Method.....	449
18.5.3 Experimental Results and Discussion on the Change of the Accommodation Response	451
18.5.4 Results of Subjective Estimation Experiments.....	454
18.5.5 Relationship Between Viewing Distance and Depth of Focus.....	457
18.6 Conclusions.....	457
References	459
 19 A Display System for Natural Viewing of 3-D Images	
T. Honda, Y. Kajiki, K. Susami, T. Hamaguchi, T. Endo, T. Hatada, T. Fujii	461
19.1 Introduction	461
19.2 Super-Multiview Concept.....	461
19.2.1 Conventional 3-D Display Systems.....	461
19.2.2 Multiview Stereo Display System	462
19.2.3 Super-Multiview Region of Stereogram	463
19.3 Satisfying the Super-Multiview Condition	465
19.3.1 Focused Light-Source Array Display Method	465
19.3.2 Cylindrical Display System	469
19.4 Video Image Capture and Processing for the 3-D Display	474
19.4.1 View Interpolation Technology	474
19.4.2 3-D Video Capturing and Data Processing System	476
19.5 Visual Condition of Human Eyes in 3-D Image Observation	480
19.5.1 Ocular Vergence and Accommodation to Super-multiview Stereoscopic Images	480
19.5.2 Methods	482
19.5.3 Results and Discussion	483
19.6 Concluding Remarks.....	486
References	487
Index	489

Three-Dimensional Television, Video, and Display
Technologies

Javidi, B.; Okano, F. (Eds.)

2002, XXIII, 496 p., Hardcover
