Part 1: Fluorescence Spectroscopy: New Approaches and Probes

1 Advanced Luminescent Labels, Probes and Beads and their Application to Luminescence Bioassay and Imaging	3
O. S. WOLFBEIS, M. BÖHMER, A. DÜRKOP, J. ENDERLEIN, M. GRUBER, I. KLIMANT, C. KRAUSE, J. KÜRNER, G. LIEBSCH, Z. LIN, B. OSWALD, AND M. WU	
1.1 Introduction	4
1.2 A General Logic for Designing Fluorescent Cyanine Type Probes and Labels of Defined Color	6
1.3 Diode Laser-excitable Probes for General Protein Detection.....	8
1.4 Diode Laser-compatible Amino-Reactive Covalent Labels	10
1.5 Diode Laser-assisted Fluorescent Single Molecule Detection of Dyes and Labeled Proteins.....	11
1.6 New Labels for Flow Cytometric Determination of HSA	14
1.7 Diode Laser-excitable DNA Labels	15
1.8 New Resonance Energy Transfer Gene Assays.....	16
1.9 Reactive Ruthenium Ligand Complexes as Markers for Bioassays	17
1.10 Diode Laser-excitable Fluorescent Polymer Beads	18
1.11 Polyaniline-Coated Nano-beads (~200 nm in Diameter) with pH-dependent Fluorescence	20
1.12 Phosphorescent Poly(acrylonitrile) Nanospheres (10–100 nm in Ø) as Markers for Optical Assays.....	22
1.13 Competitive Binding of Streptavidin to Biotinylated Nanobeads as Studied by Resonance Energy Transfer	25
1.14 Nanobeads as Reference Dyes in Luminescent Lifetime Imaging Using DLR	27
1.15 Phosphorescent Nanospheres for Use in Advanced Time-resolved Multiplexed Bioassays (λ , τ).....	30
1.16 Beads Dyed with a Europium-based Label and Excitable with the 405-nm LED Diode Laser	34
1.17 A Europium(III)-based Probe for Use in Oxidase-Associated Reactions	35
1.17.1 Significance of Probes for Hydrogen Peroxide (HP)	35
1.17.2 A New Probe for Hydrogen Peroxide	35
1.17.3 Glucose Assay Using the Europium Probe	36
1.17.4 Peroxidase Assay Using the Europium Probe	37
1.17.5 Catalase	38
1.17.6 A New Enzyme-linked Immunosorbent Assay (ELISA)	38
References	40

Part 3 Application of Fluorescence in Biological Membrane and Enzyme Studies

12 Application of the Wavelength-selective Fluorescence Approach to Monitor Membrane Organization and Dynamics	211
A. CHATTOPADHYAY	
12.1 Introduction	212
12.2 Red Edge Excitation Shift (REES)	212
12.3 The Wavelength-selective Fluorescence Approach	214
12.4 The Wavelength-selective Fluorescence Approach: A Novel Tool to Monitor Organization and Dynamics of the Membrane Interfacial Region	214
12.5 Wavelength-selective Fluorescence as a Membrane Dipstick	217
12.6 Application of the Wavelength-selective Fluorescence Approach to Membrane Peptides and Proteins	218
12.7 Wavelength-selective Fluorescence in Micelles	220
12.8 Conclusions	221
References	221
13 Fluorescence Approaches for the Characterization of the Peripheral Membrane Binding of Proteins Applied for the Blood Coagulation Protein Prothrombin	225
R. HUTTERER AND M. HOF	
13.1 Introduction	226
13.2 Prothrombin Binding to Negatively Charged Membrane Surface Characterized by Protein Fluorescence	227
13.2.1 Intrinsic Protein Fluorescence: Picosecond Tryptophan Fluorescence of Membrane-bound Prothrombin Fragment 1 (F1)	227
13.2.2 Overview on Investigations Applying Fluorescently Labeled Prothrombin	231
13.3 Prothrombin-induced Changes in the Organization of Phospholipid Bilayers	233
13.3.1 Solvent Relaxation (SR)	233
13.3.1.1 Solvent Relaxation Probed by the Headgroup Labels Prodan and Patman	233
13.3.1.2 Influence of Prothrombin and its Fragment 1 on the Phospholipid Headgroup Organization	235
13.3.2 Fluorescence Anisotropy: Influence of Prothrombin and its Fragment 1 on PC/PS Membrane Order	237

13.3.3 Pyrene Fluorescence: Influence of Fragment 1 on Membrane Order Monitored by the Excimer/Monomer Ratio.....	237
13.4 Conclusions	238
References	239
14 Assessment of Membrane Fluidity in Individual Yeast Cells by Laurdan Generalised Polarisation and Multi-photon Scanning Fluorescence Microscopy	241
R. P. LEARMONTH AND E. GRATTON	
14.1 Introduction	242
14.1.1 Yeast Membrane Fluidity.....	242
14.1.2 Multi-photon Scanning Fluorescence Microscopy	243
14.1.3 Determination of Membrane Fluidity Using Laurdan Generalized Polarization	244
14.2 Materials and Methods	244
14.3 Results and Discussion	246
14.4 Conclusions	250
References	251
15 Formation of Higher Order Signal Transduction Complexes as Seen by Fluorescence Spectroscopy	253
L. DOWAL AND S. SCARLATA	
15.1 Introduction	254
15.2 Experimental	256
15.2.1 Membrane Binding	257
15.2.2 Interactions of PLC β and G Protein Subunits on Membrane Surface	257
15.2.3 PLC β_2 -G $\beta\gamma$ Associations on Membrane Surfaces.....	258
15.2.4 Effects of Lipid Rafts on Protein Association.....	259
References	260
16 Mechanisms of the Modulation of Membrane Interfacial Enzyme Catalysis by Non-lamellar Forming Lipids: Comparison with the Behavior of a Fluorescent Probe in Membranes	263
R. M. EPAND, R. CORNELL, S. M.A. DAVIES, AND R. KRAAYENHOF	
16.1 Introduction	264
16.1.1 Specific vs. Non-specific Modulation of Protein Activity	264
16.1.2 Non-lamellar Forming Lipids	265
16.2 Specific Protein Examples	266
16.2.1 Protein Kinase C	266
16.2.2 Phosphocholine Cytidyltransferase	267
16.3 Molecular Mechanisms of Enzyme Activation by Non-lamellar Forming Lipids.....	268
16.3.1 Curvature Strain	268
16.3.2 Lateral Pressure Profile	269
16.3.3 Other Mechanisms	269

16.4 Criteria for the Role of Membrane Curvature Strain	269
16.4.1 Cubic Phases	269
16.4.2 Homologous Lipids	271
16.5 Relationship of the Properties of a Fluorescent Interfacial Membrane Probe	271
16.6 Comparison of the Mechanisms of Activation of PKC and CT by Non-lamellar Forming Lipids	272
16.7 Conclusions	273
References	274
 17 Emission Spectroscopy of Complex Formation between <i>Escherichia coli</i> Purine Nucleoside Phosphorylase (PNP) and Identified Tautomeric Species of Formycin Inhibitors Resolves Ambiguities Found in Crystallographic Studies.....	277
B. KIERDASZUK	
17.1 Introduction	278
17.2 Formycin A and its <i>N</i> -methyl Analogs, Specific Inhibitors of <i>E. coli</i> PNP	280
17.3 Ambiguities Found in the Crystallographic Structure of Enzyme– Ligand Complex	281
17.4 Solution Structure of Inhibitors Bound by the Enzyme.....	283
17.4.1 Tautomeric Equilibria, and Absorption and Emission Spectra of the Tautomeric Species in Solution	283
17.4.2 Shifts Between Absorption and Emission Spectra of the Enzyme and Ligands	286
17.4.3 Effect of Binding of the Identified Tautomeric Species on their Fluorescence and Phosphorescence	287
17.5 Conclusions	291
References	292
 Part 4 Microscopic Imaging Techniques and their Application for the Study of Living Cells
