|--|----|
| Introduction | 1 |
| 1. Fluid Dynamic Limits of the Boltzmann Equation | 11 |
| 1.1 The Boltzmann Equation | 11 |
| 1.2 The Fluid Dynamic Limits | 12 |
| 1.2.1 Hilbert Expansion | 15 |
| 1.2.2 The Entropy Approach | 17 |
| 1.2.3 Some Complementary Remarks | 18 |
| 1.3 Comments | 20 |
| 2. From Classical Continuum Theory to Euler Equations via N–S–F Equations | 25 |
| 2.1 Newtonian Fluids | 25 |
| 2.1.1 Rate of Strain and Stress Tensors | 27 |
| 2.1.2 Constitutive Relations for a Newtonian Fluid | 27 |
| 2.1.3 Equations of State: Perfect Gas and Expansible Liquid | 29 |
| 2.2 Partial Differential Equations for the Motion of Any Continuum | 31 |
| 2.3 N–S–F Equations | 32 |
| 2.3.1 For a Perfect Gas | 32 |
| 2.3.2 For an Expansible Liquid | 33 |
| 2.4 Dimensionless N–S–F Equations | 34 |
| 2.4.1 Nondimensional Form of the N–S–F Equations for a Perfect Gas | 34 |
| 3. A Short Presentation of Asymptotic Methods and Modelling | 37 |
| 3.1 Method of Strained Coordinates | 39 |
| 3.2 Method of Matched Asymptotic Expansions | 39 |
| 3.3 Multiple Scale Method | 42 |
| 3.3.1 Homogenization Method | 43 |
| 3.4 Flow with Variable Viscosity: An Asymptotic Model | 44 |
| 3.4.1 The Associated Three Limiting Processes | 46 |
| 3.4.2 Interaction Between the BL and the LVL | 48 |

| | | |
|-----------|--|------------|
| 3.5 | Low Mach Number Flows: Weakly Nonlinear Acoustic Waves | 49 |
| 3.5.1 | Steichen Equation for an Eulerian Irrotational Flow .. | 49 |
| 3.5.2 | Unsteady-State One-Dimensional Case | 50 |
| 3.5.3 | Burgers Equation for the Far Field in the Dissipative Case | 54 |
| 4. | Various Forms of Euler Equations and Some Hydro-Aerodynamics Problems | 61 |
| 4.1 | Barotropic Inviscid Fluid Flow | 61 |
| 4.2 | Bernoulli Equation and Potential Flows | 63 |
| 4.3 | D'Alembert Paradox and Kutta–Joukowski–Villat Condition . | 64 |
| 4.3.1 | More Concerning the K–J–V Condition | 67 |
| 4.4 | Potential Flows and Water Waves | 73 |
| 4.4.1 | Formulation of the Water-Wave Problem | 74 |
| 4.4.2 | From Cauchy and Poisson to Airy and Stokes | 75 |
| 4.4.3 | Boussinesq and KdV Equations | 76 |
| 4.4.4 | Soliton Dynamics, KP, NLS, and NLS–Poisson Equations | 77 |
| 4.5 | Compressible Eulerian Baroclinic Fluid Flow | 82 |
| 4.5.1 | Lagrangian Invariants | 83 |
| 4.5.2 | Clebsch's and Weber's Transformations. Hamiltonian Form and Cauchy's Integral | 87 |
| 4.5.3 | Vector Field Frozen into the Medium and Fridman's Theorem | 90 |
| 4.5.4 | A Variational Principle | 92 |
| 4.5.5 | The Formation of Vortices and Bjerknes' Theorem | 94 |
| 4.5.6 | Various Forms of Euler Equations | 96 |
| 4.6 | Isochoric Fluid Flows | 101 |
| 4.6.1 | From Isochoric Fluid Flow to Incompressible Fluid Flow | 102 |
| 4.6.2 | Unsteady-State 2-D Case | 103 |
| 4.6.3 | Steady-State 2-D Case | 104 |
| 4.6.4 | Weakly Nonlinear Long Internal Waves in Stratified Flows | 108 |
| 4.7 | Isentropic Fluid Flow and the Steichen Equation | 110 |
| 4.7.1 | Isentropic Euler Equations | 111 |
| 4.7.2 | The Steichen Equation for the Velocity Potential | 112 |
| 4.8 | Steady Euler Equations and Stream Functions | 120 |
| 4.8.1 | 2-D Case | 121 |
| 4.8.2 | 3-D Adiabatic Steady-State Flows | 127 |
| 5. | Atmospheric Flow Equations and Lee Waves | 131 |
| 5.1 | Euler Equations for Atmospheric Motions | 131 |
| 5.1.1 | Generalisation of the Bjerknes' Theorem. Influence of the Coriolis Acceleration | 133 |

| | | |
|-----------|--|------------|
| 5.2 | The Meteorological “Primitive” Kibel Equations..... | 134 |
| 5.2.1 | The f^0 -Plane Approximation | 134 |
| 5.2.2 | The Primitive (Kibel) Equations | 137 |
| 5.2.3 | The Quasi-Geostrophic Model Equation | 141 |
| 5.2.4 | Adjustment to Geostrophy. Formulation of the Initial Condition for the QG Equation (5.49) ... | 143 |
| 5.3 | The Boussinesq Inviscid Equations..... | 146 |
| 5.3.1 | The Standard Atmosphere..... | 146 |
| 5.3.2 | Asymptotic Derivation of Inviscid Boussinesq Equations | 148 |
| 5.3.3 | Steady Boussinesq Case | 154 |
| 5.3.4 | From Isochoric Equations to Boussinesq Equations ... | 160 |
| 5.4 | Isochoric Lee Waves | 161 |
| 5.4.1 | Steady-State 2-D Model Problems | 161 |
| 5.4.2 | Isochoric 2-D Steady-State Lee Waves..... | 163 |
| 5.5 | Boussinesq Lee Waves..... | 166 |
| 6. | Low Mach Number Flow and Acoustics Equations | 171 |
| 6.1 | Euler Incompressible Limit Equations | 171 |
| 6.1.1 | Equation for the Temperature Perturbation..... | 173 |
| 6.2 | Equations of Acoustics | 173 |
| 6.2.1 | External Aerodynamics | 173 |
| 6.2.2 | Internal Aerodynamics | 174 |
| 6.2.3 | The Singular Nature of the Far Field | 178 |
| 7. | Turbo-Machinery Fluid Flow | 185 |
| 7.1 | Various Facets of an Asymptotic Theory | 186 |
| 7.2 | Through-Flow Model | 189 |
| 7.3 | Flow Analysis at the Leading/Trailing Edges of a Row | 193 |
| 7.4 | Complementary Remarks | 194 |
| 7.4.1 | A Simple “Two-Stream Function” Approach | 199 |
| 8. | Vortex Sheets and Shock Layer Phenomena | 203 |
| 8.1 | The Concept of Discontinuity | 203 |
| 8.1.1 | Entropy and Vorticity Introduced Behind a Shock ... | 204 |
| 8.2 | Jump Relations Associated with a Conservation Law..... | 207 |
| 8.2.1 | Normal Shock..... | 208 |
| 8.2.2 | Oblique Shock | 210 |
| 8.3 | The Structure of the Shock Layer..... | 215 |
| 8.3.1 | A Simple Description of the Structure of the Taylor Shock Layer | 217 |
| 8.4 | Some Properties of the Vortex Sheet | 221 |
| 8.4.1 | The Guiraud–Zeytounian “Rolled-Up Vortex Sheet” Theory | 224 |

| | |
|---|-----|
| 9. Rigorous Mathematical Results | 231 |
| 9.1 Well-Posedness of Eulerian Fluid Flows | 232 |
| 9.1.1 The Well-Posedness of Eulerian Incompressible Fluid Flow | 236 |
| 9.1.2 The Well-Posedness of Eulerian Compressible Fluid Flow | 242 |
| 9.1.3 Solvability of Eulerian Fluid Flow | 245 |
| 9.1.4 The Cauchy–Kowalevski Theorem | 253 |
| 9.1.5 Stability–Instability Concept | 258 |
| 9.2 Existence, Regularity, and Uniqueness Results | 271 |
| 9.2.1 Water Waves and Solitary Waves | 274 |
| 9.2.2 Motion of a Compressible Inviscid Fluid | 274 |
| 9.2.3 The Incompressible Limit of Compressible Euler Equations | 276 |
| 9.2.4 More Recent Rigorous Results | 277 |
| References | 281 |
