Roles of SCF and VHL Ubiquitin Ligases in Regulation of Cell Growth

Takumi Kamura, Joan W. Conaway, and Ronald C. Conaway

1	Introduction	1
2	Architectures of the SCF and VHL E3 Ubiquitin Ligases	2
2.1	The Cullin Proteins	3
2.2	The RING Finger Protein Rbx1	4
3	Targets of the SCF Ubiquitin Ligase	4
3.1	The <i>S. cerevisiae</i> SCF ^{Cdc4} Complex	4
3.2	The <i>S. cerevisiae</i> SCF ^{Grr1} Complex	5
3.3	The <i>S. cerevisiae</i> SCF ^{Met30} Complex	6
3.4	The Mammalian SCF ^{Skp2} Complex	6
3.5	The Mammalian SCF ^{β-TRCP} Complex	7
4	The von Hippel–Lindau Ubiquitin Ligase	7
4.1	The VHL Tumor Suppressor Protein	7
4.2	Hypoxia-Inducible Transcription Factors Are Targets of the VHL Ubiquitin Ligase	8
5	Regulation of SCF and VHL Ubiquitin Ligase Activities	9
5.1	Stimulation of SCF and VHL Ubiquitin Ligase Activities by NEDD8 Modification of Cullin Proteins	9
5.2	Autocatalytic Ubiquitylation and Degradation of F-box Proteins	9
	References	10

Aging of Proteins and the Proteasome

Bertrand Friguet

1	Introduction	17
2	Proteins: Cellular Targets for Oxidative Damage	18
3	Proteins: Cellular Targets for Other Damaging Processes	21
4	Oxidized Proteins Degradation by the Proteasome	22
5	Proteasome and Oxidative Stress	24
6	Proteasome and Aging	25
	References	28

Protein Degradation in the Aging Organism

Walter F. Ward

1	Introduction	35
2	Pathways of Protein Degradation and How They Are Affected by Age	36
2.1	The Heterophagic Pathway of Protein Degradation	36
2.2	Pathways of Autophagic Protein Degradation	37
2.2.1	Macroautophagy	37
2.2.2	Microautophagy	38
2.2.3	Chaperone-Mediated Autophagy	38
2.2.4	Crinophagy	39
3	Cytosolic Pathways of Protein Degradation	39
3.1	The Proteasome	39
3.2	The Calpains	40
4	Summary	41
	References	41

Protein Degradation in Alzheimer's Disease and Aging of the Brain

Teruyuki Tsuji and Shun Shimohama

1	Introduction	43
2	Amyloid and Presenilin	44
3	PS Mutant Activity	44
3.1	Proteolytic Maturation of PS	45
3.2	The Role of PS in A β Metabolism	46
4	Tau Phosphorylation and Filamentous Aggregation	47
4.1	Tau Protein in AD	48
5	Alpha-Synuclein in Lewy Body Disease	49
6	Ubiquitin	50
6.1	Ubiquitin and AD	52
6.2	Ubiquitin and PD	53
7	Calpain and AD	54
8	Other Protein Degradation Mechanisms and Future Directions	55
	References	56

Protein Degradation in Human Disease

Richard K. Plemper and Anthea L. Hammond

1	Introduction	61
2	The Ubiquitin-Proteasome Degradation System	61
2.1	Diseases Associated with the Ubiquitin- Proteasome Pathway	67
2.1.1	Neurological Disorders	67
2.1.2	Malignancies	72

2.1.3	Metabolic Disorders	73
2.1.4	Viral Escape from Immune Surveillance	76
3	Lysosomal Degradation	78
	References	79

The 26S Proteasome

Olivier Coux

1	Introduction	85
2	The Ub-Proteasome Pathway	87
3	The 26S Proteasome, a Multi-enzymatic Degradation Machine	89
3.1	Enzymatic Activities of the 26S Proteasome	89
3.1.1	Proteolytic Activities	89
3.1.2	Roles of the ATPases of the 19S Complex	92
3.1.2.1	Channel Opening	93
3.1.2.2	Substrate Unfolding	94
3.1.2.3	Substrate Translocation into the 20S Proteasome	95
3.1.3	Release from the Poly-Ub Chain and Ub Recycling	96
3.2	Assembly of the 26S Proteasome	97
3.3	Substrate Recognition	99
4	Perspectives	101
	References	101

Proteasome Inhibitors

Michèle Reboud-Ravaux

1	Introduction	109
2	Molecular and Mechanistic Bases for Design	109
2.1	Crystallographic Structures of Inhibitor- Proteasome Complexes	109
2.2	Mechanism of Peptide Hydrolysis	110
2.3	High Molecular Weight Inhibitors	111
3	Low Molecular Weight Inhibitors of the Proteasome	112
3.1	Stable Acyl-Enzymes	112
3.1.1	DCI	112
3.1.2	Lactacystin	112
3.2	Transition State Analogs	113
3.2.1	Peptide Aldehydes	114
3.2.2	Peptide Boronic Acids	114
3.3	Suicide Substrates	115
3.4	Non-covalent Inhibitors	117
3.5	Remarks	117
4	Towards Therapeutic Applications	118
4.1	Inflammation	118
4.2	Various Cancers	118

4.2.1	Immune Diseases	119
4.2.2	Muscle Wasting	119
4.2.3	Miscellaneous	119
5	Conclusion	120
	References	120
