## Introduction

<i>Baruch S. Blumberg</i> .....	1
---------------------------------	---

---

## Part I Organic Material in Space and Habitable Zones

---

### 1 From Molecular Clouds to the Origin of Life

<i>Pascale Ehrenfreund and Karl M. Menten</i> .....	7
---	---

1.1 The Search for Large Organic Molecules in Dense Clouds .....	10
1.1.1 The Search for Amino Acids in the Interstellar Medium .....	10
1.1.2 Organic Molecules in our Galactic Center .....	11
1.2 Molecules in Protoplanetary Disks .....	13
1.3 Diffuse Interstellar Clouds .....	14
1.4 The Evolution of Organic Molecules During Solar System Formation .....	15
1.4.1 Comets .....	16
1.4.2 Meteorites .....	17
1.5 Implications for the Origin of Life on Earth .....	17
1.6 Conclusions .....	20
1.7 References .....	21

### 2 The Diversity of Extrasolar Planets Around Solar-Type Stars

<i>Stéphane Udry and Michel Mayor</i> .....	25
---	----

2.1 Detections: Milestones and Recent Announcements .....	26
2.2 Very Recent ELODIE and CORALIE Detections .....	29
2.3 Observed Properties of Extrasolar Planets .....	31
2.4 Hot Jupiters .....	32
2.4.1 Hot Jupiters: Direct Detections .....	33
2.5 The Mass Function of Substellar Companions .....	35
2.6 Orbital Element Distributions: Traces of Planet Formation .....	36
2.6.1 The Distribution of Periods .....	37
2.6.2 The Distribution of Eccentricities .....	37
2.7 Metal Enrichment of Stars Bearing Planets .....	39
2.8 Summary and Future Perspectives .....	40
2.9 References .....	43

**3 Habitable Zones in Extrasolar Planetary Systems**

*Siegfried Franck, Werner von Bloh, Christine Bounama, Matthias Steffen,  
Detlef Schönberger and Hans-Joachim Schellnhuber*.....47

3.1 Models for Calculating the HZ in the Solar System .....	49
3.2 HZ Around Other Main Sequence Stars .....	51
3.3 Conclusions .....	54
3.4 References .....	55

**4 Viable Transfer of Microorganisms in the Solar System and Beyond**

*Gerda Horneck, Curt Mileikowsky, H. Jay Melosh, John W. Wilson,  
Francis A. Cucinotta and Brett Gladman*..... 57

4.1 Scenario of Interplanetary Transfer of Life Within the Solar System .....	57
4.2 Survival of the Escape Process .....	59
4.3 Survival of the Interplanetary Transfer Phase.....	60
4.3.1 Space Environment of Interest .....	60
4.3.2 Approaches to Studying the Biological Effects of Space.....	62
4.3.3 Biological Effects of the Vacuum of Space .....	63
4.3.4 Biological Effects of Galactic Cosmic Radiation .....	64
4.3.5 Biological Effects of Extraterrestrial Solar UV Radiation .....	67
4.3.6 Bacterial Survival During Long-Term Dormancy.....	67
4.3.7 Combined Effects of the Complex Matrix of Space Parameters .....	68
4.4 Survival of the Landing Process .....	69
4.5 Conclusions: On the Likelihood of Interplanetary Transfer of Life as a Mode of Distribution of Life Throughout the Solar System .....	69
4.6 Outlook: On the Likelihood of Transport of Viable Microorganisms Between Solar Systems. ....	71
4.7 References .....	74

---

**Part II Water and Life**

---

**5 Water, the Spring of Life**

*André Brack*..... 79

5.1 Water as a Diffusion Milieu .....	79
5.2 Water as a Selective Solvent.....	81
5.3 Water as a Clay Producer .....	82
5.4 Water Structures the Biopolymers .....	82
5.5 Water as a Driving Power for Chemistry.....	84
5.6 Water as a Heat Dissipator .....	85
5.7 Life Without Water: The Case for Titan.....	86
5.8 Conclusion.....	87
5.9 References .....	88

**6 Geomorphological Record of Water-Related Erosion on Mars***Ralf Jaumann, Ernst Hauber, Julia Lanz, Harald Hoffmann**and Gerhard Neukum* ..... 89

6.1	Outflow Channels .....	90
6.2	Valley Networks .....	91
6.3	Periglacial and Permafrost Landforms .....	94
6.3.1	Debris Flow and Terrain Softening .....	94
6.3.2	Ground Ice .....	95
6.3.3	Rampart Craters .....	95
6.3.4	Polygons .....	96
6.3.5	Thermokarst .....	96
6.4	Glacial Landforms .....	97
6.4.1	Eskers and Moraines .....	97
6.5	Volcano Ice Interactions .....	98
6.6	Chronology of Martian Erosional Processes .....	98
6.7	Standing Water .....	100
6.8	Origin of Martian Surface Erosion and Implications for the Palaeoclimate .....	101
6.9	References .....	106

**7 Europa's Crust and Ocean:****How Tides Create a Potentially Habitable Physical Setting***Richard Greenberg, B. Randall Tufts, Paul Geissler and Gregory V. Hoppa* ..... 111

7.1	Tidally Driven Geology and Geophysics .....	113
7.1.1	Tidal Heating .....	114
7.1.2	Tidally Driven Rotation .....	114
7.1.3	Tidal Stress on the Ice Crust .....	115
7.1.4	Chaotic Terrain .....	117
7.2	A Habitable Setting .....	118
7.3	References .....	122

**8 Permafrost Model of Extraterrestrial Habitat***David A. Gilichinsky* ..... 125

8.1	The Importance of Permafrost .....	125
8.2	Parameters of Permafrost Microbial Habitat .....	127
8.2.1	Temperature .....	127
8.2.2	Iceiness and Unfrozen Water .....	129
8.2.3	Ice and Permafrost as a Habitat .....	130
8.2.4	Gases and Supercooled Water .....	130
8.2.5	Age and Radiation .....	131
8.3	Biodiversity in Permafrost .....	135
8.4	How Long the Life Might Be Preserved .....	138
8.5	The Perspectives for Future Studies .....	138
8.6	References .....	140

<b>9 Microbial Life in Terrestrial Permafrost: Methanogenesis and Nitrification in Gelisols as Potentials for Exobiological Processes</b>	
<i>Dirk Wagner, Eva Spieck, Eberhard Bock and Eva-Maria Pfeiffer</i> .....	143
9.1 Permafrost Soils and Active Layer.....	143
9.2 Microbial Life under Extreme Conditions.....	145
9.3 Microbial Key Processes.....	145
9.3.1 Methanogenesis.....	148
9.3.2 Nitrification.....	148
9.4 Methods for Analogue Studies of Microbial Processes in Terrestrial and Extraterrestrial Habitats.....	149
9.4.1 Methanogenic and Nitrifying Populations.....	150
9.4.2 <i>In situ</i> Activity.....	152
9.4.3 Isotopic Analysis: Carbon Fractionation via Microbial Processes in Permafrost.....	154
9.4.4 Simulation Experiments.....	155
9.5 Conclusion and Future Perspectives.....	155
9.6 References.....	156
 <b>10 Life in Cold Lakes</b>	
<i>Erko Stackebrandt and Evelyne Brambilla</i> .....	161
10.1 Source of Samples and DNA Analyses.....	162
10.2 The Rich Diversity of Bacteria and Archaea.....	163
10.3 Conclusions.....	167
10.4 References.....	168
 <b>11 Hyperthermophilic Microorganisms</b>	
<i>Karl O. Stetter</i> .....	169
11.1 Biotopes of Hyperthermophiles.....	169
11.1.1 Terrestrial Biotopes.....	170
11.1.2 Marine Biotopes.....	171
11.2 Phylogeny of Hyperthermophiles.....	171
11.3 Taxonomy of Hyperthermophiles.....	174
11.4 Strategies of Life and Environmental Adaptations of Hyperthermophiles.....	174
11.4.1 General Metabolic Potentialities.....	174
11.4.2 Physiological Properties.....	175
11.5 Conclusions: Hyperthermophiles in the History of Life.....	182
11.6 References.....	183
 <b>12 Halophilic Microorganisms</b>	
<i>Hans Jörg Kunte, Hans G. Trüper and Helga Stan-Lotter</i> .....	185
12.1 Adaptation to Saline Environments.....	185
12.1.1 Salt-in-Cytoplasm Mechanism.....	186
12.1.2 Organic Osmolyte Mechanism.....	187
12.2 Saline Terrestrial Environments and Their Inhabitants.....	189
12.2.1 Distribution and Dating of Ancient Salt Sediments.....	190

12.2.2 Subterranean Halophilic Microorganisms and Their Relation to Surface Halophiles .....	191
12.2.3 Uncultivated Phylotypes .....	193
12.2.4 Distribution, Origin and Dispersal of Haloarchaea .....	193
12.2.5 Long-Term Survival .....	195
12.3 Relevance to Astrobiology .....	196
12.4 References .....	197

---

### Part III Electromagnetic Fields, Radiation and Life

---

#### 13 Martian Atmospheric Evolution:

##### Implications of an Ancient Intrinsic Magnetic Field

*Helmut Lammer, Willibald Stumptner and Gregorio J. Molina-Cuberos*..... 203

13.1 Nonthermal Atmospheric Escape Processes .....	204
13.1.1 Charge Exchange and Dissociative Recombination .....	204
13.1.2 Atmospheric Sputtering .....	206
13.1.3 Solar-Wind Interaction Processes .....	207
13.1.4 Ionospheric Bubbles .....	208
13.2 The Early Dense Martian Atmosphere .....	209
13.2.1 The Quest for Water .....	209
13.3 The Intrinsic Martian Magnetic Field .....	210
13.3.1 The Ancient Martian Magnetosphere: Constraints for Atmospheric Escape .....	212
13.4 Shielding of Hypothetical Primitive Martian Life Forms from Energetic Cosmic Particles and Radiation .....	213
13.4.1 Cosmic Ray Particle Fluxes on the Surface of Ancient Mars .....	213
13.5 Conclusions .....	216
13.6 References .....	216

#### 14 The Ultraviolet Radiation Environment of Earth and Mars:

##### Past and Present

*Charles S. Cockell*..... 219

14.1 UV Radiation on Early Earth .....	219
14.1.1 UV Radiation During the Archean .....	220
14.1.2 Biological Effects of High UV Radiation Flux .....	224
14.1.3 Beneficial Effects of High UV Radiation on Archean Earth? .....	227
14.2 The Ultraviolet History of Mars and Venus: An Exercise in Comparative Evolutionary Photobiology .....	228
14.3 Conclusions .....	230
14.4 References .....	230

#### 15 Ultraviolet Radiation in Planetary Atmospheres and Biological Implications

*Petra Rettberg and Lynn J. Rothschild*..... 233

15.1 Solar UV Radiation .....	233
-------------------------------	-----

15.2 Biological Effects of Solar UV Radiation .....	234
15.3 Biological UV Dosimetry .....	237
15.4 Experimental Determination of the Biological Effectiveness of Extraterrestrial Solar UV Radiation .....	239
15.5 Experimental Determination of the Photobiological Effects of Different Ozone Concentrations .....	241
15.6 Conclusions .....	241
15.7 References .....	243

## **16 Environmental UV Radiation:**

### **Biological Strategies for Protection and Avoidance**

<i>David D. Wynn-Williams and Howell G. M. Edwards</i> .....	245
16.1 Effects of UVR and Responses in Terrestrial Ecosystems .....	245
16.2 Techniques for Studying Microbes and Pigments <i>in situ</i> .....	246
16.2.1 Epifluorescence Microscopy .....	246
16.2.2 Raman Spectroscopy of Pigments and Other Compounds <i>in situ</i> .....	247
16.3 Screening Strategies .....	248
16.4 Quenching Strategies .....	250
16.5 Escape and Avoidance Strategies (Shade Adaptation) .....	250
16.5.1 Epilithic Lichens .....	250
16.5.2 Endolithic Communities .....	251
16.5.3 Stromatolites .....	254
16.6 Strategies for Extreme UV on Early Earth and Mars .....	255
16.7 Panspermia and UV Avoidance .....	256
16.8 Diagnosis of Key Pigments on Earth and Mars .....	256
16.9 References .....	258

## **17 Life under Conditions of Ionizing Radiation**

<i>Christa Baumstark-Khan and Rainer Facius</i> .....	261
17.1 Space Radiation Environments .....	261
17.1.1 Galactic Cosmic Radiation (GCR) .....	262
17.1.2 Solar Particle Radiation (SPR) .....	263
17.1.3 Radiation Belts in Planetary Magnetic Fields .....	263
17.1.4 Modulation by Planetary Magnetic Fields, Atmospheres and Surfaces .....	264
17.2 Radiation Environments on Planets and Other Celestial Bodies .....	264
17.2.1 Earth .....	265
17.2.2 Mars .....	265
17.2.3 Jupiter's Moon Europa .....	267
17.3 Measures of Ionizing Radiation .....	268
17.3.1 Physical Measures .....	268
17.3.2 Biologically Weighted Measures .....	269
17.4 Interaction of Radiation with Biological Material .....	269
17.4.1 Radiation Chemistry of Water .....	270
17.4.2 DNA Damage and Cellular Repair Pathways .....	272
17.5 Cellular Radiation Responses .....	275
17.5.1 Radiation Sensitivity of Organisms .....	276

17.5.2 Mutation Induction .....	277
17.5.3 Factors Influencing Cellular Radiation Effects .....	278
17.6 The Chances of Life Surviving Space Radiation Conditions .....	280
17.6.1 Interplanetary Transfer of Life .....	280
17.6.2 Putative Habitats on Other Planets .....	280
17.7 References .....	282

---

## Part IV Gravity and Life

---

### 18 Graviperception and Graviresponse at the Cellular Level

*Richard Bräucker, Augusto Cogoli and Ruth Hemmersbach*..... 287

18.1 Protists.....	287
18.1.1 Perception of Varied Acceleration .....	287
18.1.2 Models of Graviperception .....	289
18.1.3 Energy Considerations.....	291
18.1.4 Gravisensory Channels .....	292
18.2 Mammalian Cells.....	292
18.2.1 Gravity Effects and Consequences .....	292
18.3 Conclusions .....	294
18.4 References .....	294

### 19 Gravistimulated Effects in Plants

*Heide Schnabl*..... 297

19.1 Graviperception as the Primary Gravity-Sensing Mechanism .....	299
19.1.1 Graviperception in Unicellular Plants.....	299
19.1.2 Graviperception in Multicellular Plants .....	300
19.2 The Gravity Signal Transduction Pathway .....	303
19.3 The Graviresponse: The Curvature of Organs .....	304
19.3.1 Graviresponses in Unicellular Plants or Plant Systems .....	305
19.3.2 Graviresponses in Multicellular Plants .....	307
19.4 References .....	311

### 20 Gravitational Zoology: How Animals Use and Cope with Gravity

*Ralf H. Anken and Hinrich Rahmann*..... 315

20.1 Gravity as a Factor of Physical Restriction: A Brief History of Evolutionary Challenges To Surmount It .....	315
20.2 Gravity as a Cue for Orientation and Postural Control.....	318
20.2.1 Graviperception in Unicellular Animals.....	319
20.2.2 Graviperception in Multicellular Animals .....	320
20.3 Behavior and Differentiation of Animals at Altered Gravity.....	324
20.3.1 Invertebrates .....	325
20.3.2 Vertebrates.....	326
20.4 Conclusion.....	330
20.5 References .....	331

---

**Part V Complexity and Life**

---

**21 Scaling Phenomena and the Emergence of Complexity in Astrobiology***Juan Pérez-Mercader*..... 337

21.1 Astrobiology as the Realm of Emergence, Hierarchies and Scaling ..... 340

21.2 Implications of Power Law Behavior..... 343

21.3 Exponents and Their Meaning..... 344

21.4 Where and How Have Power Laws Been Used? ..... 346

21.5 Examples of Power Laws: From Cosmology to Biology..... 346

21.5.1 Examples from Cosmology and Astrophysics..... 347

21.5.2 Examples from Planetology ..... 350

21.5.3 Examples from Biochemistry..... 352

21.5.4 Examples from Biology..... 354

21.6 Conclusions ..... 358

21.7 References ..... 359

**22 Molecular Self-Assembly and the Origin of Life***Wolfgang M. Heckl* ..... 361

22.1 Key Questions for the Emergence of Life ..... 362

22.2 Directed Molecular Self-Assembly ..... 362

22.3 Direct Microscopic Verification of Self-Assembled DNA Bases  
on Mineral Template Surfaces ..... 36422.4 Genetically Based Supramolecular Architectures  
from Self-Assembled DNA Bases Coding for Amino Acids..... 368

22.5 Conclusion..... 370

22.6 References ..... 371

**23 Search for Morphological and Biogeochemical Vestiges of Fossil Life  
in Extraterrestrial Settings: Utility of Terrestrial Evidence***Manfred Schidlowski* ..... 373

23.1 Paleontological Evidence ..... 374

23.1.1 Microbialites ..... 375

23.1.2 Cellular Microfossils ..... 376

23.2 Biogeochemical Evidence ..... 378

23.2.1 Sedimentary Organic Carbon as a Recorder  
of Former Life Processes ..... 37923.2.2  $^{13}\text{C}/^{12}\text{C}$  in Sedimentary Organic Matter:  
Index of Autotrophic Carbon Fixation..... 380

23.3 Conclusions and Outlook..... 384

23.4 References ..... 384

---

**Part VI Forthcoming Space Missions Relevant for Astrobiology**

---

**24 Space Activities in Exo-Astrobiology**

<i>Bernard H. Foing</i> .....	389
24.1 Astrobiological Potential of Space Astronomy Missions .....	389
24.1.1 Infrared Spectroscopy of Cosmic Dust and Organics.....	389
24.1.2 The New Generation Space Telescope (NGST).....	390
24.1.3 Exoplanets from Space: GAIA, COROT, EDDINGTON, KEPLER and DARWIN .....	390
24.1.4 Global Life Signatures on Earth? .....	391
24.2 Astrobiological Potential of Planetary Missions .....	391
24.2.1 CASSINI–HUYGENS.....	391
24.2.2 STARDUST.....	394
24.2.3 ROSETTA .....	394
24.2.4 MARS-EXPRESS and Future Mars Missions .....	394
24.2.5 Europa Missions.....	395
24.2.6 Moon, Mercury, Formation of Planets and the Early Frustration of Life.....	395
24.2.7 Space Exposure Experiments.....	395
24.3 Conclusion: Roadmap for Astrobiology and Long-Term Space Exploration .....	398
24.3.1 Experimenting for Life in the Universe .....	398
24.3.2 Expanding Life in the Solar System .....	398
<b>List of Contributors</b> .....	399
<b>Subject Index</b> .....	405

Astrobiology

The Quest for the Conditions of Life

Horneck, G.; Baumstark-Khan, C. (Eds.)

2002, XV, 411 p. 39 illus. in color., Hardcover

ISBN: 978-3-540-42101-6
