

1 Acetolactate Synthase Inhibitors

TSUTOMU SHIMIZU, ISHIZUE NAKAYAMA, KOZO NAGAYAMA,
TAKESHIGE MIYAZAWA, and YUKIO NEZU

1.1	Introduction	1
1.2	Acetolactate Synthase-Inhibiting Herbicides Actively Developed in the Late 1990s	2
1.3	Discovery of Pyrimidinyl Carboxy Herbicides (Pyrimidinylsalicylate Class Herbicides)	5
1.3.1	Discovery of the Lead Structures	5
1.3.2	Discovery and Optimizations of the Secondary Lead Structure.	7
1.3.3	Further Optimizations of the Pyrimidinyl Carboxy Herbicides	9
1.4	Herbicidal Activity of Pyrimidinyl Carboxy Herbicides	10
1.4.1	Pyrithiobac-Sodium for Use in Cotton	10
1.4.2	Bispyribac-Sodium for Use in Rice	10
1.4.3	Bispyribac-Sodium for Vegetation Management	11
1.4.4	Pyriminobac-Methyl for Use in Rice	11
1.5	Physiological Plant Response to Pyrimidinyl Carboxy Herbicides	12
1.6	Mode of Action and Selectivity of Pyrimidinyl Carboxy Herbicides	13
1.6.1	Primary Target	13
1.6.2	Inhibition of Bacterial Acetolactate Synthase	14
1.6.3	Selectivity	15
1.7	Biological Characteristics of the Target Enzyme	16
1.7.1	Kinetic Studies of Plant Acetolactate Synthase	16
1.7.2	Subunit Compositions of Plant Acetolactate Synthase	17
1.7.3	Recombinant Systems	18
1.8	Inhibition Mechanism of the Target Enzyme by Pyrimidinyl Carboxy Herbicides.	19
1.8.1	Inhibition Kinetics with Plant Acetolactate Synthase	19
1.8.2	Inhibition Kinetics with Bacterial Acetolactate Synthase	22

1.9 Molecular Genetics of Target Enzyme	22
1.9.1 Acetolactate Synthase Genes of Plants	22
1.9.2 Acetolactate Synthase-Inhibiting Herbicide-Resistant Crops (Including <i>Arabidopsis thaliana</i>) and Their Acetolactate Synthase Genes	24
1.9.3 Acetolactate Synthase-Inhibiting Herbicide-Resistant Weeds and Their Acetolactate Synthase Genes	28
1.9.4 Genetic Engineering	31
References	32
 2 Bleaching Herbicides: Action Mechanism in Carotenoid Biosynthesis, Structural Requirements and Engineering of Resistance	
GERHARD SANDMANN	
2.1 Herbicidal Effect and Mode of Action	43
2.2 Interaction of Inhibitors with Carotene Desaturation	44
2.3 Structural Requirements for an Inhibitor of Phytoene Desaturase	47
2.4 Strategies for Genetic Engineering of Herbicide Resistance by Modification of the Carotenogenic Pathway	50
2.4.1 Overexpression of a Susceptible Lycopene Cyclase in <i>Synechococcus</i>	50
2.4.2 Selection of Mutants with Resistant Phytoene Desaturase and Gene Transfer into Tobacco	51
2.4.3 Naturally Resistant Phytoene Desaturase from Bacteria and Genetic Engineering of a Resistant Tobacco.	52
2.5 Conclusion and Perspectives	54
References	55
 3 Inhibitors of Aromatic Amino Acid Biosynthesis (Glyphosate)	
DONALD R. GEIGER and MARK A. FUCHS	
3.1 Introduction	59
3.2 Symptoms of Herbicidal Activity	60
3.3 Mode of Action of Glyphosate	62
3.3.1 Overview of the Mode of Action	62
3.3.2 Primary Mode of Action	64
3.3.2.1 Biochemical Characteristics of the Target Enzyme	64
3.3.2.2 Structural Characteristics of the Target Enzyme	65
3.3.2.3 Interaction Between 5-Enolpyruvylshikimate 3-Phosphate Synthase and Glyphosate	66
3.3.2.4 Molecular Requirements for Herbicidal Activity of Glyphosate	69

3.3.3 Secondary Physiological Consequences of Inhibition of 5-Enolpyruvylshikimate 3-Phosphate Synthase	70
3.3.3.1 Inhibition of Chorismate Synthesis	70
3.3.3.2 Depletion of Photosynthetic Carbon Reduction Cycle Intermediate Metabolites	71
3.3.3.3 Development of Secondary Damage Symptoms	72
3.3.3.4 Bases of Development of Lethal Symptoms Among Species	72
3.4 Mechanisms for Resistance and Tolerance to Glyphosate	75
3.4.1 Development of Commercially Valuable Glyphosate- Resistant Plants	75
3.4.2 Tolerance to Field Doses of Glyphosate in Field-Grown Plants	77
3.5 Summary	79
References	80

4 Inhibitors of Glutamine Synthetase

GUENTER DONN and HELMUT KÖCHER

4.1 Introduction	87
4.2 Plant Glutamine Synthetase Isoforms and Their Function	87
4.3 Glutamine Synthetase Inhibitors	90
4.4 Discovery of the Herbicidal Activity of Phosphinothricin and Bialaphos	91
4.5 Mode of Glutamine Synthetase Inhibition	92
4.6 Effects of Glutamine Synthetase Inhibitors in Plants	94
4.6.1 Visible Symptoms of Herbicidal Action	94
4.6.2 Physiological Effects of Glutamine Synthetase Inhibition in Plants by Phosphinothricin	94
4.7 Attempts to Generate Selectivity for Glufosinate	96
4.7.1 Attempts to Select Glufosinate Tolerant Mutants	97
4.7.2 Metabolic Inactivation of Glufosinate by Bar and Pat Enzymes	98
References	99

5 Acetyl-CoA Carboxylase Inhibitors

MALCOLM D. DEVINE

5.1 Introduction	103
5.2 Symptoms of Herbicidal Activity	103
5.3 Biochemical Characteristics of the Target Enzyme	104
5.4 Mode of Action of Cyclohexanedione and Aryloxyphenoxypropanoate Herbicides	105

5.5 Assays for Acetyl-CoA Carboxylase Activity	106
5.6 Molecular Genetics of Resistance to Acetyl-CoA Carboxylase Inhibitors	107
References	110
 6 Inhibitors of Biosynthesis of Very-Long-Chain Fatty Acids	
PETER BÖGER and BERND MATTHES	
6.1 Introduction	115
6.2 The Model System	119
6.3 Very Long-Chain Fatty Acid Biosynthesis Inhibition in Intact Leaves	123
6.4 The Cell-Free Elongase System	127
6.5 Assumptions of the Reaction Mechanism	131
6.6 Considerations on Resistance	133
References	135
 7 Cellulose Biosynthesis Inhibitor Herbicides	
KEVIN C. VAUGHN	
7.1 Introduction	139
7.2 Mode of Action Studies	140
7.2.1 Cell Plates	140
7.2.2 Developing Cotton Fibers	142
7.2.3 Azido-Dichlobenil Derivatives	144
7.3 Resistant Biotypes	145
7.4 Habituation	146
7.5 The Unusual Case of Quinclorac	148
7.6 Conspectus	148
References	148
 8 Inhibitors of Protoporphyrinogen Oxidase: A Brief Update	
HIROSHI MATSUMOTO	
8.1 Introduction	151
8.2 Protoporphyrinogen Oxidase Inhibitors and Their Mode of Action	152
8.3 Biochemical Characterization of Protoporphyrinogen Oxidase	154
8.4 Protoporphyrinogen Oxidase Genes and Transgenic Herbicide-Resistant Plants	154
8.5 Recent Advances in QSAR Studies	156
8.6 Antioxidative Stress Responses of Plants to Protoporphyrinogen Oxidase Inhibitors	157
References	158

9 Genetic Engineering of Herbicide-Resistant Plants

MAMORU HORIKOSHI

9.1 Introduction	163
9.2 Strategy	164
9.2.1 The Gene Encoding the Herbicide-Inactivating Enzyme	164
9.2.2 Mutant or Foreign Gene Encoding the Target Enzyme with Low Affinity to the Herbicide	165
9.3 Cloning of the Genes	166
9.3.1 Genetic Resource	166
9.3.1.1 Microorganism	167
9.3.1.2 Plant Tissue Culture	167
9.3.1.3 Mutant Plants	168
9.3.2 Cloning Methods	168
9.3.2.1 The Information of Protein	168
9.3.2.2 The Information of Nucleic Acid	169
9.3.2.3 Bacterial Genetics	169
9.4 Gene Transfer	169
9.4.1 PEG-Mediated Gene Transfer and Electroporation	170
9.4.2 Particle Bombardment	170
9.4.3 <i>Agrobacterium</i> -Mediated Gene Transfer	170
9.5 Vector Constructs	171
9.5.1 Expression Cassettes	171
9.5.1.1 Promoter and Terminator	171
9.5.1.2 Selection Marker Gene	172
9.5.1.3 Enhancer Sequence	172
9.5.1.4 Transit Peptide Sequence	172
9.5.2 Type of Vectors	172
9.5.2.1 Vector for Direct Gene Transfer	172
9.5.2.2 Vectors for <i>Agrobacterium</i> -Mediated Gene Transfer	173
9.5.2.3 Other Vectors	173
9.6 Conclusions	173
References	174

**10 Major Synthetic Routes for Modern Herbicide Classes
and Agrochemical Characteristics**

KENJI HIRAI, ATSUSHI UCHIDA, and RYUTA OHNO

10.1 Introduction	179
10.2 Acetolactate Synthase Inhibitors	179
10.2.1 Sulfonylurea Acetolactate Synthase Inhibitors	180
10.2.1.1 Practical Sulfonylurea Acetolactate Synthase Inhibitors	180

10.2.1.2	Structural Evolution of Sulfonylurea Acetolactate Synthase Inhibitors	186
10.2.1.3	Major Synthetic Routes for Sulfonylureas	193
10.2.2	Triazolinone Acetolactate Synthase Inhibitors	196
10.2.2.1	Practical Triazolinone Acetolactate Synthase Inhibitors	196
10.2.2.2	Structural Evolution of Triazolinone Acetolactate Synthase Inhibitors	197
10.2.2.3	Major Synthetic Routes for Triazolinone Acetolactate Synthase Inhibitors	197
10.2.3	Triazolopyrimidine Acetolactate Synthase Inhibitors	197
10.2.3.1	Practical Triazolopyrimidine Acetolactate Synthase Inhibitors	199
10.2.3.2	Structural Evolution of Triazolopyrimidine Acetolactate Synthase Inhibitors	201
10.2.3.3	Major Synthetic Routes for Triazolopyrimidine Acetolactate Synthase Inhibitors	202
10.2.4	Acetolactate Synthase Inhibitor-Like Miscellaneous Pyrimidines and Related Compounds	202
10.2.5	Pyrimidyl(thio)oxybenzoate Acetolactate Synthase Inhibitors	202
10.2.5.1	Practical Pyrimidyl(thio)oxybenzoate Acetolactate Synthase Inhibitors	202
10.2.5.2	Structural Evolution of Pyrimidyl(thio)oxybenzoate Acetolactate Synthase Inhibitors	204
10.2.5.3	Major Synthetic Routes for Pyrimidyl(thio)oxybenzoate Acetolactate Synthase Inhibitors	209
10.2.6	Imidazolinone Acetolactate Synthase Inhibitors	210
10.2.6.1	Practical Imidazolinone Acetolactate Synthase Inhibitors	210
10.2.6.2	Structural Evolution of Imidazolinone ALS Inhibitors	212
10.2.6.3	Major Synthetic Routes for Imidazolinone Acetolactate Synthase Inhibitors	212
10.3	Carotenogenesis Inhibitors	213
10.3.1	Phytoene Desaturase Inhibitors	213
10.3.1.1	Practical Phytoene Desaturase Inhibitors	213
10.3.1.2	Structural Evolution of Phytoene Desaturase Inhibitors	216

10.3.1.3	Major Synthetic Routes for Phytoene Desaturase Inhibitors	218
10.3.2	4-Hydroxyphenylpyruvate Dioxygenase Inhibitors	221
10.3.2.1	Practical 4-Hydroxyphenylpyruvate Dioxygenase Inhibitors	221
10.3.2.2	Structural Evolution of 4-Hydroxyphenylpyruvate Dioxygenase Inhibitors	223
10.3.2.3	Major Synthetic Routes for 4-Hydroxyphenylpyruvate Dioxygenase Inhibitors	229
10.3.3	Other Carotenogenesis Inhibitors	229
10.4	Aromatic Amino Acid Biosynthesis Inhibitors	232
10.5	Glutamine Synthetase Inhibitors	234
10.6	Acetyl CoA Carboxylase (ACCase) Inhibitors	234
10.6.1	Practical Acetyl CoA Carboxylase Inhibitors	235
10.6.2	Structural Evolution of Acetyl CoA Carboxylase Inhibitors	238
10.6.3	Major Synthetic Routes for Acetyl CoA Carboxylase Inhibitors	238
10.7	Very Long-Chain Fatty Acids Biosynthesis Inhibitors.....	243
10.7.1	Practical Chloroacetamide Very Long-Chain Fatty Acids Biosynthesis Inhibitors	244
10.7.2	Other Very Long-Chain Fatty Acids Biosynthesis Inhibitors	246
10.8	Cellulose Biosynthesis Inhibitors	249
10.8.1	Practical Cellulose Biosynthesis Inhibitors	249
10.8.2	Structural Evolution of Cellulose Biosynthesis Inhibitors	253
10.8.3	Major Synthetic Routes for Cellulose Biosynthesis Inhibitors	253
10.9	Protoporphyrinogen-IX Oxidase Inhibitors.....	255
10.9.1	Heterocycle Protoporphyrinogen-IX Oxidase Inhibitors	256
10.9.1.1	First-Generation Heterocycle Protoporphyrinogen-IX Oxidase Inhibitors	259
10.9.1.2	Second-Generation Heterocycle Protoporphyrinogen-IX Oxidase Inhibitors	260
10.9.2	Structural Evolution of Protoporphyrinogen-IX Oxidase Inhibitors Since 1995	262

10.9.2.1 Structural Evolution of First-Generation Heterocycle Protoporphyrinogen-IX Oxidase Inhibitors	263
10.9.2.2 Structural Evolution of Second-Generation Heterocycle Protoporphyrinogen-IX Oxidase Inhibitors	263
10.9.2.3 Next-Generation Heterocycle Protoporphyrinogen-IX Oxidase Inhibitors	271
10.9.3 Major Synthetic Routes for Protoporphyrinogen-IX Oxidase Inhibitors	274
10.10 Notes	278
Patent Literature	280

11 Diverse Response of Plants Towards Chiral Phytotoxic Chemicals

HIROYOSHI OMOKAWA

11.1 Introduction	291
11.2 Diverse Response of Optically Active Herbicides	292
11.2.1 Qualitatively Similar Enantioselective Action	294
11.2.2 Enantiomeric Metabolism	295
11.2.3 Chiral Inversion	296
11.3 Diverse Response of Plants Through Chirality	297
11.3.1 Chiral <i>s</i> -Triazines	298
11.3.1.1 Light-Dependent and Light-Independent Growth Inhibition	298
11.3.1.2 Cytokinin-Like Activity	300
11.3.2 Chiral Ureas	302
11.3.2.1 Enantioselective Phytotoxicity	302
11.3.2.2 Stress-Relieving Activity	304
11.3.2.3 Cross Intergenous Selective Phytotoxicity Among Gramineae	306
11.4 Chirality and Activity Relationship	307
11.4.1 Binding Direction of <i>s</i> -Triazines at the Photosystem II Reaction Center	308
11.4.2 Eudismic Analysis	311
11.4.2.1 Photosystem II Inhibition	311
11.4.2.2 Light-Independent Inhibition	313
11.4.2.3 Stress Relief	313
References	314

12 Transcuticular Penetration of Foliar-Applied Pesticides – Its Analysis by a Logistic-Kinetic Penetration Model

TADAKAZU WATANABE

12.1 Introduction	319
12.2 Overview	320
12.3 Logistic-Kinetic Transcuticular Penetration Model of Foliar-Applied Pesticides	323
12.3.1 Scenario	323
12.3.2 Transcuticular Penetration-Measuring Cell	326
12.4 Parameters and Factors Governing Transcuticular Penetration Kinetics of Foliar-Applied Pesticides	327
12.4.1 Adaptability of the Logistic-Kinetic Penetration Model	327
12.4.2 Factors Influencing Transcuticular Penetration Kinetics	328
12.4.3 Effect of Molecular Parameters of Pesticides on Transcuticular Penetration Kinetics	328
12.5 Effects of Adjuvants on Transcuticular Penetration Kinetics of Foliar-Applied Pesticides	330
12.5.1 Analysis of Adjuvant Action (Adjuvancy)	330
12.5.2 Effect of Triton Surfactants	331
12.5.3 Effect of Emulsifiable Oils	332
12.5.4 Effect of Humectants	332
12.5.5 Effect of Amine Surfactants on Glyphosate Penetration	333
12.6 Discussion and Conclusions	334
References	337

13 Structure-Activity Correlation of Very Long-Chain Fatty Acid Biosynthesis Inhibitors

KO WAKABAYASHI and PETER BÖGER

13.1 Introduction	341
13.2 Very Long-Chain Fatty Acid Biosynthesis Inhibition by Herbicides	341
13.3 Very Long-Chain Fatty Acid Biosynthesis Inhibition by Thenylchlor and Its Analogs	345
13.4 Action of Cafenstrole and its Analogs	349
13.5 Action of Indanofan and its Analogs	351
13.6 Outlook	353
References	356
