

# Contents

<b>1</b>	<b>Presentation of Astrometry</b>	<b>1</b>
1.1	Astrometry in Astronomy	1
1.2	Goals of Astrometry	2
1.2.1	Extragalactic Objects	3
1.2.2	Stars	3
1.2.3	Objects in the Solar System	5
1.2.4	Earth–Moon System	6
1.2.5	Conclusion	7
1.3	Astrometric Techniques	8
1.3.1	Small-Field Astrometry	8
1.3.2	Semi-global Astrometry	9
1.3.3	Distance Measurements	9
1.3.4	Other Techniques	9
1.3.5	Ground-Based or Space Astrometry?	10
<b>2</b>	<b>Image Formation</b>	<b>11</b>
2.1	Basic Principles	11
2.1.1	Propagation of a Light Ray	12
2.1.2	The Fermat Principle	12
2.1.3	Propagation of a Monochromatic Light Wave	13
2.1.4	Superposition Principle	15
2.1.5	The Huygens Principle	15
2.2	Diffraction	15
2.2.1	Propagation of a Limited Plane Wave	16
2.2.2	Diffraction by a Circular Aperture	18
2.2.3	Point Spread Function of a Circular Aperture	19
2.2.4	Resolving Power	20
2.3	Coherence of Light	21
2.3.1	Bandwidth	21
2.3.2	Coherence Time and Length	23
2.4	Instrumental Defects	24
2.4.1	Conventional Image	24
2.4.2	Defocus	26
2.4.3	Spherical Aberration	26

2.4.4	Coma .....	27
2.4.5	Astigmatism and Field Curvature .....	28
2.4.6	Distortion .....	29
2.4.7	Chromatic Aberration .....	30
2.4.8	Diffraction Chromatism .....	31
<b>3</b>	<b>Atmospheric Effects on Image Formation .....</b>	<b>33</b>
3.1	Monochromatic Atmospheric Refraction .....	33
3.1.1	Approximate Theory of Atmospheric Refraction ....	33
3.1.2	Spherical Atmosphere Approximation .....	34
3.1.3	Laplace Formula .....	36
3.1.4	Normal Refraction .....	38
3.1.5	Temperature and Pressure Dependence .....	38
3.1.6	Differential Refraction .....	39
3.2	Chromatic Refraction .....	40
3.2.1	Chromatic Refraction Correction .....	40
3.2.2	Application to Star Observations .....	40
3.2.3	Empirical Correction .....	41
3.2.4	Simplified Empirical Correction .....	43
3.3	Refraction in Distance .....	44
3.3.1	Distance Measurements in Optical Wavelengths ....	44
3.3.2	Refraction of Radio Waves .....	45
3.4	Heterogeneity of the Atmosphere .....	48
3.4.1	Structure of the Atmosphere .....	48
3.4.2	Effects of Turbulence .....	50
3.4.3	Statistical Properties of a Turbulent Atmosphere ...	51
3.4.4	Wave Propagation in the Atmosphere .....	52
3.4.5	Seeing .....	53
3.4.6	Instantaneous Image .....	54
3.4.7	Resolving Power of Telescopes .....	56
3.4.8	Adaptive Optics .....	58
<b>4</b>	<b>Reduction of Observations .....</b>	<b>61</b>
4.1	Reference Systems and Frames .....	61
4.1.1	Ideal Reference System .....	62
4.1.2	Reference System .....	63
4.1.3	Conventional Reference System .....	63
4.1.4	Conventional Reference Frames .....	64
4.1.5	Change of Reference Coordinates .....	65
4.1.6	Application to Local Coordinates .....	66
4.1.7	Relation with the Celestial Reference Frame .....	68
4.1.8	New Intermediary System .....	70
4.1.9	Satellite Astrometry .....	71

4.2	Geometrical Effects .....	71
4.2.1	Field-to-Focus Transformation .....	71
4.2.2	Annual Parallax .....	74
4.2.3	Other Parallactic Corrections .....	75
4.2.4	Proper Motions .....	76
4.3	Optical Effects .....	77
4.3.1	Aberration .....	77
4.3.2	Relativistic Light Deflection .....	79
4.3.3	Relativistic Light-Time Delay .....	80
4.3.4	Doppler Shift .....	80
4.4	Reduction of Observations .....	81
4.4.1	Position of the Problem .....	82
4.4.2	Modelling .....	83
4.4.3	Calibration .....	84
4.5	Estimation of Parameters .....	84
4.5.1	Notion of Uncertainty .....	84
4.5.2	Evaluation of the Uncertainty .....	86
4.5.3	Method of Least Squares .....	87
4.5.4	Variance and Covariances in Least Squares .....	89
<b>5</b>	<b>Small-Field Astrometry .....</b>	<b>91</b>
5.1	Photographic Astrometry .....	91
5.1.1	Telescopes for Small-Field Astrometry .....	92
5.1.2	Properties of Photographic Plates .....	95
5.1.3	Image of a Star .....	99
5.1.4	Photographic Plate Measurements .....	101
5.1.5	Determination of Image Positions .....	102
5.1.6	Plate Reduction .....	103
5.1.7	Star Catalogues .....	107
5.2	Photoelectricity in Astrometry .....	109
5.2.1	Photomultipliers .....	109
5.2.2	CCD Receivers .....	110
5.2.3	CCD Calibration .....	112
5.2.4	CCD Astrometric Observations .....	113
5.2.5	CCD Scan Mode .....	114
5.3	Grid-Modulation Astrometry .....	117
5.3.1	Grid-Modulation Theory .....	117
5.3.2	Reduction of a Grid-Modulated Signal .....	118
5.3.3	Multichannel Astrometric Photometer .....	119
5.4	Astrometry with the Hubble Space Telescope .....	121
5.4.1	Description of the HST .....	122
5.4.2	Degradation of the HST Optics .....	122
5.4.3	Description of the Fine Guidance Sensors .....	124
5.4.4	Reduction of FGS Data in Transfer-Function Mode ..	127

5.4.5	Reduction of FGS Data in Astrometric Mode	129
5.4.6	Astrometric Use of the WF/PC	131
5.5	Radial Velocities	132
5.5.1	Spectroscopy	133
5.5.2	Determination of Radial Velocities: CORAVEL	133
5.5.3	Objective Prism	135
<b>6</b>	<b>Meridian Circles</b>	<b>139</b>
6.1	Measurement of Large Angles	139
6.1.1	Measuring Angles by a Rotation	139
6.1.2	Materialised Representation of Angles	140
6.2	The Meridian Circle	142
6.2.1	Principle of a Meridian Circle	142
6.2.2	Description of the Meridian Circle	144
6.3	Determination of Celestial Coordinates	144
6.3.1	Right Ascensions	145
6.3.2	Collimation	146
6.3.3	Inclination of the Rotation Axis	147
6.3.4	Azimuth of the Rotation Axis	148
6.3.5	Calibration of the Instrumental Constants	149
6.3.6	Bessel's Formula	150
6.3.7	Determination of Declinations	151
6.3.8	Geometric Corrections for Declinations	151
6.3.9	Flexure of the Tube	152
6.3.10	Errors in Refraction	152
6.3.11	Summary of Corrections in Declination	153
6.4	Micrometers	154
6.4.1	Rotating Mask Micrometer	154
6.4.2	Oscillating Grid Micrometer	156
6.4.3	Use of an Image Dissector	161
6.4.4	CCD Micrometer	162
6.4.5	CCD Telescopes	163
6.5	Horizontal Meridian Circles	163
6.5.1	Pulkovo Horizontal Meridian Circle	164
6.5.2	Axial Meridian Circle	165
6.6	Reduction of Meridian Observations	166
6.6.1	Relative Observations	166
6.6.2	Global Reduction	167
6.6.3	Precisions of Observations	169
<b>7</b>	<b>Equal Altitude Instruments</b>	<b>171</b>
7.1	Principle of Astrolabes	171
7.1.1	Geometry of the Observation	172
7.1.2	Curvature of the Parallel	173

7.2	Description of an Astrolabe .....	174
7.2.1	Principle of the Danjon Prism Astrolabe .....	175
7.2.2	Principle of a Full Pupil Astrolabe .....	176
7.2.3	Description of a Full Pupil Astrolabe .....	177
7.2.4	The Mark 4 Astrolabe .....	180
7.2.5	Instrumental Parameters .....	181
7.3	Method of Equal Altitudes .....	182
7.3.1	Fundamental Formula .....	183
7.3.2	Observational Procedures .....	184
7.3.3	Determination of Instrumental Parameters .....	185
7.3.4	Determination of Star Positions .....	186
7.3.5	Astrolabe Star Catalogues .....	186
7.4	Solar Astrolabe .....	187
7.4.1	Principle of a Solar Astrolabe .....	187
7.4.2	Description of the Multiprism Solar Astrolabe .....	189
7.4.3	Reduction of Observations .....	190
7.4.4	Variable Prism Solar Astrolabe .....	192
7.5	The Photographic Zenith Tube .....	193
<b>8</b>	<b>Hipparcos</b> .....	<b>197</b>
8.1	Hipparcos Mission .....	197
8.1.1	General Principle of Hipparcos .....	198
8.1.2	Description of the Satellite .....	198
8.1.3	Input Catalogue .....	201
8.1.4	Nominal Scanning Law .....	203
8.1.5	Attitude Control .....	203
8.1.6	Observing Strategy .....	204
8.1.7	Operation of the Satellite .....	205
8.1.8	Data Reduction .....	206
8.2	Photon Count Treatment .....	206
8.2.1	Single-Slit Response .....	206
8.2.2	Transit Time on the Star-Mapper .....	208
8.2.3	Grid-to-Field Transformation .....	209
8.2.4	Reference Great Circles .....	210
8.2.5	Attitude Determination .....	212
8.2.6	Representation of the Attitude .....	213
8.2.7	Main Grid Photon Counts .....	215
8.2.8	Main Grid Coordinates .....	216
8.2.9	Case of Double and Multiple Stars .....	218
8.3	Reduction on a Great Circle .....	219
8.3.1	Geometry of the Reduction .....	219
8.3.2	Equations of Condition .....	220
8.3.3	Design Matrix and Solution .....	221
8.4	Astrometric Parameter Determination .....	223

8.4.1	Basic Equations	223
8.4.2	Sphere Reconstitution	225
8.4.3	Astrometric Parameter Determination	227
8.5	Iterations and Results for Single Stars	227
8.6	Special Tasks	229
8.6.1	Double and Multiple Stars	229
8.6.2	Hipparcos Photometry	231
8.6.3	Solar System Objects	232
8.6.4	Link to the Extragalactic Reference Frame	233
8.7	Hipparcos Final Catalogue	235
8.7.1	Merging of the Catalogues	235
8.7.2	Contents of the Hipparcos Catalogue	236
8.8	Tycho	238
8.8.1	Principle of Tycho	238
8.8.2	Detection of Stars	238
8.8.3	Star Identification	239
8.8.4	Equations for the Astrometric Parameters	240
8.8.5	Astrometric Parameter Determination	241
8.8.6	Tycho Catalogue	242
8.9	Tycho-2 Catalogue	243
8.9.1	Identification of Transits	243
8.9.2	Estimation of Stellar Positions	243
8.9.3	Tycho-2 Catalogue	245
<b>9</b>	<b>Very Small Field Astrometry</b>	<b>247</b>
9.1	Stellar Amplitude Interferometry	247
9.1.1	Interference Fringes	247
9.1.2	Michelson Interferometry	249
9.1.3	Fundamental Equation of Stellar Interferometry	251
9.1.4	Description of Interferometers	254
9.1.5	Double Star Observation	259
9.1.6	Interferometry of Extended Sources	261
9.1.7	Resolving Power of an Interferometer	265
9.1.8	Other Optical Interferometers	265
9.2	Speckle Interferometry	267
9.2.1	Reduction by the Autocorrelation Method	267
9.2.2	Reduction in a Fourier Space	268
9.2.3	Operations	269
9.3	Occultations by the Moon	270
9.3.1	Diffraction by a Half-Plane	270
9.3.2	Application to Lunar Occultations	272
9.3.3	Observation of Occultations	273
9.3.4	Reduction of Observations	274
9.3.5	Precisions Achieved	276

<b>10 Phase Interferometry</b>	277
10.1 Optical Phase Interferometry	277
10.1.1 General Theory	277
10.1.2 Reduction of Observations	279
10.1.3 Refraction Correction in the Mark III Interferometer	280
10.1.4 Astrometry with the NPOI	282
10.1.5 Astrometric Precision	283
10.2 Radio Interferometry	284
10.2.1 Radio Telescopes	284
10.2.2 Interferometry in Radio Waves	286
10.2.3 Very Long Baseline Interferometry	288
10.2.4 VLBI Data Reduction	290
10.2.5 Observation of Stars by VLBI	292
10.2.6 Space VLBI	293
<b>11 Timing Techniques</b>	295
11.1 Chronometry	295
11.1.1 Oscillators	295
11.1.2 Quartz Oscillators	297
11.1.3 Stimulated Emissions	299
11.1.4 Caesium Atomic Frequency Standards	301
11.1.5 Atomic Clocks	305
11.1.6 Atomic Time Scales	307
11.2 Lasers	309
11.2.1 The Laser Effect	309
11.2.2 Implementation for Telemetry	311
11.3 Laser Ranging	311
11.3.1 Lunar Laser Ranging Equipment	313
11.3.2 Photon Efficiency of Lunar Lasers	315
11.3.3 Return Recognition and Data Reduction	317
11.3.4 Satellite Laser Ranging	319
11.4 Global Positioning System	320
11.4.1 Principle of the System	321
11.4.2 Description of the GPS	321
11.4.3 Measurements with GPS Receivers	322
11.4.4 Extensions	324
11.5 Planetary Radars	325
11.5.1 Radar Ranging Measurements	325
11.5.2 Application to Planets	327
11.5.3 Ranging to Asteroids	328
11.6 Pulsar Timing	329
11.6.1 Timing Pulses	330
11.6.2 Propagation Time of Pulsar Signals	332
11.6.3 Interpretation of the Observations	332

11.6.4 Astrometric Results .....	334
<b>12 Future of Astrometry .....</b>	<b>337</b>
12.1 Achievements of Present Astrometry .....	337
12.1.1 Extragalactic Objects .....	337
12.1.2 Stars .....	338
12.1.3 Objects in the Solar System .....	339
12.2 Need for Better Astrometry .....	341
12.2.1 Extragalactic Objects .....	343
12.2.2 Stars .....	344
12.2.3 The Galaxy .....	346
12.3 Space Global Astrometry Projects .....	347
12.3.1 DIVA .....	348
12.3.2 FAME .....	349
12.3.3 GAIA .....	350
12.4 Space Interferometry .....	352
12.4.1 SIM .....	352
12.4.2 Space VLBI .....	353
12.4.3 Astrometry from the Moon? .....	353
12.5 Prospects of Ground-Based Astrometry .....	354
12.5.1 CCD Astrometry .....	354
12.5.2 Very Small Field Astrometry .....	355
12.5.3 Role of Ground-Based Astrometry .....	355
12.6 As a Conclusion .....	356
<b>References .....</b>	<b>359</b>
