

Contents

1	A Crisis in Classical Physics	1
1.1	The Reality of Atoms	1
1.2	The Reality of Field	3
1.3	The Discreteness of Energy	4
1.4	The Nature of Atomic Objects	8
1.5	At the Threshold of the Quantum Revolution	9
2	Finite-Dimensional Vector Spaces	11
2.1	Vector Spaces and Scalar Product	11
2.2	Operators	14
2.3	Eigenvalues and Eigenvectors	16
2.4	Matrix Representation of Linear Operators	17
2.5	Spectral Decomposition	21
2.6	Functions of an Operator	23
2.7	Commuting Operators	25
2.8	Direct Sum of Vector Spaces	26
	Exercises	27
3	Finite-Dimensional State Spaces	31
3.1	The State of a System	31
3.2	Dynamical Variables	33
3.3	Hamiltonian	38
3.4	The Schrödinger Equation	38
3.5	Time-Independent Hamiltonian	41
3.6	Solution of the Schrödinger Equation	43
3.7	Commuting Operators	44
3.8	The Hydrogen Molecular Ion	45
	Exercises	48
4	Spin and Magnetic Moment	53
4.1	The Stern–Gerlach Experiment	53
4.2	Spatial Rotations	56
4.3	Generators of Rotation	58
4.4	Spin, Magnetic Moment and the Zeeman Effect	62
4.5	The Larmor Precession	65

4.6	Spin 1/2	66
	Exercises	69
5	Particle in One Dimension	71
5.1	Basis Vectors $ x\rangle$	71
5.2	Position, Momentum and Energy	73
5.3	State Space	76
5.4	The Schrödinger Equation	81
5.5	Square Well Potential	83
5.6	Square Potential Barrier	87
5.7	The Harmonic Oscillator	88
5.8	Evolution Operator and Wave Packets	93
5.9	Appendix	97
5.9.1	The Dirac Delta Function	97
5.9.2	Infinite-Dimensional Vector Spaces	100
5.9.3	Hermite Polynomials	101
	Exercises	104
6	The Interpretation of Quantum Mechanics	109
6.1	Formalism and Interpretation Rules	109
6.2	Interpretation of the State Vector	111
6.3	State Preparation and Measurement	115
6.4	The Heisenberg Uncertainty Principle	118
6.5	Complementarity	122
6.6	Quantum Mechanics and Classical Mechanics	123
	Exercises	125
7	Particle in Three Dimensions	127
7.1	State Space and Schrödinger's Equation	127
7.2	Probability Current	131
7.3	Angular Momentum	134
7.4	Spherically Symmetric Potential	138
7.5	r^{-1} Potential	140
7.6	Spherical Square Well	143
7.7	Electromagnetic Field	145
7.8	Gauge Transformation	148
7.9	Appendix	151
7.9.1	Legendre Polynomials and Spherical Harmonics	151
7.9.2	Laguerre Polynomials	154
7.9.3	Bessel Functions	155
	Exercises	158

8	Numerical Solution	163
8.1	Finite-Difference Equation	163
8.2	Discrete Spectrum in One Dimension	166
8.3	Box Normalization	170
8.4	Discrete Spectrum in Three Dimensions	173
8.5	Phase Shifts	177
	Exercises	180
9	The Central-Field Model	183
9.1	The Hamiltonian of an Atom	183
9.2	The Hydrogen Atom and Hydrogen-Like Ions	187
9.3	The Central Field	188
9.4	The Thomas–Fermi Equation	190
9.5	The Periodic Table of Elements	193
9.6	Self-Consistent Field	195
9.7	Validity of the Central-Field Model	198
	Exercises	202
10	Stationary Perturbations	205
10.1	Small Perturbation	205
10.2	Nondegenerate Energy	207
10.3	Degenerate Energy	209
10.4	Spatial Extension of the Atomic Nucleus	211
10.5	Dipole Moment of Atoms and Stark Effect	213
10.6	Van der Waals Forces	215
10.7	Rotation and Vibration of Diatomic Molecules	218
	Exercises	221
11	Stationary Scattering States	225
11.1	Scattering Cross Section	225
11.2	Stationary Scattering States	227
11.3	Green’s Operators and Functions	229
11.4	Scattering Integral Equation	234
11.5	The Born Approximation	235
11.6	Partial Waves and Phase Shifts	238
11.7	Hard Sphere and Spherical Square Well	242
11.8	Analytic Properties of Partial Waves	244
11.9	Scattering by Many Identical Centers	248
	Exercises	252
12	The Density Operator	255
12.1	Pure State	255
12.2	Statistical Mixture	257
12.3	Tensor Product of State Spaces	259
12.4	Description of a Subsystem	261

12.5 Application to Statistical Physics	264
12.6 Consistent Histories	267
Exercises	271
13 Symmetry of the Hamiltonian	275
13.1 Symmetry Group	275
13.2 Space Inversion, Rotations and Translations	277
13.3 General Properties of Groups	279
13.4 Matrix Representation of a Group	281
13.5 Finite Groups	284
13.6 Time Reversal	290
13.7 Lie Groups	292
13.8 Spatial Translations	296
Exercises	299
14 Rotations and Angular Momentum	305
14.1 The Rotation Group	305
14.2 Finite Rotations	310
14.3 D Matrices as Wave Functions	315
14.4 Interaction of Two Angular Momenta	319
14.5 Total Angular Momentum	321
14.6 Clebsch–Gordan Coefficients	323
14.7 The Wigner–Eckart Theorem	327
14.8 Enlarged Symmetry	329
Exercises	333
15 Dirac’s Relativistic Equation	337
15.1 The Lorentz Group	337
15.2 The Dirac Equation	342
15.3 Plane-Wave Solution	344
15.4 Properties of the Dirac Equation	346
15.5 Electron in an Electromagnetic Field	349
15.6 r^{-1} Potential	353
Exercises	358
16 The Path Integral	361
16.1 Propagator and Path Integral	361
16.2 Convergence of Path Integrals	366
16.3 The Semiclassical Approximation	369
16.4 WKB Wave Functions	374
16.5 Turning Point	377
16.6 The Bohr–Sommerfeld Rule	380
16.7 Potential Barrier	382
16.8 Classical Evolution	384
Exercises	387

17 Atomic Orbitals	391
17.1 The Variational Method	391
17.2 The Ground-State Energy of the Helium Atom	393
17.3 Antisymmetric Wave Functions	396
17.4 The Hartree–Fock Equations	400
17.5 Using the Hartree–Fock Equations	406
Exercises	410
18 Atomic Terms and Multiplets	413
18.1 LS Coupling	413
18.2 Atomic Wave Functions	417
18.3 Average Energy of a Configuration	422
18.4 Energy of Atomic Multiplets	427
18.5 Spin–Orbit Interaction	433
18.6 The Zeeman Effect	437
18.7 Configuration Interaction	440
Exercises	442
19 Semiclassical Radiation Theory	445
19.1 Harmonic Perturbation	445
19.2 Transition to the Continuous Spectrum	449
19.3 Transition to the Discrete Spectrum	453
19.4 Spontaneous Emission	457
19.5 Electric Dipole Transitions	459
19.6 Higher-Order Transitions	462
19.7 The Shape of Spectral Lines	465
Exercises	467
20 Molecules	471
20.1 The Born–Oppenheimer Approximation	471
20.2 Molecular Orbitals	475
20.3 Electronic Terms of Diatomic Molecules	481
20.4 Rotation and Vibration of Diatomic Molecules	485
20.5 Electric Dipole Transitions	488
20.6 Polyatomic Molecules	493
Exercises	496
21 Long-Distance Correlations and Measurement	499
21.1 Einstein, Podolsky and Rosen	499
21.2 The Bell Inequality	502
21.3 Quantum Mechanics and Relativistic Locality	505
21.4 The Measurement Problem	508
21.5 Search for a Solution	513
21.6 Decoherence	517
21.7 True Propositions and Reliable Propositions	520

XIV Contents

Answers to Selected Exercises	525
References	537
Index	549

Quantum Mechanics

From Basic Principles to Numerical Methods and
Applications

Marchildon, L.

2002, XVI, 560 p., Hardcover

ISBN: 978-3-540-43342-2
