# Contents

<b>1. Preliminaries</b> .....	1
1.1 Preliminaries from Operator Theory .....	1
1.1.1 Linear Continuous Operators .....	2
1.1.2 Linear Compact Operators .....	3
1.1.3 Examples of Compact Integral Operators .....	4
1.1.4 Characterization of Continuous Projectors .....	5
1.1.5 Complementable Subspaces .....	5
1.2 Fredholm Theorems .....	7
1.2.1 Results Involving only the Banach Space $\mathcal{X}$ .....	7
1.2.2 Results Involving $\mathcal{X}$ and its Dual $\mathcal{X}' = \mathcal{L}(\mathcal{X}, \mathbb{C})$ .....	8
1.2.3 Dual Systems and Dual Operators .....	9
1.2.4 Results Involving Dual Systems .....	11
1.3 The Fredholm Operators .....	13
1.3.1 Fredholm Operators of Index 0 .....	14
1.3.2 The Product of Fredholm Operators .....	15
1.3.3 Fredholm Operators of Nonzero Index .....	17
1.3.4 Perturbation of Fredholm Operators .....	18
1.4 The Regularizers .....	20
1.4.1 Connections to Fredholmness .....	20
1.4.2 Results of Fredholm Type .....	22
1.5 Krylov Subspace Methods .....	25
1.5.1 GMRES .....	25
1.5.2 Another Algorithm of GMRES .....	29
1.5.3 Conjugate Gradients (CGMR and CGME) .....	30
<b>2. Single Layer and Double Layer Potentials</b> .....	35
2.1 Classical Boundary Value Problems .....	35
2.2 Fundamental Solution .....	39
2.3 An Integral Representation of Functions .....	44
2.4 Jordan Arcs and Curves .....	48
2.5 Boundary Potentials .....	54
2.5.1 Single Layer Potential .....	54
2.5.2 Double Layer Potential .....	56
2.5.3 Normal Derivative of the Single Layer Potential .....	61

2.5.4	Normal Derivative of the Double Layer Potential . . . . .	66
2.5.5	Calderon Projector . . . . .	69
<b>3.</b>	<b>Solution of Boundary Value Problems by Integral Equations</b>	<b>71</b>
3.1	Integral Equations for Boundary Value Problems . . . . .	71
3.2	Solution of the Laplace Equation by Integral Equations of the Second Kind . . . . .	74
3.2.1	Solvability of the Boundary Integral Equations . . . . .	76
3.2.2	Solution of the Interior Boundary Value Problems . . . . .	78
3.2.3	Solution of the Exterior Boundary Value Problems . . . . .	81
3.3	Solution of the Helmholtz Equation by Integral Equations of the Second Kind . . . . .	89
3.3.1	Solvability of the Boundary Integral Equations . . . . .	89
3.3.2	Solution of the Boundary Value Problems . . . . .	95
3.3.3	Radiation Condition . . . . .	99
<b>4.</b>	<b>Singular Integral Equations</b> . . . . .	<b>105</b>
4.1	Singular Integral Equations in Hölder Spaces . . . . .	105
4.1.1	Hölder Spaces . . . . .	105
4.1.2	Cauchy Integral . . . . .	106
4.1.3	Cauchy Singular Integral Operator . . . . .	110
4.1.4	Operator $S_k$ . . . . .	112
4.1.5	The Commutator of $S$ and $\mathcal{M}_a$ . . . . .	115
4.1.6	Projection Operators $P_-$ and $P_+$ . . . . .	116
4.1.7	Winding Number . . . . .	117
4.1.8	The Index of the Singular Operator . . . . .	119
4.1.9	The Index of More General Singular Integral Operator . . . . .	122
4.2	$L^2$ -Theory of Singular Integral Equations . . . . .	124
4.2.1	Lax Theorem . . . . .	124
4.2.2	Singular Integral Operators on $L^2(\Gamma)$ . . . . .	127
<b>5.</b>	<b>Boundary Integral Operators in Periodic Sobolev Spaces</b> . . . . .	<b>133</b>
5.1	Distributions on the Real Line . . . . .	133
5.2	Periodic Distributions . . . . .	136
5.3	Periodic Sobolev Spaces . . . . .	141
5.4	Finite Part of Hypersingular Integrals . . . . .	143
5.5	Spectral Representation of a Convolution Integral Operator . . . . .	148
5.6	Symm's Integral Operator . . . . .	150
5.7	Hilbert Integral Operator . . . . .	152
5.8	Cauchy Integral Operator on the Unit Circle . . . . .	154
5.9	Cauchy Integral Operator on a Jordan Curve . . . . .	155
5.10	Hypersingular Integral Operator . . . . .	156
5.11	Biharmonic Problem . . . . .	157
5.12	Operator Interpolation . . . . .	161
5.13	Multiplication of Functions in $H^\lambda$ . . . . .	163

<b>6. Periodic Integral Equations</b>	167
6.1 Boundedness of Integral Operators Between Sobolev Spaces	167
6.1.1 Product of Biperiodic Functions	168
6.1.2 Boundedness of Integral Operators	171
6.2 Fredholmness of Integral Operators Between Sobolev Spaces	175
6.3 A Class of Periodic Integral Equations	176
6.4 Examples of Periodic Integral Equations	177
6.5 Analysis of the Modified Symm's Equations	180
6.6 A General Class of Periodic Integral Equations	182
6.6.1 Winding Number of a Periodic Function	182
6.6.2 Inversion of Cauchy Singular Operators	185
6.6.3 The Class of Integral Equations	187
6.6.4 Example: the Cauchy Integral Equation	192
6.7 Equations with Analytic Coefficient Functions	193
6.7.1 Spaces of Periodic Analytic Functions	193
6.7.2 Mapping Properties of Periodic Integral Operators	195
6.7.3 Analytic Solutions of Integral equations	197
<b>7. Periodic Pseudodifferential Operators</b>	199
7.1 Prolongation of a Function Defined on $\mathbb{Z}$	199
7.2 Two Definitions of PPDO and Their Equivalence	202
7.3 Boundedness of a PPDO	205
7.4 Asymptotic Expansion of the Symbol	206
7.5 Amplitudes	207
7.6 Asymptotic Expansion of Integral Operators	214
7.6.1 Operator $(Au)(t) = \int_0^1 a(t, s) \log \sin \pi(t-s) u(s) ds$	215
7.6.2 Operator $(Au)(t) = i \int_0^1 a(t, s) \cot \pi(t-s)u(s) ds$	216
7.7 The Symbol of Dual and Adjoint Operators	217
7.8 The Symbol of the Composition of PPDOs	218
7.9 Pseudolocality	221
7.10 Elliptic PPDOs	224
7.11 Gårding's Inequality	227
7.12 Estimation of the Operator Norm	230
7.13 Classical PPDOs	231
7.14 Integral Operator Representation of Classical PPDOs	234
7.15 Functions $\kappa_\alpha^\pm(t)$	237
<b>8. Trigonometric Interpolation</b>	239
8.1 Subspace $\mathcal{T}_n$	239
8.2 Orthogonal Projection	241
8.3 Interpolation Projection	242
8.3.1 Interpolation of Functions $u \in H^\mu$	242
8.3.2 Interpolation of Even and Odd Functions	244
8.3.3 Discrete Fourier Transform	245
8.3.4 Interpolation of Functions $au_n, u_n \in \mathcal{T}_n$	246

8.4	Exponential Approximation Order . . . . .	248
8.5	Two Dimensional Interpolation . . . . .	250
8.5.1	Estimates for $u \in H^{\mu_1, \mu_2}$ . . . . .	250
8.5.2	Estimates for $u \in H_1^\mu(\mathbb{R}^2)$ . . . . .	252
<b>9.</b>	<b>Galerkin Method and Fast Solvers . . . . .</b>	<b>255</b>
9.1	Precondition of the Problem . . . . .	255
9.2	Galerkin Method for the Preconditioned Problem . . . . .	257
9.3	Matrix Representation of a PIO . . . . .	262
9.4	A Full Discretization . . . . .	264
9.4.1	Approximation of the Galerkin Equation . . . . .	264
9.4.2	Computational Costs . . . . .	268
9.4.3	Fast Solvers . . . . .	270
9.5	Using Asymptotic Expansions . . . . .	273
9.5.1	Approximation of the Galerkin Equation . . . . .	273
9.5.2	Two Grid Iteration Method . . . . .	276
9.5.3	Fast Solvers . . . . .	277
9.6	Stability Estimates . . . . .	279
9.7	Regularization via Discretization . . . . .	286
9.8	Standard Galerkin Method . . . . .	286
9.8.1	Stability Inequality . . . . .	287
9.8.2	Convergence of the Galerkin Method . . . . .	290
<b>10.</b>	<b>Trigonometric Collocation . . . . .</b>	<b>293</b>
10.1	Collocation Problem . . . . .	293
10.2	Full Discretization . . . . .	298
10.3	Modifications . . . . .	302
10.4	Further Discrete Versions . . . . .	303
10.4.1	Problem, Methods, Convergence . . . . .	304
10.4.2	Matrix Form of the Method . . . . .	308
10.4.3	Preconditioning and Iteration Solution . . . . .	311
10.5	Fast Solvers for Lippmann–Schwinger Equation . . . . .	314
10.5.1	Lippmann–Schwinger Equation . . . . .	314
10.5.2	Collocation Solution . . . . .	317
10.5.3	Two-Grid Iterations . . . . .	319
10.5.4	Matrix Forms of the Methods . . . . .	321
10.5.5	Appendix: Fourier Coefficients of $\mathcal{K}(x)$ . . . . .	323
<b>11.</b>	<b>Integral Equations on an Open Arc . . . . .</b>	<b>325</b>
11.1	Equations on an Interval . . . . .	325
11.2	Periodization . . . . .	329
11.2.1	Equations with a Logarithmic Singular Kernel . . . . .	329
11.2.2	Cauchy-singular Equations . . . . .	330
11.2.3	Hypersingular Equations . . . . .	332
11.3	Even and Odd Operators . . . . .	333

11.4 Analysis of the Periodic Problem . . . . .	337
11.4.1 Case of Even Operator . . . . .	338
11.4.2 Case of Odd Operator . . . . .	340
11.5 More About Convolution Operators on $(-1, 1)$ . . . . .	343
11.6 Collocation Solution . . . . .	348
11.7 Fully Discrete Collocation Methods . . . . .	353
<b>12. Quadrature Methods . . . . .</b>	<b>355</b>
12.1 The Idea of a Quadrature Method . . . . .	355
12.2 A Simple Quadrature Method . . . . .	357
12.2.1 Consistency . . . . .	357
12.2.2 Stability . . . . .	361
12.2.3 Convergence . . . . .	365
12.3 The $\epsilon$ -quadrature Method . . . . .	366
12.4 A Modified Quadrature Method . . . . .	380
12.5 Integral Equations of the Second Kind . . . . .	390
12.6 Singular Integral Equations . . . . .	392
12.7 Hypersingular Equations . . . . .	396
12.8 Extensions by Localization . . . . .	399
<b>13. Spline Approximation Methods . . . . .</b>	<b>401</b>
13.1 Spline Spaces . . . . .	401
13.2 Splines on Uniform Meshes . . . . .	403
13.3 Approximation and Inverse Properties of Splines . . . . .	405
13.4 Discrete Fourier Transform of Periodic Functions . . . . .	411
13.5 Spline Collocation on Uniform Mesh . . . . .	413
13.6 An Abstract Galerkin Method . . . . .	428
13.7 The Spline Galerkin Method . . . . .	433
13.8 Some Extensions of the Basic Methods . . . . .	435
13.8.1 Spline Based Petrov-Galerkin Methods . . . . .	435
13.8.2 Qualocation and Related Methods . . . . .	436
13.8.3 Dirac's Distributions as Trial Functions . . . . .	438
<b>Bibliography . . . . .</b>	<b>441</b>
<b>Index . . . . .</b>	<b>449</b>

Periodic Integral and Pseudodifferential Equations with  
Numerical Approximation

Saranen, J.; Vainikko, G.

2002, XI, 452 p., Hardcover

ISBN: 978-3-540-41878-8
