

Contents

1 Brief Introduction

Yoshiyuki Kawazoe, Tamotsu Kondow, Kaoru Ohno	1
1.1 Physical Approaches Used in Cluster Science	1
1.2 Magic Numbers	2
1.3 Collision and Insertion	3
1.4 Intermolecular Bonding Through Photoabsorption	4
1.5 Molecular Solids	5
1.6 Textured Materials and Interfaces	5

Part I Metallic Clusters

2 Ab Initio Computer Simulations on Microclusters: Structures and Electronic Properties

Vijay Kumar, Keivan Esfarjani, Yoshiyuki Kawazoe	9
2.1 Introduction	9
2.2 Computer Simulation Using First Principles Approaches	17
2.2.1 Solving the Kohn–Sham Equations	18
2.2.2 Ab Initio Molecular Dynamics	20
2.2.3 Calculation of Total Energy	22
2.2.4 Simulated Annealing	25
2.2.5 Tight-Binding Method	25
2.2.6 Embedded-Atom Method	27
2.2.7 Effective Medium Theory	28
2.3 Results	28
2.3.1 Monatomic Metal Clusters	28
2.3.2 Clusters of Semiconductors	54
2.3.3 Doped Clusters of Metals	62
2.3.4 Doped Clusters of Silicon and Carbon	68
2.4 Concluding Remarks	74
References	76

3 Stability of Multiply Charged Transition Metal Clusters

Naoaki Saito, Kazuyoshi Koyama, Mitsumori Tanimoto	89
3.1 Introduction	89
3.2 Experiment and Results	89
3.2.1 Experimental Methods	89
3.2.2 Experimental Results	90
3.3 Theoretical Models	91
3.3.1 Rayleigh Model	91
3.3.2 Q -Value Model	92
3.3.3 Barrier Model	93
3.3.4 Comparing Observations with the Models	94
3.4 Conclusions	96
References	96

Part II Organic Molecules

4 Adsorption of Methanol Molecules on Nickel Cluster Ions

Masahiko Ichihashi, Ramkuber T. Yadav, Tamotsu Kondow	99
4.1 Introduction	99
4.2 Experimental Aspects	100
4.3 Results	102
4.4 Discussion	105
4.4.1 Dynamics of Methanol Adsorption	105
4.4.2 Structure of Adsorbed Methanol Molecule	106
References	107

5 Cluster Investigations in Cyclodextrin Inclusion Compounds: Theory and Experiment

Rodion Belosludov, Takehisa Yoshinari, Tohru Hiwada, Yoshiyuki Kawazoe, Kaoru Ohno, Shin-ichiro Nagasaka	109
5.1 Introduction	109
5.2 Anthracenes	113
5.2.1 Anthracene in CyD	113
5.2.2 Theory of Anthracene in CyD	118
5.2.3 Discussion	121
5.3 SnI_4	122
5.3.1 Single Crystal of SnI_4	122
5.3.2 SnI_4 Cluster in CyD	126
5.3.3 Discussion	127
5.4 Conclusion	129
References	130

Part III Fullerenes and Nanotubes

6 The Nanostructure of C₆₀ Photopolymers

Jun Onoe, Tomonobu Nakayama, Aiko Nakao, Yuichi Hashi, Keivan Esfarjani, Kaoru Ohno, Yoshiyuki Kawazoe, Masakazu Aono, Kazuo Takeuchi	135
6.1 Introduction	135
6.2 In Situ Technique for Studying the Nanostructure of C ₆₀ Photopolymers	137
6.2.1 FTIR	137
6.2.2 XPS	139
6.2.3 STM	140
6.3 Photopolymerization in a C ₆₀ Film	141
6.3.1 FTIR: Crosslinking Structure	141
6.3.2 XPS: Degree of Photopolymerization	146
6.3.3 STM: Local Nanostructure	156
6.4 Photoinduced Coalescence in a K _x C ₆₀ Film	157
6.4.1 Experiment	158
6.4.2 FTMS: Evidence for Coalescence Between C ₆₀ Molecules ..	159
6.4.3 FTIR: Evidence for the Existence of C ₁₂₀ Bucky Peanuts ..	161
6.4.4 Effect of Potassium Doping on C ₆₀ Photopolymerization ...	165
6.5 Concluding Remarks	166
References	166

7 Formation of Foreign-Atom-Doped Fullerenes

Tsutomu Ohtsuki, Kaoru Ohno	171
7.1 Introduction	171
7.2 Experimental Procedures	172
7.2.1 Sample Preparation	172
7.2.2 Charged-Particle and High-Energy Bremsstrahlung Irradiation	172
7.2.3 Chemical Separation and γ -Ray Measurement	174
7.3 Results	175
7.3.1 Radiochromatogram of Noble Gas Elements (Kr and Xe) ..	175
7.3.2 Radiochromatogram of 4B and 5B Elements (Ge and As) ..	176
7.3.3 Radiochromatogram of Alkali, Alkali-Earth and Transition Metals (Na, Ca, Sc, V, Cr, Mn, Co, Ni and Zn) ..	177
7.4 Discussion	179
7.4.1 Product Materials	179
7.4.2 Molecular Dynamics Simulation	181
7.4.3 Scenario for Foreign Atom Implantation	184
7.5 Conclusion	184
References	185

8 Electronic, Transport and Mechanical Properties of Carbon Nanotubes

Keivan Esfarjani, Amir A. Farajian, Yuichi Hashi, Yoshiyuki Kawazoe . 187

8.1	Introduction	187
8.2	Geometry and Electronic Structure of Carbon Nanotubes	188
8.3	Effect of Doping on Electronic Structure	194
8.4	Transport Properties of N-P Doped Nanotubes	200
8.5	Mechanical Properties of Carbon Nanotubes	206
8.6	Defects in Nanotubes and Their Effect on Mechanical Properties	212
8.7	Molecular Dynamics Simulation of Defect Formation	214
8.8	Conclusion	218
	References	218

9 Nanostructural Characterization of Inorganic Materials by High-Resolution Electron Microscopy

Takeo Oku . 221

9.1	Introduction	221
9.2	Sample Preparation and Structure Analysis	222
9.3	Atomic Disordering and Local Model of YB ₅₆	224
9.3.1	HREM along [100] and [111] of YB ₅₆	224
9.3.2	Local Yttrium Atom Arrangement Observed along [100]	232
9.3.3	Oxygen and Mercury Ordering in HgTlBa ₂ CuO _x	236
9.3.4	Effectiveness of R_{HREM} Values	241
9.4	Conclusion	242
	References	243

Part IV Theory and Computer Simulation

10 Phase Behavior in Systems of Large Molecules

Masayuki Hasegawa . 247

10.1	Introduction	247
10.2	Theoretical and Simulation Methods	250
10.2.1	Integral Equation Theory	251
10.2.2	Thermodynamic Perturbation Theory	253
10.2.3	Density Functional Theory	254
10.2.4	Simulation Methods	258
10.3	High Temperature Phase Diagram of C ₆₀	260
10.4	Phase Behaviour of Model Systems	266
10.4.1	HSAY System	266
10.4.2	m - n Potential System	269
10.5	Summary and Conclusions	272
	References	273

11 Formation of Free Clusters and Their Structures: Molecular Dynamics Simulations

Tamio Ikeshoji	277
11.1 Introduction	277
11.2 Formation Process for Magic Number Clusters with van der Waals Interaction	278
11.2.1 Lennard–Jones Potential	278
11.2.2 Rare Gas Clusters	279
11.2.3 MD Simulation for Formation of Magic Number Clusters . .	281
11.3 Formation of Carbon Clusters and C ₆₀	282
11.3.1 C ₆₀	282
11.3.2 Formation of Various 60-Atom Carbon Clusters	283
11.4 Metal Clusters	285
11.5 Water Molecular Clusters	285
11.5.1 Potential Models for Water Molecules	285
11.5.2 Formation of Water Molecule Clusters	286
11.5.3 Water Molecule Clusters with Caged Structure	286
11.5.4 Quantum Effects in Water Molecule Clusters	289
11.5.5 Water Anion Clusters	289
11.6 Molecular Clusters	291
11.7 Concluding Remarks	292
References	292

12 Extended Ensemble Monte Carlo Method

Masuhiko Mikami	295
12.1 Introduction	295
12.2 Present Status and Extensions of Molecular Simulations	296
12.2.1 Structural Analysis of Antiferroelectric Liquid Crystalline MHPOBC	296
12.2.2 Pressure-Induced Structural Phase Transition of AlPO ₄ . .	297
12.2.3 Extensions of Molecular Simulations	298
12.3 Extended Ensemble Monte Carlo Method	299
12.4 Results and Discussion	302
12.4.1 Multiple Temperature–Isobaric Ensemble Method	302
12.4.2 Isothermal–Multiple Pressure Ensemble Method	304
12.4.3 Multiple Temperature and Pressure Ensemble Method	305
12.5 Conclusion	307
References	307

13 Molecular Dynamics Simulation for Deformation Dynamics of Ni/Ni₃Al Composite with FGM or NFGM Type Interface

Tomoyasu Aihara, Tomoyoshi Sho, Yoshiyuki Kawazoe	309
13.1 Introduction	309

XII Contents

13.2 Simulation Procedure	311
13.3 Results and Discussion	313
13.3.1 Ni/Ni ₃ Al FGM Crystal	313
13.3.2 Ni/Ni ₃ Al Nanocomposite	315
13.4 Conclusion	321
References	322
 14 Size-Dependent Evolution of Conduction-Electron Excitations in Small Spherical Particles	
Takeshi Inaoka	323
14.1 Introduction	323
14.2 Theory	325
14.2.1 Electronic Excitations in a Small Spherical Particle	326
14.2.2 Electronic Excitations on a Spherical Surface	327
14.3 Analysis	328
14.3.1 Surface Plasmon in a Small Spherical Particle	328
14.3.2 Electronic Excitations on a Spherical Surface and on a Flat Plane	334
14.4 Concluding Remarks	338
References	338
Index	341

Clusters and Nanomaterials

Theory and Experiment

Kawazoe, Y.; Kondow, T.; Ohno, K. (Eds.)

2002, XVI, 346 p., Hardcover

ISBN: 978-3-540-41805-4
