Table of Contents

Preface v
List of Contributors xv

Part I Introducing *Macaulay 2*

Ideals, Varieties and *Macaulay 2* 3
Bernd Sturmfels
1 A Curve in Affine Three-Space 3
2 Intersecting Our Curve With a Surface 4
3 Changing the Ambient Polynomial Ring 6
4 Monomials Under the Staircase 8
5 Pennies, Nickels, Dimes and Quarters 12
References 15

Projective Geometry and Homological Algebra 17
David Eisenbud
1 The Twisted Cubic 18
2 The Cotangent Bundle of $\mathbb{P}^3$ 20
3 The Cotangent Bundle of a Projective Variety 24
4 Intersections by Serre's Method 26
5 A Mystery Variety in $\mathbb{P}^3$ 28
Appendix A. How the "Mystery Variety" was Made 37
References 40

Data Types, Functions, and Programming 41
Daniel R. Grayson and Michael E. Stillman
1 Basic Data Types 41
2 Control Structures 44
3 Input and Output 46
4 Hash Tables 48
5 Methods 52
6 Pointers to the Source Code 53
References 53

Teaching the Geometry of Schemes 55
Gregory G. Smith and Bernd Sturmfels
1 Distinguished Open Sets 55
2 Irreducibility 56
3 Singular Points 58

4 Fields of Definition 60
5 Multiplicity 61
6 Flat Families 62
7 Bézout's Theorem 63
8 Constructing Blow-ups 64
9 A Classic Blow-up 65
10 Fano Schemes 68
References 70

Part II Mathematical Computations

Monomial Ideals 73
Serkan Hoşten and Gregory G. Smith
1 The Basics of Monomial Ideals 74
2 Primary Decomposition 77
3 Standard Pairs 83
4 Generic Initial Ideals 89
5 The Chain Property 95
References 99

From Enumerative Geometry to Solving Systems of Polynomial Equations 101
Frank Sottile
1 Introduction 101
2 Solving Systems of Polynomials 103
3 Some Enumerative Geometry 112
4 Schubert Calculus 114
5 The 12 Lines: Reprise 121
References 128

Resolutions and Cohomology over Complete Intersections 131
Luchezar L. Avramov and Daniel R. Grayson
1 Matrix Factorizations 133
2 Graded Algebras 139
3 Universal Homotopies 141
4 Cohomology Operators 145
5 Computation of Ext Modules 150
6 Invariants of Modules 157
7 Invariants of Pairs of Modules 170
Appendix A. Gradings 176
References 177

Algorithms for the Toric Hilbert Scheme 179
Michael Stillman, Bernd Sturmfels, and Rekha Thomas
1 Generating Monomial Ideals 182
2 Polyhedral Geometry 188
3 Local Equations 193
4 The Coherent Component of the Toric Hilbert Scheme 199
Appendix A. Fourier-Motzkin Elimination 206
Appendix B. Minimal Presentation of Rings 211
References 213

Sheaf Algorithms Using the Exterior Algebra 215
Wolfram Decker and David Eisenbud
1 Introduction 215
2 Basics of the Bernstein-Gel'fand-Gel'fand Correspondence 218
3 The Cohomology and the Tate Resolution of a Sheaf 222
4 Cohomology and Vector Bundles 226
5 Cohomology and Monads 230
6 The Beilinson Monad 236
7 Examples 241
References 247

Needles in a Haystack: Special Varieties via Small Fields 251
Frank-Olaf Schreyer and Fabio Tonoli
1 How to Make Random Curves up to Genus 14 253
2 Comparing Green's Conjecture for Curves and Points 263
3 Pfaffian Calabi-Yau Threefolds in $\mathbb{P}^6$ 267
References 277

***D*-modules and Cohomology of Varieties** 281
Uli Walther
1 Introduction 282
2 The Weyl Algebra and Gröbner Bases 285
3 Bernstein-Sato Polynomials and Localization 292
4 Local Cohomology Computations 304
5 Implementation, Examples, Questions 313
References 321

Computations in Algebraic Geometry with Macaulay 2

Eisenbud, D.; Grayson, D.R.; Stillman, M.; Sturmfels, B. (Eds.)

2002, XV, 329 p. 1 illus., Hardcover
ISBN: 978-3-540-42230-3
