

Contents

1. Elementary Excitations in Solids	1
1.1 Energy Band Structure in Crystalline Materials	2
1.2 $k \cdot p$ Method	11
1.3 Numerical Methods of Electron Energy Band Calculation	14
1.4 Phonons	16
1.4.1 Bose-Einstein Statistics	19
1.4.2 Fermi-Dirac Statistics	19
1.5 Plasmons	20
1.6 Magnetic Excitations	22
1.6.1 Magnons	24
1.7 Excitons	26
1.7.1 Frenkel Excitons	26
1.7.2 Wannier-Mott Excitons	27
1.7.3 Interactions Between Excitons	30
1.7.4 Bound Excitons and Excitonic Complexes	31
1.8 Polarons	31
1.9 Polaritons	35
References	36
2. Optical Transitions	37
2.1 The Quantization of the Electromagnetic Radiation	37
2.2 Transition Probabilities	39
2.2.1 Optical Properties of Crystalline Materials	42
2.2.2 Mechanisms for Spectral Line Broadening	44
2.2.2.1 Lorentzian Broadening of Spectral Lines	44
2.2.2.2 Gaussian Broadening of Spectral Line	45
2.2.2.3 Voigt Profile	46
2.2.3 Multipolar Contributions to the Interaction Hamiltonian	46
2.3 Optical Constants of Solids	47
2.3.1 Kramers-Krönig Relations	50
2.3.2 Drude-Lorentz Theory of the Electrically Charged Oscillators	51
2.3.3 Sum Rule	54

2.3.4	Microscopic Origin of Absorption.....	55
2.3.5	Absorption Mechanisms.....	56
2.3.5.1	Band-to-Band Light Absorption: Direct and Allowed Absorption.....	56
2.3.5.2	Band-to-Band Direct, Forbidden Transitions.....	57
2.3.5.3	Band-to-Band Indirect, Allowed Transitions.....	57
2.3.5.4	Band-to-Band Indirect, Forbidden Transitions.....	58
2.3.5.5	Effects That Can Appear at Band-to-Band Absorption.....	59
2.3.5.6	Intraband Absorption.....	60
2.3.5.7	Absorption on Free Carriers.....	61
2.3.5.8	Absorption on Wannier–Mott Excitons.....	62
2.3.5.9	Indirect Excitonic Absorption.....	63
2.3.5.10	Biexciton Production Through Photon Absorption....	64
2.3.5.11	Light Absorption on Phonons.....	65
2.3.6	Optical Properties of Solids in External Magnetic Fields.....	66
2.3.6.1	Energy Levels in Magnetic Field.....	66
2.3.6.2	Interaction of Electromagnetic Radiation with a System in a Magnetic Field.....	67
2.3.6.3	Light Interaction with Metals in Magnetic Field.....	71
2.3.6.4	Phenomena at Low Frequencies.....	73
2.3.6.5	The Shubnikov–de Haas Effect.....	75
2.4	Photoluminescence.....	75
2.5	Inelastic Light Scattering.....	78
2.5.1	Raman Scattering.....	81
2.5.2	Brillouin Scattering.....	88
2.6	Nonlinear Optical Response of Solids.....	92
2.6.1	Nonlinear Raman Effect.....	95
2.6.1.1	Stimulated Raman Effect.....	95
2.6.1.2	Inverse Raman Scattering.....	97
2.6.1.3	Hyper-Raman Effect.....	97
2.6.1.4	Coherent Anti-Stokes Raman Scattering (CARS).....	98
2.7	Optical Methods for the Characterization of Light-Matter Interaction.....	99
2.7.1	Transmission/Reflection Spectroscopy.....	101
2.7.2	Modulated Reflectance and Transmittance.....	103
2.7.3	Pump-Probe Spectroscopy.....	104
2.7.4	Amplitude and Phase Spectroscopy.....	105
2.7.5	Photoluminescence.....	108
2.7.6	Light Scattering.....	110
2.7.7	Four-Wave Mixing.....	112
2.7.7.1	Optical Bloch Equations.....	114
2.7.7.2	Quantum Beats and Polarization Beats.....	117
2.7.8	Spectral Hole Burning.....	118

2.7.9 Fluorescence Line Narrowing.....	120
2.7.10 Magneto-Optical Kerr Effect.....	121
2.8 Line Identification.....	122
References.....	124
3. Optical Properties of Impurities in Solids.....	127
3.1 Electronic Structure of Isolated Atoms.....	127
3.2 Ions in Crystals.....	129
3.3 Frank-Condon Principle for Defects with Large Orbits.....	137
3.4 Jahn-Teller Effect.....	138
3.5 Interactions Between Ions.....	138
3.6 Spatial Migration.....	142
3.7 Optical Properties of the Rare-Earth Ions.....	143
3.7.1 Judd-Ofelt Theory of One and Two Photon Transitions.....	144
3.7.2 Optical Spectra of Rare-Earth Ions.....	146
3.7.3 Interaction Processes for Rare-Earth Ions.....	153
3.8 Transition Metal Ions.....	154
3.8.1 Optical Properties of Transition Metal Ions.....	155
3.8.2 Iron-Group Ion Pairs.....	158
3.9 Diluted Magnetic Semiconductors.....	158
3.10 Manganites.....	165
3.11 Color Centers.....	167
3.12 Filled-Shell Ions.....	169
3.13 Optical Properties of Donors and Acceptors in Semiconductors.....	170
References.....	177
4. Bulk Materials.....	181
4.1 Electronic Structure.....	181
4.2 Excitons in Bulk Semiconductors.....	186
4.3 Anharmonic Effects.....	190
4.4 Isotope Effects.....	192
4.5 Effects Due to Alloying.....	193
4.6 Deformation Potentials.....	194
4.7 Optical Determination of Magnetic Properties.....	196
4.8 Rotational Spectra of Solids.....	199
4.9 Many-Body Effects.....	200
4.10 Coupled Excitations.....	202
4.11 Relaxation Phenomena in Bulk Semiconductors.....	205
4.11.1 Exciton Relaxation.....	205
4.11.2 Carrier Relaxation.....	208
4.11.3 Phonon Relaxation.....	213
4.12 Optical Properties of Metals.....	214
4.13 Phase Transitions.....	220
References.....	231

5. Optical Properties of Interfaces and Thin Films	235
5.1 Surface Effects	236
5.2 Thin Films	243
5.2.1 Magnetic Thin Films	246
References	250
6. Low-Dimensional Structures	253
6.1 Low-Dimensional Semiconductor Heterostructures	254
6.1.1 Quantum Well Excitons	261
6.2 Optical Properties of Low-Dimensional Semiconductor Heterostructures	263
6.2.1 Intraband Absorption	263
6.2.2 Excitonic Absorption	266
6.2.3 Luminescence	267
6.2.4 Scattering in Low-Dimensional Heterostructures	268
6.2.5 Intersubband Optical Transitions	269
6.2.6 Depolarization Shift and Coulomb Renormalization	270
6.2.7 Radiative Intraband Transitions in Heterostructures	270
6.2.8 Collective Excitations	271
6.2.9 Nonlinear Optics	272
6.3 Optical Characterization of Low-Dimensional Semiconductor Heterostructures	272
6.3.1 Confinement Effects	272
6.3.2 Optical Determination Electronic Structure Parameters	278
6.3.3 Determination of Internal Electric Fields	286
6.3.4 Diffusion	288
6.3.5 Optical Properties of Excitons	289
6.3.6 Biexcitons	296
6.3.7 Magnetic Properties	298
6.3.8 Collective Excitations	306
6.3.9 Coupled Excitations	307
6.3.10 Quantum Microcavities	308
6.3.11 Relaxation Phenomena in Low Dimensional Structures	311
6.3.12 Many-Body Effects	318
6.3.13 Coupled Quantum Wells	320
6.3.14 Carbon Nanotubes	324
6.4 Optical Properties of Superlattices	325
6.4.1 Band Structure	328
6.4.2 Excitons in Superlattices	336
6.4.3 Other Parameters	340
6.5 Nanoparticles	342
References	347

7. Optical Properties of Disordered Materials.....	353
7.1 Disordered Alloys.....	354
7.2 Disordered Superlattices.....	359
7.3 Rough Surfaces.....	361
7.4 Polycrystalline and Nanocrystalline Materials.....	362
7.5 Continuous-Network Structures.....	371
7.6 Optical Properties of Amorphous Materials.....	371
7.6.1 Theory of Electronic States in Amorphous Semiconductors...	372
7.6.2 General Optical Properties of Amorphous Semiconductors...	374
7.6.3 Tetrahedrally Coordinated Amorphous Semiconductors.....	380
7.6.4 Chalcogenide Glasses.....	391
7.6.5 Other Amorphous Materials.....	401
References.....	404
 8. Optical Properties of High-Temperature Superconductors.....	 407
8.1 High-Temperature Superconductors.....	410
8.2 Optical Methods for HTS Investigation.....	417
8.2.1 Anisotropy of Optical Response.....	417
8.2.2 Observation of Superconducting Transition.....	419
8.2.3 Symmetry of Superconducting Gap.....	422
8.2.4 Non-BCS Behavior.....	426
8.2.5 BCS-Like Behavior.....	430
8.2.6 HTS Dynamics.....	430
8.2.7 Pseudogap.....	431
References.....	438
 Index.....	 441
 Index of Materials.....	 447

Optical Characterization of Solids

Dragoman, D.; Dragoman, M.

2002, XVI, 452 p., Hardcover

ISBN: 978-3-540-41803-0
