Introduction	3
1 Thermodynamic Fundamentals	5
1.1 Definitions	5
1.2 Geometrical representation of phase equilibrium	8
1.2.1 One-component systems	8
1.2.1.1 P - T phase diagram	8
1.2.1.2 Three-dimensional P - V - T diagram	10
1.2.1.3 Phase processes	12
1.2.1.4 Polymorphism and metastable states	15
1.2.2 Binary systems	20
1.2.2.1 Evolution of P - T - X phase diagrams	20
1.2.2.2 The P - T - X space model	23
1.2.2.3 Methods of graphical representation	25
1.2.2.4 Types of P - T - X phase diagrams of binary systems	26
1.2.2.5 Miscibility gap in the solid phase	35
1.2.2.6 Polymorphism of components	40
1.2.2.7 Metastable states in the P - T - X phase space	55
1.2.2.8 Formation of a binary compound	65
2 Experimental Methods of Investigating P-T-X Phase Equilibrium	91
2.1 Indirect methods	92
2.1.1 Static methods	92
2.1.2 Dynamic methods	95
2.2 Direct vapor pressure measurement	96
2.2.1 Membrane manometers	97
2.3 Vapor pressure scanning	100
3 Experimental Data on P-T-X Phase Diagrams and Non-stoichiometry ...	105
3.1 Semiconductor systems	105
3.1.1 II-VI compounds	105
3.1.1.1 Zinc chalcogenides	106
3.1.1.2 Cadmium chalcogenides	110
3.1.1.3 Mercury chalcogenides	132
3.1.1.4 Ternary II-VI systems	135
3.1.2 III-VI compounds	137

3.1.3	IV–VI compounds.....	144
3.1.3.1	Silicon–chalcogen systems	144
3.1.3.2	Germanium–chalcogen systems.....	145
3.1.3.3	Tin–chalcogen systems	148
3.1.3.4	Lead–chalcogen systems.....	152
3.1.4	V–VI compounds.....	156
3.1.4.1	Arsenic chalcogenides.....	156
3.1.4.2	Antimony chalcogenides.....	156
3.1.4.3	Bismuth chalcogenides	156
3.1.5	VI–VI compounds.....	159
3.1.6	III–V compounds	166
3.1.7	II–V compounds	169
3.1.7.1	Zinc phosphides	170
3.1.7.2	Cadmium phosphides.....	171
3.1.7.3	Zinc arsenides	172
3.1.7.4	Cadmium arsenides.....	188
3.2	Oxide systems	210
3.2.1	High-temperature oxides.....	210
3.2.2	High- T_c superconductors	218
Conclusion		235
