## Part I Atomic and Optical Clocks

---

### Application of Atomic Clocks

Norman F. Ramsey .....	3
1 Introduction .....	3
2 Applications .....	4
2.1 Spectroscopy .....	4
2.2 Very Long Baseline Interferometry (VLBI) in Radio Astronomy.....	4
2.3 Pulsar Periods.....	5
2.4 Variability of Earth's Rotation Rate and of Other Periodic Phenomena .....	5
2.5 Tests of Constancy of the Fine Structure Constant, $\alpha$ .....	5
2.6 Precision Navigation .....	6
2.7 Earth's Crustal Dynamics.....	6
2.8 Navigation in Outer Space .....	7
2.9 Expressions of Other Physical Quantities in Terms of Time ..	7
2.10 Tests of the Special and General Theories of Relativity .....	7
3 Conclusions.....	8
References .....	8

### Achievements in Optical Frequency Metrology

Thomas Udem and Allister I. Ferguson .....	9
1 Introduction .....	9
2 The Traditional Way.....	10
3 New Attempts .....	10
4 The Comb.....	12
5 The Prehistory of the Laser Comb .....	13
6 The Return of the Pulsed Laser Comb .....	15
7 Finally, the Breakthrough .....	16

8	The Plug & Play Optical Synthesizer! . . . . .	18
9	The All-Optical Clock . . . . .	20
10	Conclusion . . . . .	20
	References . . . . .	21
<b>Towards an Optical Hydrogen Clock</b>		
	Lorenz Willmann and Daniel Kleppner . . . . .	23
1	Research on Trapped Hydrogen . . . . .	23
2	High-Resolution Spectroscopy of Ultracold Hydrogen . . . . .	24
	2.1 Cold Collision Frequency Shift . . . . .	25
	2.2 $2S$ – $nS$ Transitions . . . . .	26
3	An Optical Hydrogen Frequency Standard . . . . .	28
	3.1 The Ultimate Precision: a Two-Photon Laser Clock . . . . .	29
	Acknowledgements . . . . .	30
	References . . . . .	30
<b>Methane Frequency Standard for Precision Measurements</b>		
	Sergey N. Bagayev and Alexander K. Dmitriyev . . . . .	33
1	Introduction . . . . .	33
2	Principles of Operation and Parameters of the Frequency Standard . . . . .	33
3	Laser Frequency Standards with an Intracavity Mirror Telescopic Light Beam Expander . . . . .	38
4	Prospects for Improving the Methane Standard . . . . .	40
	Acknowledgements . . . . .	41
	References . . . . .	41
<b>The Parametric Frequency-Interval Divider</b>		
	Harald R. Telle and Burghard Lipphardt . . . . .	43
1	Introduction . . . . .	43
2	Principle . . . . .	44
3	Division of Optical Frequency Intervals . . . . .	47
4	Conclusion . . . . .	49
	References . . . . .	50
<b>External Laser Stabilization</b>		
	John L. Hall . . . . .	51
1	The Perpetual Quest for Better Resolution and the Required Narrow Laser Linewidths . . . . .	51
2	The Dye Laser's Fast-Changing Frequency . . . . .	52
3	Theodor Buys the Speed Requirement – the a Posteriori External Laser Correction Scheme . . . . .	53
4	Adding the External EOM . . . . .	54
5	Doubly Correcting . . . . .	54

6	A Delay Line Can Speed Things Up? .....	55
7	Analysis Needed .....	55
8	Theodor Gets “Programming Fever” .....	56
9	The Summary of this Epoch is Two-Fold .....	57
10	A Still Better Way? .....	59
	Acknowledgements .....	59
	References .....	59

### **Miniaturized Laser Magnetometers and Clocks**

	Robert Wynands.....	61
1	Introduction .....	61
2	Operating Principle: Dark-Line Resonances .....	62
3	Atomic Clocks .....	65
	3.1 Experimental Setup for the Clock .....	65
	3.2 Atomic Clock Results .....	67
4	Magnetometry .....	70
	4.1 Experimental Setup for the Magnetometer .....	71
5	Gradiometer .....	73
6	Conclusion .....	74
	Acknowledgements .....	76
	References .....	76

---

## **Part II At the Limits of High Resolution Spectroscopy**

---

### **High-Noise, Low-Resolution Spectroscopy**

	Steven Chu .....	81
	References .....	94

### **Two-Photon Spectroscopy of Hydrogen**

	François Biraben and Lucile Julien .....	97
1	Introduction .....	97
2	The 1S–2S Transition .....	97
3	Spectroscopy of the 2S– $n$ S and 2S– $n$ D Transitions .....	100
4	The Rydberg Constant Today .....	102
5	Conclusion and Prospects .....	103
	References .....	103

### **Precision Spectroscopy on the Lyman- $\alpha$ Transitions of H and He**

	Kjeld S.E. Eikema, Wim Ubachs, Wim Vassen, and Wim Hogervorst ..	107
1	Introduction .....	107
2	The 1S–2P Lyman- $\alpha$ Transition in Hydrogen .....	108
3	The 1 <sup>1</sup> S–2 <sup>1</sup> P Lyman- $\alpha$ Transition in Helium .....	111

4	Outlook .....	113
	References .....	113
<b>Towards Laser Spectroscopy of Antihydrogen</b>		
	Jochen Walz .....	115
1	The Antiproton Decelerator (AD) at CERN .....	115
2	The Antihydrogen Trap (ATRAP) Experiment .....	116
3	Source of Continuous Coherent Lyman- $\alpha$ Radiation .....	119
4	Conclusion .....	120
	Acknowledgements .....	120
	References .....	120
<b>Ramseyfication of the Resonant Nonlinear Faraday Effect</b>		
	Antoine Weis .....	123
1	Introduction .....	123
2	The Resonant Linear Faraday Effect .....	123
3	The Resonant Nonlinear Faraday Effect .....	125
	3.1 Line Shape and Strength of the NLFE .....	126
	3.2 Faraday-Ramsey Spectroscopy .....	127
4	Applications of Faraday-Ramsey Spectroscopy .....	128
	4.1 Linear Stark Effect: the Aharonov-Casher Phase Shift .....	128
	4.2 Measurement of Electric Tensor Polarizabilities in the Alkalis .....	129
5	Personal Remarks and Acknowledgements .....	130
	References .....	130
<b>Sensitive Detection Techniques of Laser Overtone Spectroscopy</b>		
	Wolfgang Demtröder and Thorsten Platz .....	131
1	Introduction .....	131
2	Experimental Setup .....	132
3	Measurements .....	135
4	Conclusion .....	140
	References .....	140
<b>Multiple-Beam Atom Interferometry: An Overview</b>		
	Michael Mei, Sile Nic Chormaic, Sebastian Fray, and Martin Weitz ....	141
1	Introduction .....	141
2	Multiple-Beam Atom Interferometry: Initial Experiments .....	142
3	Generalized Aharonov-Bohm Phase Shifts .....	144
4	Studies of Controlled Decoherence .....	146
5	Multiple-Beam Atom Interferometry with Cold Atoms and Intense Pulses of Light .....	147
6	Conclusion .....	150
	References .....	151

---

### Part III Precision Investigations of Fundamental Physical Problems

---

#### Pursuing Fundamental Physics with Novel Laser Technology

Carl E. Wieman ..... 155

References ..... 163

#### Precision Optical Measurements and Fundamental Constants

Savely G. Karshenboim ..... 165

1 Introduction ..... 165

2 Rydberg Constant and the Lamb Shift in the Hydrogen Atom..... 166

3 Optical Measurements and Variation  
of the Fundamental Constants with Time..... 169

4 Summary ..... 173

Acknowledgement ..... 174

References ..... 175

#### Quantum Electrodynamics and All That

Krzysztof Pachucki ..... 177

1 Basics ..... 177

2 Hydrogen ..... 178

3 Beyond QED ..... 179

Acknowledgements ..... 180

References ..... 180

#### Lasers to Test Fundamental Physics in Space

Reinold Kallenbach ..... 181

1 Fundamental Physics in Space ..... 181

2 Direct Detection of Gravitational Waves in Space..... 185

Acknowledgements ..... 187

References ..... 188

#### Measuring the Birefringence of the QED Vacuum

Siu Au Lee and William M. Fairbank, Jr. .... 189

1 Birefringence of the QED Vacuum ..... 189

2 Experiments ..... 191

2.1 First-Generation Experiment: BNL 840 ..... 191

2.2 Second-Generation Experiments ..... 191

3 Next Generation: Light by Light Scattering  
with Femtosecond Lasers ..... 193

4 Remarks ..... 195

Acknowledgements ..... 195

References ..... 195

**Observing Mechanical Dissipation in Quantum Vacuum:  
An Experimental Challenge**

Astrid Lambrecht .....	197
1 Introduction .....	197
2 An Interpretation in Terms of Parametric Processes .....	199
3 General Treatment .....	201
4 Signatures .....	203
5 Discussion .....	205
References .....	206

**Precision in Length**

Gerd Leuchs .....	209
1 Prologue .....	209
2 The Beam Splitter – the Heart of Each Interferometer .....	210
3 Pictorial Representation of the Field Variables Using Arrows.....	211
4 Interferometer Operating with a Coherent State and Squeezed Vacuum .....	214
5 Interferometer Operating with Intense Amplitude-Squeezed Beams .....	217
Acknowledgements .....	219
References .....	219

---

**Part IV Cold Atoms and Ions**

---

**Probing an Optical Field with Atomic Resolution**

Gerhard R. Guthöhrlein, Matthias Keller, Wolfgang Lange, and Herbert Walther .....	225
1 Prologue .....	225
2 Introduction .....	225
3 Experiment .....	226
4 Conclusion .....	231
References .....	232

**From Spectral Relaxation to Quantified Decoherence**

Christoph Balzer, Thilo Hannemann, Dirk Reiß, Werner Neuhauser, Peter E. Toschek, and Christof Wunderlich .....	233
Acknowledgements .....	240
References .....	241

**Laser Cooling of Trapped Ions**

Ferdinand Schmidt-Kaler, Jürgen Eschner, Rainer Blatt,  
Dietrich Leibfried, Christian Roos, and Giovanna Morigi . . . . . 243

1	Introduction . . . . .	243
2	The Principle of EIT Cooling . . . . .	245
3	Levels and Transitions in $\text{Ca}^+$ . . . . .	247
4	Experimental Setup for EIT Cooling . . . . .	248
5	Measuring the Vibrational Quantum State of an Ion . . . . .	249
5.1	Setting the Power Level for the EIT Beams . . . . .	250
5.2	EIT Cooling Experimental Procedure . . . . .	251
5.3	Cooling Results for a Single Mode of Vibration . . . . .	252
5.4	Cooling of Two Modes . . . . .	253
5.5	EIT Cooling of Linear Ion Strings . . . . .	254
6	Sideband Cooling . . . . .	255
6.1	Principle of Sideband Cooling . . . . .	255
6.2	Experimental Procedure for Sideband Cooling . . . . .	256
6.3	Sideband Cooling Results . . . . .	257
7	State Engineering and Rabi Oscillations . . . . .	258
8	Conclusion . . . . .	259
	Acknowledgements . . . . .	259
	References . . . . .	259

**Conditional Spin Resonance with Trapped Ions**

Christof Wunderlich . . . . . 261

1	Motivation . . . . .	261
2	Trapped Ions and QIP . . . . .	262
2.1	Why is Optical Radiation Used? . . . . .	263
2.2	Spin Resonance . . . . .	264
3	A Modified Ion Trap . . . . .	265
3.1	Adding a Driving Field . . . . .	268
3.2	Spin Resonance with Trapped Ions . . . . .	270
4	Concluding Remarks . . . . .	270
	Acknowledgements . . . . .	271
	References . . . . .	271

**From Diode Laser to Atom Laser**

Tilman Esslinger and Immanuel Bloch . . . . . 275

	Acknowledgement . . . . .	280
	References . . . . .	280

**Optical Components**

**for a Robust Bose–Einstein Condensation Experiment**

Ennio Arimondo and Maria Allegrini ..... 281

1	Introduction .....	281
2	Laser Sources .....	282
2.1	Diode Lasers .....	282
2.2	Cesium D <sub>1</sub> Laser .....	283
3	Frequency Locking .....	284
4	Laser Cooling .....	286
5	Conclusions .....	287
	Acknowledgements .....	288
	References .....	288

**From Atoms to Single Biomolecules**

**Through Bose–Einstein Condensates:**

**Un Saluto da Firenze per Theodor**

Francesco Cataliotti, Sven Burger, Paolo De Natale, Chiara Fort,  
Giovanni Giusfredi, Massimo Inguscio, Francesco Minardi,  
Pablo Cancio Pastor, and Francesco Pavone ..... 291

1	Condensates in an Optical Lattice .....	291
2	Optical and Magnetic Manipulation of Single Biomolecules .....	295
3	Helium Spectroscopy .....	299
	References .....	302

**Cavity Cooling with a Hot Cavity**

Vladan Vuletić ..... 305

1	Introduction .....	305
2	Cavity Cooling with an Intracavity Gain Medium .....	306
2.1	Cavity Cooling Inside a Regenerative Amplifier .....	308
2.2	Cavity Cooling Inside an Injection-Locked Laser .....	309
2.3	Limitations to Cavity Cooling with Intracavity Gain Due to Spontaneous-Emission Noise .....	311
3	Conclusion .....	311
	References .....	312

**Zeeman-Tuned Slowing: Surfing the Resonance Wave**

David H. McIntyre, Shannon K. Mayer, Nancy S. Minarik,  
and Mark H. Shroyer ..... 313

1	Introduction .....	313
2	Zeeman-Tuned Slowing Basics .....	314
3	Zeeman-Tuned Slowing Experiments .....	316
4	Zeeman-Tuned Slowing Simulations .....	317
5	Experiment .....	323

6	Conclusion .....	326
	Acknowledgement .....	327
	References .....	327

### **A New Approach for Laser Cooling of Calcium**

	Andreas Hemmerich .....	329
1	Introduction .....	329
2	Production of Precooled Metastable Atoms .....	330
3	Experimental Apparatus .....	331
4	Flux of Metastable Atoms .....	332
5	Possible Limitations by Cold Collisions .....	333
6	Magneto-Optical Trap for Metastable Atoms .....	335
7	Conclusion .....	339
8	Acknowledgements .....	340
9	Epilog .....	340
	References .....	341

---

## **Part V Nonlinear Optics and Spectroscopy**

---

### **The Design of Enhancement Cavities for Second Harmonic Generation**

	Tim Freegarde and Claus Zimmermann .....	345
1	Introduction .....	345
2	Resonator Geometry .....	346
3	Design Procedure .....	347
	3.1 Selecting the Nonlinear Crystal .....	347
	3.2 Determining the Required Resonator Beam .....	347
	3.3 Solving the Resonator Equations .....	349
	3.4 Extracting the Cavity Dimensions .....	350
	3.5 Mirror Curvature and Angle of Incidence .....	351
	References .....	353

### **Raman Technique for Femtosecond Pulse Generation**

	Stephen E. Harris, Alexei V. Sokolov, David R. Walker, Deniz D. Yavuz, and Guang-Yu Yin .....	355
1	Generation by Phased and Antiphased Molecular States .....	355
2	Phase Control .....	358
	2.1 Light Modulation at Molecular Frequencies .....	358
	2.2 Phase-Controlled Multiphoton Ionization .....	359
3	Multiplicative Technique .....	362
4	Propagation .....	363
5	Connections to Other Work .....	364
	Acknowledgements .....	365
	References .....	365

**High-Order Harmonics and White Light:****Looking for Fringes and Finding Much More**

Marco Bellini ..... 367

1	Introduction	367
2	Spectroscopy with Sequences of Pulses	367
3	High-Order Harmonics	370
4	White Light	374
5	Conclusions	378
	References	379

**MeV Electrons and Positrons****from a Femtosecond Table-Top Laser System**Klaus J. Witte, George D. Tsakiris, Christoph Gahn,  
and Georg Pretzler ..... 381

1	Introduction	381
2	High-Intensity Laser Pulse Interaction with an Underdense Plasma	382
	2.1 Self-Focusing and Channel Formation	382
	2.2 Electron Acceleration	383
3	Generation and Characterization of the Relativistic Electron Beam	384
	3.1 The Experimental Setup	384
	3.2 Experimental Results	386
4	Pair Creation and Positron Detection	388
5	Conclusions	392
	References	393

**Small Molecules in Intense Laser Fields –****Dissociation and Stabilization**

Hartmut Figger, Domagoj Pavicic, and Karsten Sändig ..... 395

1	Introduction	395
2	Measurement Principle and Experimental Setup	398
	2.1 Population Distribution	399
3	Measurements with High Laser Intensity	400
	3.1 Dissociation	400
	3.2 Coulomb Explosion after Photoionization	404
4	Conclusion	406
	Acknowledgements	407
	References	407

**Linear and Nonlinear Raman Spectroscopy of Gases**

Heinz W. Schrötter ..... 409

1	Introduction	409
2	Linear Raman Spectroscopy	409

3	Nonlinear Raman Spectroscopy .....	411
4	Conclusion and Acknowledgement .....	413
	References .....	413

**Nonlinear Properties  
of Laser-Generated Giant Surface Acoustic Wave Pulses  
in Solid Materials**

	Hans A. Schüssler and Alexandre A. Kolomenskii .....	417
1	Introduction .....	417
2	Characterization of Solid Materials .....	418
	2.1 Experimental Arrangement .....	418
	2.2 Measurements .....	419
	2.3 Results .....	419
3	Removal and Adhesion of Fine Particles .....	420
4	Summary .....	421
	Acknowledgements .....	421
	References .....	421

---

**Part VI Quantum Engineering**

---

**Radiative Control and Quantum Engineering:  
Single Atom Wants to Meet Single Photon**

	Dieter Meschede and Victor Gomer .....	425
1	Introduction .....	425
2	Quantum Properties of Single Atom Radiation .....	426
3	Manipulating Atomic Radiation .....	427
4	An Optical Tweezer for Atom Delivery .....	429
	Acknowledgements .....	430
	References .....	431

**Optical Lattices as a Playground  
for Studying Multiparticle Entanglement**

	Hans J. Briegel, Robert Raussendorf, and Axel Schenzle .....	433
1	Introduction .....	433
2	Optical Lattices as Multiatom Interferometers .....	434
3	Cluster States .....	437
4	The One-Way Quantum Computer .....	443
5	Experimental Issues .....	444
	Acknowledgements .....	445
	References .....	445

**Efficient Generation of Polarization-Entangled Photon Pairs  
with a Laser Diode Source**

Christian Kurtsiefer, Markus Oberparleiter, Jürgen Volz,  
and Harald Weinfurter . . . . . 449

1	Efficient Collection of Photon Pairs . . . . .	450
2	The Laser Diode Source . . . . .	454
3	Conclusion . . . . .	457
	Acknowledgements . . . . .	457
	References . . . . .	457

**Small is Beautiful**

Claus Zimmermann . . . . . 459

1	Introduction . . . . .	459
2	Magnetic Microtraps . . . . .	461
3	Loading Microtraps . . . . .	463
4	Adiabatic Transfer . . . . .	464
5	Bose–Einstein Condensation in a Microtrap . . . . .	465
6	Final Remarks . . . . .	468
	References . . . . .	469

**Atomic Looping**

Jakob Reichel and Wolfgang Hänsel . . . . . 471

1	Complex Magnetic Manipulation of Cold Neutral Atoms . . . . .	471
2	A Novel Device . . . . .	473
	References . . . . .	475

**A Toroidal Magnetic Guide for Neutral Atoms**

Leonardo Ricci, Andrea Bertoldi, and Davide Bassi . . . . . 477

1	Introduction . . . . .	477
2	Development of the Toroidal Trap . . . . .	478
3	Tangential MOT . . . . .	482
4	Conclusions . . . . .	484
	References . . . . .	484

**Si<sub>29</sub> Nanoparticles: A New Form of Silicon**

Munir H. Nayfeh . . . . . 487

1	Synthesis of Si Nanoparticles . . . . .	487
2	Emission/Detection of Single Nanoparticles . . . . .	489
3	Optical Properties of Superlattice Material . . . . .	490
4	Structural Prototype of the Particles . . . . .	497
5	Conclusion . . . . .	501
	Acknowledgements . . . . .	502
	References . . . . .	502

**Molecular Self-Assembly**

Wolfgang M. Heckl .....	505
Foreword .....	505
1 Introduction .....	506
2 Directed Molecular Self-Assembly .....	506
3 STM-Imaging of Self-Assembled Organic Molecules .....	507
3.1 Nucleic Acid Bases as Genetically-Based Supramolecular Architectures Coding for Amino Acids .....	507
3.2 Coadsorption of 8-Cyanobiphenyle (8 CB) and Perylen-Tetracarboxyl-Dianhydrid (PTCDA) on HOPG (Highly Oriented Pyrolytic Graphite) .....	513
3.3 Trimesic Acid (TMA) as an Example for a Molecular Host-Guest System .....	515
4 Conclusion .....	516
Acknowledgements .....	516
References .....	516
<b>Subject Index</b> .....	519

Laser Physics at the Limits

Figger, H.; Meschede, D.; Zimmermann, C. (Eds.)

2002, XXXIV, 522 p., Hardcover

ISBN: 978-3-540-42418-5
