

Contents

1. Historical Introduction	1
1.1 Celestial Mechanics	1
1.2 Statistical Mechanics	2
1.3 Dynamical Astronomy	3
1.4 Computer Experiments	4
1.5 The Third Integral	5
1.6 Order and Chaos	6
1.7 Applications to Galaxies	8
1.8 Other applications	9
2. Order and Chaos in General	11
2.1 Terminology and Classification	11
2.1.1 Dynamical Systems	11
2.1.2 Integrable, Chaotic, Ergodic, Mixing, Kolmogorov and Anosov Systems	13
2.1.3 Old and New Classification	17
2.2 Integrable Systems	20
2.2.1 Examples of Integrable Systems	20
2.2.2 Separable Systems	25
2.2.3 Time Dependent Systems	27
2.2.4 Integrals in Velocity-Dependent Potentials and in Maps	29
2.2.5 Stäckel Potentials in 2 Dimensions	30
2.2.6 A Rotating Stäckel Model	36
2.2.7 Stäckel Potentials in 3 Dimensions	37
2.2.8 The Toda Lattice	42
2.2.9 Painlevé Analysis	46
2.2.10 Check of Integrability	48
2.3 The Third Integral	49
2.3.1 Formal Integrals	49
2.3.2 Resonance Cases	54
2.3.3 Construction of the Integrals and of the Normal Forms	58
2.3.4 The Problem of Convergence	62

2.3.5	KAM Theory	67
2.3.6	Nekhoroshev Theory	71
2.3.7	Superexponential Stability	74
2.3.8	Destruction of the Integrals	75
2.3.9	The Third Integral in Periodic Potentials	78
2.3.10	Adiabatic Invariants	82
2.3.11	Other Types of Integrals	86
2.3.12	Rational Solutions. The Prendergast Method	88
2.3.13	The Averaging Method	92
2.4	Periodic Orbits	93
2.4.1	Surfaces of Section	93
2.4.2	Stable and Unstable Periodic Orbits	97
2.4.3	Bifurcations	101
2.4.4	Characteristics	106
2.4.5	The Poincaré–Birkhoff Theorem	111
2.4.6	Theoretical Computation of Periodic Orbits	115
2.5	Systems of Two Degrees of Freedom	122
2.5.1	Forms of the Orbits	122
2.5.2	Invariant Curves	126
2.5.3	Chaotic Orbits	129
2.5.4	Resonant Islands	133
2.5.5	Rotation Numbers	139
2.5.6	Asymptotic Curves and Homoclinic Points	144
2.5.7	Smale Horseshoes	151
2.5.8	Poincaré Recurrence	154
2.5.9	Distribution of Periodic Orbits	158
2.6	Transition from Order to Chaos	168
2.6.1	The Logistic Map	168
2.6.2	Dissipative and Conservative Systems	173
2.6.3	Routes to Chaos	180
2.6.4	Resonance Overlap	185
2.7	The Last KAM Torus	192
2.7.1	Properties of the last KAM torus	192
2.7.2	Methods for Locating the Last KAM Torus	196
2.7.3	Cantori and Stickiness	203
2.7.4	Destruction of the Islands of Stability	213
2.8	Large Perturbations	220
2.8.1	Heteroclinic Points	220
2.8.2	Systems without Escapes	222
2.8.3	The Anisotropic Kepler Problem	227
2.8.4	Converse KAM Theory and the Anti-Integrability Limit	227
2.8.5	Normal Diffusion and Anomalous Diffusion	228
2.8.6	Linear Ergodic Systems	233

2.9	Systems with Escapes	237
2.9.1	Transition to Escape	237
2.9.2	Basins of Escape and Escape Times	244
2.9.3	Chaotic Scattering	248
2.10	Dynamical Spectra	251
2.10.1	Lyapunov Characteristic Numbers	251
2.10.2	Spectra of Stretching Numbers	257
2.10.3	Angular Spectra	262
2.10.4	Explanation of the Forms of the Spectra	265
2.10.5	Distinction Between Ordered and Chaotic Motions ..	270
2.10.6	Frequency Analysis	274
2.10.7	Comparison of Various Methods	277
2.10.8	Spectra of Linear Systems	280
2.10.9	Chaos vs. Randomness and Noise	280
2.10.10	Accuracy of Numerical Orbits. Shadowing.	283
2.11	Systems of Three Degrees of Freedom	284
2.11.1	Periodic Orbits and Stability Types	284
2.11.2	Bifurcations and their Collisions	290
2.11.3	The Krein–Moser Theorem	298
2.11.4	Simple Resonant 3-D Systems	300
2.11.5	Qualitative Changes in 3-D Systems	304
2.11.6	Complex Instability	308
2.11.7	Termination of Sequences of Bifurcations	315
2.11.8	Distribution of Periodic Orbits	318
2.11.9	Periodic and Nonperiodic Orbits Derived Theoretically	322
2.11.10	Ordered and Chaotic Domains	327
2.11.11	4-D Surfaces of Section	332
2.11.12	Nonperiodic Orbits in 4-D Maps	335
2.11.13	Spectra of 4-D Maps	339
2.11.14	Arnold Diffusion	344
2.12	Systems of N Degrees of Freedom	351
2.12.1	The Fermi-Pasta-Ulam Problem	351
2.12.2	N -Body Chains	354
2.12.3	Resonant and Nonresonant Modes	358
2.12.4	A Classical Planck Spectrum	360
2.12.5	Lyapunov Characteristic Numbers and Spectra of N -Body Systems	362
2.12.6	Solitons in Discrete Systems	364
2.12.7	Geodesic Flows	366
2.13	Fractals	369
2.13.1	Simple Fractals	369
2.13.2	Generalized Dimensions	373
2.13.3	Multifractals	375

3. Order and Chaos in Galaxies	377
3.1 Orbits in 2-D Galaxies	377
3.1.1 Types of Orbits. The Main Resonances.	377
3.1.2 Epicyclic Orbits	381
3.1.3 Axisymmetric and Nonaxisymmetric Models	385
3.1.4 The Main Families of Periodic Orbits	390
3.1.5 Short and Long Period Orbits	404
3.1.6 Nonperiodic Orbits	410
3.1.7 Rings, Shocks and Vortices	416
3.1.8 Locating Corotation	419
3.1.9 Escaping Orbits	420
3.2 Orbits in 3-D Galaxies	422
3.2.1 The Main Families of Orbits	422
3.2.2 Polar Rings	426
3.2.3 Warped and Buckled Galaxies	428
3.2.4 Peanut and Box Galaxies	430
3.2.5 Chaotic Orbits in Galaxies	432
3.3 Theoretical Orbits in Galaxies	433
3.3.1 Integrable and Nonintegrable Galactic Models	433
3.3.2 Third Integral in the Meridian Plane	434
3.3.3 Third Integral in Spiral and Barred Galaxies	436
3.3.4 Integrals near Corotation	447
3.3.5 Theoretical Explanation of the Bifurcations and Gaps	455
3.3.6 The Nonlinear Density Wave Theory	461
3.3.7 The Response Density	467
3.3.8 Termination of Bars and Spirals	473
3.3.9 Preference of Trailing Waves	477
3.3.10 Third Integrals in N-Body Systems	479
3.3.11 Orbits in Periodic Potentials	486
3.3.12 Orbits in Evolving Galaxies	489
3.4 Self-Consistent Models	490
3.4.1 Analytical Methods	490
3.4.2 The Schwarzschild Method and its Variants	492
3.4.3 Self-Consistent Models of Elliptical Galaxies	494
3.4.4 Self-Consistent Models of Spiral Galaxies	497
3.4.5 Self-Consistent Models of Barred Galaxies	502
3.5 N-Body Systems	503
3.5.1 Methods of N-Body Simulations	503
3.5.2 Collisional and Collisionless Relaxation	506
3.5.3 Violent Relaxation and Lynden-Bell Statistics	513
3.5.4 Distribution Functions for Spherical N-Body Systems	516
3.5.5 Memory of Initial Conditions	518

3.5.6	Counterrotating Galaxies	520
3.5.7	A One-Dimensional Gravitational Gas	521
3.5.8	Gravothermal Catastrophe	524
3.5.9	Global Dynamics of Galaxies	527
3.6	Dynamical Spectra of Galaxies	529
3.6.1	Dynamical Spectra of Hamiltonian Systems	529
3.6.2	Dynamical Spectra of Oscillating Galaxies	533
3.6.3	Frequency Analysis in Galaxies	535
4.	Other Applications in Dynamical Astronomy	539
4.1	Order and Chaos in the Solar System	539
4.1.1	Order and Chaos in the Restricted Three-Body Problem	539
4.1.2	The Trojan Asteroids	543
4.1.3	The Sitnikov Problem	544
4.1.4	The General Three Body Problem. Collisions	546
4.1.5	Chaos in the Solar System	549
4.1.6	Gaps in the Distribution of Asteroids	552
4.1.7	Stable Chaos	554
4.1.8	Lyapunov Time and Macroscopic Instability Time ...	555
4.2	Relativistic Chaos	556
4.2.1	Chaos in the Case of Two Fixed Black Holes	556
4.2.2	Comparison with the Classical Theory	564
4.2.3	Chaos in Various Relativistic Problems	567
4.3	Chaotic Cosmology	568
4.3.1	The Mixmaster Cosmology	568
4.3.2	The Nonintegrability of the Mixmaster Model	569
4.3.3	Chaos and Order in Other Cosmological Models	572
	Appendix A	575
	Appendix B	579
	Some Open Problems	583
	References	587
	Index	619
