1 Ferromagnetic III-V Semiconductors and Their Heterostructures

Hideo Ohno	1
1.1 Introduction	1
1.2 Preparation of III-V Based Ferromagnetic Semiconductors	2
1.3 Magnetic Properties	4
1.4 Transport Properties	6
1.4.1 The Hall Effect	6
1.4.2 Temperature and Magnetic Field Dependence of Resistivity ..	8
1.5 Carrier-Induced Ferromagnetism	12
1.6 Basic Properties of Ferromagnetic III-V Semiconductor Heterostructures	16
1.7 Spin-Dependent Scattering and Tunnel Magnetoresistance in Trilayer Structures	17
1.8 Ferromagnetic Emitter Resonant Tunneling Diodes	19
1.9 Spin-Injection in Ferromagnetic Semiconductor Heterostructures	21
1.10 Electric-Field Control of Hole-Induced Ferromagnetism	23
1.11 Summary and Outlook	25
References	26

2 Spin Injection and Transport in Micro- and Nanoscale Devices

Hong X. Tang, F.G. Monzon, Friso J. Jedema, Andrei T. Filip, Bart J. van Wees, and Michael L. Roukes	31
2.1 Overview	31
2.2 Background	32
2.2.1 Spin Polarized Tunneling	32
2.2.2 Spin Injection in Clean Bulk Metals	33
2.2.3 Conceptual Picture of Spin Injection	36
2.2.4 Spin Injection in Impure Metal Films	39
2.3 Toward a Semiconducting “Spin Transistor”	40
2.3.1 Why a Spin Transistor?	40
2.3.2 Why Semiconductors?	40

2.3.3	Concept	41
2.3.4	Prerequisites for Realizing a Spin Transistor	42
2.3.5	Spin Lifetime in the Conduction Channel	43
2.3.6	Gate Control of the Spin Orbit Interaction (Theory)	43
2.3.7	Gate Control of the Spin Orbit Interaction (Experiment)	44
2.4	Initial Experiments on Spin Injection	
	in Semiconductor Heterostructures	47
2.4.1	Motivation and Initial Data	47
2.4.2	Local Hall Effect	50
2.4.3	Results from Smaller, Optimized Devices	51
2.5	Spin Injection in Diffusive Systems	55
2.5.1	Basic Model for Spin Transport in Diffusive Systems	56
2.5.2	The F/N Interface	58
2.5.3	Spin Accumulation in Multiterminal Spin Valve Structures	59
2.5.4	Observation of Spin-Injection and Spin-Accumulation	
	in an All-Metal Spin Valve	61
2.5.5	Comparison with the Johnson “Spin Transistor”	62
2.5.6	Future Prospects for Spin Accumulation and Spin Transport	
	in All Metal Devices	63
2.5.7	Spin Injection in a Diffusive Semiconductor	63
2.5.8	Conductivity Mismatch	63
2.5.9	Possible Solutions to Conductivity Mismatch	66
2.6	Spin Transport in the Ballistic Regime	66
2.6.1	Multiprobe Model for Ballistic Spin Polarized Transport	68
2.6.2	Results of Spin Resolved 4-Probe Model	72
2.6.3	8-Probe Model: Junction, Bulk, and Boundary Scattering	75
2.6.4	The Spin Transistor: A Closer Look	77
2.6.5	Other Theoretical Treatments	78
2.7	Projections and Conclusions	79
2.7.1	Retrospective: The Spin Transistor	79
2.7.2	Recent Advances in Spin Transport Across Interfaces	81
2.7.3	Recent Advances in Spin Injection	
	Via Semimagnetic Semiconductors	85
2.7.4	Recent Advances in Spin Propagation in Semiconductors	85
2.7.5	Detection of Nonequilibrium Spin Polarization	86
	References	87
3	Electrical Spin Injection: Spin-Polarized Transport from Magnetic into Non-Magnetic Semiconductors	
	Georg Schmidt and Laurens W. Molenkamp	93
3.1	Introduction	93
3.2	Electrical Spin Injection	94
3.2.1	Diluted Magnetic Semiconductors	94
3.2.2	The Optical Detection of Spin Injection	95

3.2.3	The Spin Aligner LED	96
3.2.4	Experimental Results	97
3.2.5	Exclusion of Side Effects	99
3.2.6	Hole Injection	100
3.3	A Novel Magnetoresistance Effect	101
3.3.1	Theoretical Prediction	101
3.3.2	Device Layout	102
3.3.3	Results and Interpretation	103
3.4	Outlook	104
	References	105
 4 Spin Dynamics in Semiconductors

4.1	Introduction	107
4.2	Fundamentals of Semiconductor Spin Coherence	108
4.2.1	Coherent Ensembles of Spins	109
4.2.2	Mobile Electron Decoherence	
	Via the Spin-Orbit Interaction	110
4.2.3	Sources of Inversion Asymmetry	115
4.2.4	Comparison with Ultrafast Probes of <i>Orbital</i> Coherence	121
4.2.5	Concluding Remarks	123
4.3	Precessional Spin Coherence Times	
	in Bulk and Nanostructure Semiconductors	123
4.3.1	Magnitude of the Fluctuating Field	125
4.3.2	Calculation of the Effective Time for Field Reversal	126
4.3.3	Spin Decoherence Times in Bulk III-V Semiconductors	126
4.3.4	Spin Decoherence in III-V (001) Quantum Wells	127
4.4	Spin Transport	131
4.4.1	Drift-Diffusion Equations	132
4.4.2	Low-Field Motion of Spin Packets	
	in Nonmagnetic Semiconductors	133
4.4.3	Diffusion and Mobility of Packets in GaAs	135
4.4.4	Influence of Many-Body Effects	
	on Low-Field Spin Diffusion	137
4.4.5	Motion of Spin Packets in Spin-Polarized Semiconductors ...	138
4.4.6	High-Field Spin Transport in the Diffusive Regime	139
4.5	Spin Transport in Inhomogeneous Structures	139
4.5.1	Transport Across the Ferromagnet/Semiconductor Boundary	140
4.6	Conclusion	142

7 Spins for Quantum Information Processing

David P. DiVincenzo	221
7.1 Introduction	221
7.1.1 The Requirements	222
7.2 Timeline	224
7.3 Final Thoughts	226
References	227

8 Electron Spins in Quantum Dots as Qubits for Quantum Information Processing

Guido Burkard and Daniel Loss	229
8.1 Introduction	229
8.1.1 Quantum Computing	230
8.1.2 Quantum Communication	231
8.1.3 Quantum Dots	231
8.2 Requirements for Quantum Computing	232
8.2.1 Coherence	232
8.2.2 Slow Spin Relaxation in GaAs Semiconductor Quantum Dots	233
8.2.3 Scalability	236
8.2.4 Switching	236
8.2.5 Quantum Error Correction	238
8.2.6 Gate Precision	239
8.2.7 Initialization	240
8.3 Coupled Quantum Dots as Quantum Gates	240
8.3.1 Lateral Coupling	241
8.3.2 Vertical Coupling	244
8.3.3 Anisotropic Exchange	245
8.3.4 Superexchange	247
8.3.5 Accessing the Exchange Interaction J Between the Spins in Coupled Quantum Dots Via the Kondo Effect	248
8.4 Single-Spin Rotations	250
8.4.1 Local Magnetic Coupling	251
8.4.2 Local g-Factor Coupling	251
8.4.3 Quantum Computing with Exchange Interactions Only	251
8.5 Read-Out of a Single Spin	253
8.5.1 Spontaneous Magnetization	253
8.5.2 Measuring Spin Via Charge	253
8.5.3 Coupled Dots as Entangler	254
8.5.4 Spin Filter	254
8.5.5 Berry Phase Controlled Spin Filter	255
8.5.6 Detection of Single-Spin Decoherence	256
8.5.7 Rabi Oscillations and Pulsed ESR	257

8.5.8 Spin Read-Out	258
8.5.9 Optical Measurements	259
8.6 Quantum Information Processing with Large-Spin Systems	259
8.7 Quantum Communication	260
8.7.1 Andreev Entangler	261
8.7.2 Andreev Entangler with Luttinger Liquid Leads	264
8.7.3 Entangled Electrons in a Fermi Sea	265
8.7.4 Noise of Entangled Electrons	266
8.7.5 Double-Dot with Normal Leads	268
8.7.6 Double-Dot with Superconducting Leads	269
8.7.7 Biexcitons in Coupled Quantum Dots as a Source of Entangled Photons and Electrons	270
8.8 Conclusions	272
 9 Regulated Single Photons and Entangled Photons From a Quantum Dot Microcavity	
Yoshihisa Yamamoto, Matthew Pelton, Charles Santori, Glenn S. Solomon, Oliver Benson, Jelena Vuckovic, and Axel Scherer ..	
9.1 Introduction	277
9.2 Single InAs/GaAs Quantum Dots	279
9.3 Generation of Single Photons	285
9.4 Coupling Single Quantum Dots to Micropost Microcavities	286
9.5 Theoretical Analysis of a Micropost DBR Cavity	293
9.6 Entangled Photon-Pairs from a Single Quantum Dot	298
9.7 Conclusions	303
Index	307

Semiconductor Spintronics and Quantum Computation

Awschalom, D.D.; Loss, D.; Samarth, N. (Eds.)

2002, XV, 311 p., Hardcover
