

Table of Contents

1. Introduction	1
1.1 Motivation	1
1.2 Content	1
2. Basics of the Finite-Difference Method	5
2.1 Representation of a Function by Discrete Values	5
2.2 Representation of a First Derivative	6
2.3 Representation of a Second Derivative	7
2.4 Geometric Interpretation	7
2.5 Taylor Expansion	8
2.6 Consistency and Accuracy	9
2.7 Stability	12
2.8 Complements on Truncation Error	14
3. Application to the Integration of Ordinary Differential Equations	19
3.1 Introduction	19
3.2 The Euler–Cauchy Method	20
3.3 Improved Euler Method	21
3.4 The Runge–Kutta Method	22
3.5 Integration of Polynomials	22
3.6 Boundary Value Problems	23
4. Partial Differential Equations	27
4.1 Introduction	27
4.2 General Classification and Notion of Characteristic Surface	28
4.3 Model Equations and Types	30
4.3.1 Linear Convection Equation	30
4.3.2 The Wave Equation	31
4.3.3 Laplace’s Equation	32
4.3.4 The Heat Equation	33
4.3.5 Burgers’ Equation (Inviscid)	34
4.3.6 Other Examples	35

4.4	Conservation Laws and Jumps for a System of PDEs	35
4.4.1	Jump Conditions	36
4.4.2	Examples	37
5.	Integration of a Linear Hyperbolic Equation	41
5.1	Introduction	41
5.2	The Linear Convection Equation	41
5.2.1	A Centered Scheme	41
5.2.2	An Upwind Scheme	42
5.2.3	The Lax Scheme	43
5.2.4	The Lax-Wendroff Scheme	43
5.2.5	The MacCormack Scheme	44
5.3	The Wave Equation	45
5.3.1	Exact Solution	46
5.3.2	Numerical Scheme, Consistency and Accuracy	47
5.3.3	Numerical Implementation	49
5.3.4	Stability	49
5.4	Implicit Scheme for the Wave Equation	52
6.	Integration of a Linear Parabolic Equation	53
6.1	Introduction	53
6.2	Exact Solution	54
6.3	A Simple Explicit Scheme	55
6.3.1	Consistency and Accuracy	55
6.3.2	Numerical Implementation	56
6.3.3	Stability	57
6.4	Simple Implicit Method	58
6.5	Combined Method A	59
6.6	Solution of a Linear System with Tridiagonal Matrix	59
7.	Integration of a Linear Elliptic Equation	63
7.1	Introduction	63
7.2	Numerical Scheme, Consistency, Accuracy	63
7.3	Matrix Formulation; Direct Solution	64
7.4	Outlook of Iterative Methods	65
7.4.1	The Method of Jacobi	67
7.4.2	The Gauss-Seidel Method	68
7.4.3	The Successive Over-Relaxation Method (SOR)	69
7.5	Other Iterative Methods	71
7.5.1	The SLOR Method	72
7.5.2	ADI Methods	74

8. Finite Difference Scheme for a Convection-Diffusion Equation	75
8.1 Introduction	75
8.2 FTCS Method	76
8.3 The Box and Modified Box Methods	79
8.4 A Mixed-Type Scheme	80
9. The Method of Murman and Cole	81
9.1 Introduction	81
9.2 The Model Problem	81
9.3 The Murman–Cole Scheme (1970)	86
9.4 The Four-Operator Scheme of Murman (1973)	87
10. Treatment of Non-Linearities	93
10.1 Introduction	93
10.2 An Explicit Mixed-Type Scheme	93
10.3 An Implicit Mixed-Type Scheme	96
10.4 Discussion	99
11. Application to a System of Equations	101
11.1 Introduction	101
11.2 The Equations of Gas Dynamics	101
11.3 Jump Conditions	103
11.4 The Riemann Problem	104
11.5 A Box-Scheme for the Equations of Gas Dynamics	105
11.6 Some Results	108
11.7 The Bigger Picture	111
Appendix	113
A. Problems	113
B. Solutions to Problems	139
References	187
Index	189

Computational Aerodynamics and Fluid Dynamics

An Introduction

Chattot, J.-J.

2002, XI, 194 p., Hardcover

ISBN: 978-3-540-43494-8
