

Contents

1	Introduction	1
1.1	Background	2
1.1.1	A vision-guided approach	2
1.1.2	Computer vision and vision-guided mobile robots	3
1.1.3	Applying high-level computer vision to guide mobile robots	4
1.2	Aims of the Research Presented in this Book: A Problem in Robot Vision	4
1.3	The Approach of this Book	5
1.4	About the Chapters	7
2	Related Systems and Ideas	9
2.1	Basic computer vision approaches	9
2.1.1	Frame-based computer vision	10
2.1.2	Active vision	10
2.2	Vision-Guided Mobile Robot Systems	11
2.2.1	Mobile robot subsystems and concepts	12
2.2.2	Mobile robot object recognition	18
2.2.3	Maps and path planning	19
2.2.4	Temporal sequencing for complex tasks	20
2.2.5	Vision-guided mobile robot systems	20
2.2.6	Reactive navigation	22
2.2.7	Model-based vision systems for mobile robots . .	22
2.2.8	Knowledge-based mobile robotic systems	23
2.2.9	Vision-guided mobile robots using stereo	24
2.2.10	Active perception systems for mobile robots . . .	25
2.2.11	Application of vision-guided mobile robots	28
2.3	Computer Vision for Mobile Robots	31

2.3.1	Traditional model-based vision 3D object recognition	32
2.3.2	Shape-from-shading	35
2.3.3	Pose determination	43
2.4	Conclusion	43
3	Embodied Vision For Mobile Robots¹	45
3.1	Introduction	46
3.1.1	Embodiment	46
3.1.2	Phenomena and noumena	47
3.2	The Classical Computer Vision Paradigm	47
3.2.1	Non-classical computer vision	48
3.3	Problems with Classical Computer Vision	49
3.4	Applying Embodied Concepts in Human Vision	51
3.4.1	Models play an analogous role in computer vision	52
3.5	Embodiment of Vision-guided Robots	53
3.5.1	Embodiment, task and environment	54
3.5.2	The role of the task	55
3.5.3	The role of the environment	55
3.6	Embodiment for Vision-guided Robots	55
3.6.1	Physical embodiment	56
3.6.2	Embodiment in a task	57
3.6.3	Embodiment in an environment	58
3.7	Conclusion	59
4	Object Recognition Mobile Robot Guidance	63
4.1	Introduction	63
4.2	System Perspective	65
4.3	Object Recognition	65
4.3.1	Canonical-views	65
4.3.2	Match verification	73
4.3.3	Edge matching	74
4.3.4	Edge-based features for ground-based robots	74
4.3.5	View prediction	77
4.4	Determining Object Pose and Distance	78
4.4.1	Active determination of the sign of θ	82
4.4.2	Error analysis	82
4.5	Conclusion	85

5	Edge Segmentation and Matching	87
5.1	Edge Extraction	87
5.1.1	Edge extraction	89
5.1.2	On the choice of window size and quantisation of ρ and θ	99
5.2	Edge Matching	101
5.2.1	Evaluating matches	101
5.2.2	Spatial elimination	103
5.2.3	Edge coverage	103
5.2.4	Position estimation consistency	105
5.2.5	Geometric verification	105
5.2.6	Quadratic edge extraction	107
5.2.7	Further active processing	107
6	Knowledge Based Shape from Shading	109
6.1	Introduction	110
6.1.1	Motivation and system perspective	111
6.1.2	Assumptions	114
6.1.3	Knowledge-based representation of objects	115
6.2	Using Object Model Knowledge for Shape-From-Shading	115
6.3	A New Boundary Condition for Shape-From-Shading . .	116
6.4	Knowledge-based Implementation	120
6.4.1	Knowledge / frame topology	120
6.4.2	Fact knowledge	121
6.4.3	Procedural knowledge	123
6.4.4	Shape processing rulebase	124
6.5	Experimental Method and Results	124
6.5.1	Synthetic images	124
6.5.2	Real images	130
6.5.3	Domain knowledge	131
6.6	Conclusion	133
7	Supporting Navigation Components	135
7.1	Model-based Path Planning	135
7.1.1	Path planning and obstacle avoidance	142
7.2	Odometry and Obstacle Avoidance Subsystem	142
7.2.1	Obstacle avoidance strategies	143
7.2.2	Coordinate transforms	145

8	Fuzzy Control for Active Perceptual Docking	147
8.1	Introduction	147
8.1.1	Fuzzy control	148
8.1.2	Fuzzy control for mobile robot control	150
8.1.3	TSK fuzzy model	151
8.1.4	Visual motion-based approaches to mobile robots and the docking problem	153
8.2	Direction Control for Robot Docking	154
8.2.1	The log-polar camera	154
8.2.2	Docking for a ground-based robot	155
8.2.3	Noise in the input parameter	157
8.3	A Fuzzy Control Scheme	158
8.4	Results	159
8.5	Conclusion	161
9	System Results and Case Studies	165
9.1	Evaluation of Components	165
9.1.1	Experimental setup	166
9.1.2	View matching	166
9.1.3	Pose determination - power supply	168
9.1.4	Pose determination - model vehicle	180
9.2	Case Studies	183
9.2.1	Moving around the corner of an object	183
9.2.2	Distinguishing a particular object among similar objects	186
9.2.3	Docking	186
9.2.4	Object circumnavigation	188
9.2.5	Obstacle avoidance	190
9.3	Conclusion	191
10	Conclusion	203
10.1	Limitations of the Research Presented and Future Work	204
10.2	Extended quotation from Descartes	207
	Index	231

Knowledge-Based Vision-Guided Robots

Barnes, N.; Liu, Z.-Q.

2002, X, 212 p. 174 illus., Hardcover

ISBN: 978-3-7908-1494-1

A product of Physica-Verlag Heidelberg
