Chapter 1.

Agent-based intelligent information dissemination in dynamically changing environments

H. Sevey and C. Tsatsoulis

1	Introduction	1
2	Overview of the Anticipator	4
3	The Anticipator in an information dissemination system.....	5
4	Profile agents	6
4.1	Profile variable definitions	7
4.2	Instantiation rules.....	7
4.3	Information requests	8
4.4	Event rules	9
5	Profile instantiation	9
6	Parameterized information requests	12
7	Event monitoring agents.....	14
7.1	Event types.....	14
7.1.1	Time-driven events	14
7.1.2	Data-driven events	15
7.2	Time-driven event monitoring agents.....	16
7.3	Data-driven event monitoring agents.....	17
8	An example.....	18
9	Related work.....	21
10	Future work	23
11	Conclusions	24
	Acknowledgments	25
	References	25

Chapter 2.

Automating human information agents

S. Franklin

1	Human information agents	27
2	Autonomous agents	29
3	Global workspace theory.....	30
4	“Conscious” software agents.....	32
5	“Conscious” Mattie	32

6	IDA	37
6.1	Perception	38
6.2	Associative memory	39
6.3	"Consciousness"	41
6.4	Action selection	42
6.5	Constraint satisfaction	45
6.6	Deliberation in action	46
6.7	Voluntary action	49
6.8	Language generation.....	52
7	Conclusions	53
	References	54

Chapter 3.

Knowledge robots for knowledge workers: self-learning agents connecting information and skills

J. Hasebrook, L. Erasmus, and G. Doeben-Henisch

1	Introduction	59
2	If it works, it's not AI	62
3	The artificial brain	65
4	The artificial body	75
5	The artificial environment	76
6	Conclusion	78
	References	79

Chapter 4.

Ontologies in Web intelligence

N. Zhong

1	Introduction	83
2	Representation and categories of ontologies	84
3	Ontologies for Web intelligence.....	86
3.1	The roles of ontologies	86
3.2	Ontology languages	89
4	Automatic construction of ontologies	90
4.1	Text classification.....	91
4.2	Generation of ontology	93
4.3	Refinement of ontology	96
5	Conclusions	97
	Acknowledgment.....	97
	References	97

Chapter 5.

Software agents for Internet-based systems and their design

H.H. Pham

1	Introduction	101
2	Principles of Internet agent-based systems.....	103
2.1	Internet-based components	103
2.2	Agent-based components.....	104
2.3	Internet-agent integration.....	105
3	Classifications of Internet agent-based systems	107
3.1	Task paradigm	107
3.2	Agent type paradigm.....	108
3.3	Architecture paradigm	110
4	Communication and coordination in Internet agent-based systems	113
5	Procedures and technologies for designing Internet agent-based systems	118
6	Internet agents for system design	120
7	Case studies	123
7.1	An IAS for inventory control.....	123
7.1.1	Inventory management problem and its solution.....	123
7.1.2	Build IAS architecture	125
7.1.3	Define computing platform.....	127
7.1.4	Design agents	128
7.1.5	Build communication system.....	129
7.1.6	Coordinate components.....	129
7.1.7	Analyze and evaluate IAS.....	130
7.2	An IAS for E-marketplace.....	131
7.2.1	E-marketplace problem with special focuses and its solution.....	132
7.2.2	Build IAS architecture	132
7.2.3	Define computing platform.....	133
7.2.4	Design agents	134
7.2.5	Build communication system.....	138
7.2.6	Coordinate components.....	139
7.2.7	Analyze and evaluate IAS.....	140
8	Conclusions	142
	Acknowledgments	142
	References	142

Chapter 6.

Compositional design and maintenance of broker agents

C.M. Jonker and J. Treur

1	Introduction	149
2	Electronic commerce and brokering.....	151
3	Compositional design of the generic broker agent.....	152
3.1	Compositional design of multi-agent systems	152
3.1.1	Process composition.....	152
3.1.2	Knowledge composition	153
3.1.3	Relation between process composition and knowledge composition	154
3.2	Design of the generic broker agent.....	154
4	Generic and domain specific knowledge.....	157
4.1	Agent specific task: determine proposals	157
4.2	Agent interaction management	158
4.2.1	Incoming communication	158
4.2.2	Outgoing communication.....	160
4.3	Own process control	161
4.4	World interaction management.....	162
4.5	Maintenance of world and maintenance of agent information	162
5	The behavior.....	162
5.1	Basic functionalities depending on the agent's knowledge..	163
5.2	Reactive, pro-active, and other forms of behavior	165
6	Maintenance by communication.....	167
6.1	Communication of maintenance knowledge.....	167
6.2	Controlling maintenance in own process control	168
7	Discussion.....	169
	Acknowledgments	170
	References	170

Chapter 7.

Collective behavior evolution in a group of cooperating agents

J. Liu and J. Wu

1	Introduction	173
1.1	Related work.....	174
1.1.1	Ant systems	174
1.1.2	Collective behavior learning	174

1.1.3	Application of genetic algorithms in robotics	176
1.2	The organization of the chapter	177
2	Problem statement	178
2.1	What is the collective behavior of an ant system?	178
2.2	What is group behavior learning?	179
3	The proposed approach	180
3.1	The basic ideas	180
3.2	The ants	181
3.3	Performance criterion for collective object-moving	181
3.4	Evolving a collective object-moving behavior	181
4	Collective object-moving by applying repulsive forces	182
4.1	A model of artificial repulsive forces	182
4.2	Moving force and the resulting motion of an object	184
4.3	Chromosome representation	185
4.4	Fitness function	186
4.5	Experiments with simulated ants	187
4.5.1	Task environment	187
4.5.2	Simulation results	187
4.5.3	Generation of a collective moving behavior	189
4.5.4	Adaptation to new goals	189
4.5.5	Discussions	191
5	Collective object-moving by exerting external contact forces and torques	193
5.1	Interaction between three ants and an object	193
5.2	Case 1: moving a round object	194
5.2.1	Moving position and direction	194
5.2.2	Moving force and torque	194
5.3	Case 2: Moving a square object	195
5.3.1	The coordinate system	195
5.3.2	Moving force and torque	196
5.4	Chromosome representation	196
5.5	Fitness functions	197
5.6	Experiments with simulated ants	198
5.6.1	Task environment	198
5.6.2	Adaptation to new goals	198
5.6.3	Simulation results	198
5.6.4	Adaptation to dynamically changing goals	205
5.6.5	Discussions	208
6	Conclusions	210

Acknowledgments	212
References	213

Chapter 8.

Applications of information agent systems

M. Klusch, H.-J. Bürkert, P. Funk, A. Gerber, and C. Russ

1	Introduction	217
2	Holonic agents for telematics	220
2.1	TELETRUCK – a dispatch support system	220
2.2	TeleService – mobile agents for remote applications	222
3	CASA: agents for mobile integrated commerce in forestry and agriculture	225
3.1	Motivation	225
3.2	CASA agents and services	226
3.2.1	Holonic agent system of the CASA ITN	226
3.2.2	Agent-based services of the CASA ITN	228
3.3	Application scenarios	229
3.3.1	Mobile timber sales: services, interactions, and agents ...	229
3.3.2	Relevant holonic agents in the MHS scenario	231
3.3.3	Implementation	231
4	MAS-R/3: a multi-agent coordination infrastructure for retail supply webs	232
4.1	Motivation	232
4.2	The supply web application domain	233
4.3	<i>Agentification of supply web entities</i>	235
4.4	Warehouse agents	236
4.5	Supply web coordination	236
4.5.1	Coordination policies	236
4.5.2	The supply web coordination server	237
4.5.3	Market-based supply web coordination mechanisms	238
4.6	Future work on MAS-R/3	239
5	Agent-based support of software repositories	239
5.1	Motivation	239
5.2	Domain characteristics and system requirements	240
5.2.1	The repository REPTIL	242
5.2.2	Archive-based agent in the development environment ...	242
5.2.3	The agent in the REPTIL environment	243
5.3	The agent-based approach	244
5.3.1	Agents at the REPTIL site	244

5.3.2 Agents at the archiving server.....244

5.4 Implementation details.....245

5.5 Future work on REPTIL245

Acknowledgments246

References246

Chapter 9.

The use of virtual worlds and animated personas to improve healthcare knowledge and self-care behavior: the case of the Heart-Sense game

B.G. Silverman, J. Holmes, S. Kimmel, C. Branas, D. Ivins, R. Weaver

1 Introduction250

1.1 Behavioral and knowledge issues in healthcare250

1.2 Role for interactive learning systems in the national health picture251

1.3 Overview of game simulators and virtual personas.....251

1.4 Rationale for using the selected domain253

2 Pedagogical plan.....254

2.1 Behavioral theory as applied to delay in seeking care for heart attack symptoms254

2.2 Instructionist vs. constructivist pedagogy.....257

2.3 The engage-instruct-construct-persist training plan258

3 Interactive learning systems and virtual world.....260

3.1 The case base261

3.2 The simulator.....262

3.3 The graphical user interface.....263

4 Animated personas and emotive-cognitive architecture.....264

4.1 Affect theory and emotive drives265

4.2 Merging emotions into higher affect to support cognition ...267

4.3 Task, plan, and decision processor269

4.4 Behavior generator.....270

5 Usage results.....271

6 Evaluation of results and next steps276

7 Conclusion and next steps286

7.1 Contributions to date.....286

7.2 Next steps.....288

Acknowledgments288

References288

Chapter 10.

Using agents to build a practical implementation of the INCA (Intelligent Community Alarm) system

M. Beer, W. Huang, and A. Sixsmith

1	Introduction	295
2	Rationale	297
3	Related work	298
4	Theoretical approach	299
4.1	The problem area addressed	300
4.1.1	Developing an individual care plan	302
4.1.2	Positive care	302
4.1.3	Emergency support	304
4.2	Care management	305
5	The design of the conversation classes	307
6	The benefits of using agents for INCA	311
7	Constructing the demonstrator	313
7.1	Developing conversation class model using UML	313
7.2	Phases of the ZEUS design methodology	314
7.3	User interface design	320
8	Implementation	322
8.1	The agent realization process	322
8.2	Implementing the graphical user interfaces	323
9	Further work	323
10	Conclusions	325
	Acknowledgments	325
	References	326
	Index	329
	List of contributors	333

Intelligent Agents and Their Applications

Chen, Z.; Ichalkaranje, N. (Eds.)

2002, XX, 339 p. 2 illus., Hardcover

ISBN: 978-3-7908-1469-9

A product of Physica-Verlag Heidelberg
