

# Subject Index

- a priori, 43, 46
- advanced action, 170
- algebraic quantum field theory, 117, 259, 260, 267
- appropriate mixtures, 6–9, 13
- approximate truth-values, 195, 200, 201
- Archimedean axiom, 48
- arithmomorphic, *see* concepts, arithmomorphic
- axiomatic method, 37–58
- axiomatics and apriori, 42, 43, 46
- axiomatisation, 54
- axioms
  - for entanglement, 147
  - for quantum theory, 46, 61, 62, 67–69, 71, 72
  - independence of, 46, 48
  - of arithmetic, 45
  - Shannon axioms, 142
  - von Neumann's axioms, 38, 39
- backwards influences, *see* causation, backwards
- Bell correlated state, 264, 265, 268
- Bell operator, 181
- Bell phenomenon, 205–220
- Bell state, 128, 135, 136, 138, 139, 141, 144, 146
- Bell's inequalities, 33, 37, 38, 42, 98, 105, 107, 115, 119, 137, 138, 145, 150, 160, 175, 176, 178–180, 182–184, 205, 211, 215, 219, 242, 259, 263, 267, 317–342
- Bell's theorems, 19–35, 37, 38, 45, 47, 56, 81–84, 87, 97, 100, 137, 153, 160, 171, 176, 215, 228, 236, 237, 241–244, 273, 317, 318, 335, 338
- Bell-CHSH inequalities, 175–184, 317, 318, 337–340
- Bell-type models, 236, 237, 241–244
  - interpretation of probabilities, 243–244
- big bang, 82, 101
- block universe, 112, 114, 252
- Bohm's theory, 51–53
  - as model, 55, 56
  - as picture, 56
- Bohmian mechanics, *see* de Broglie-Bohm theory
- Bohr-Kramers-Slater theory, 26
- Born probability distribution, 82
- bound entangled states, 138, 147
- branching space-time model, *see* BST model
- branching space-times, 108, 115–118, 273–291, 293–315, 317–342
- branching time, 115–117
- BST model, 273, 276, 277, 279–281, 318, 322, 324, 325, 328, 331, 335, 340, 341
- $C^*$ -algebra, 13–15, 44
- categoricity, 45
- causal loops, 235–257
  - chances and frequencies, 235, 237–241, 250, 256
  - Loop I, 240, 241, 255
  - Loop II, 246–251, 255
  - Loop III, 253
  - Loop IV, 254, 255
- causal paradoxes, 224, 235, 237, 246, 250, 255, 256
- causal structures, 115, 118, 295, 304, 309
- causal tense operators, 282
- causal transformation, *see* transformation, causal
- causality, 46, 47, 51, 52, 125, 129, 224, 230, 267, 308
  - as principle of sufficient reason, 41
  - local primitive, 269
  - relativistic, 38, 40, 45, 224
- causally inaccessible, 101, 118

- causation, 223–234, 238, 240, 246, 308
  - backwards, 81, 236, 251–255
  - deterministic, 240, 253
  - deterministic, 239
  - indeterministic, 239, 253
  - superluminal, 101, 293
- cause-like locus, 307–311
- causals causans, 298, 307
- chances, 114, 225, 334, 341
  - and frequencies, *see* causal loops, chances and frequencies
- choice point, 279, 280, 289, 303, 307, 319–326, 329–332, 340
- Cirel'son bound, 181
- classical communication, *see* communication, classical
- classical description, 6–9, 15, 17
- classical extension of quantum mechanics, 205
  - canonical, 205, 211, 213–215
- classical object, 76–78
- classical probability measure, *see* probability theory, classical, probability measure
- classical simulation of entanglement, *see* entanglement, classical simulation of
- classical thermodynamic heat death, *see* heat death, classical thermodynamic
- classicality, 105–107, 175, 176
- coding, *see* super-dense coding
- coexistent POVM, *see* POV measures, coexistent
- Coleman-Hepp model, 44
- collapse, 6–8, 10, 21, 32, 106–108, 115, 118, 119
  - effective, 107, 115, 118, 119
  - hyperplane-dependent, 119
- colouring, 199, 201
- common cause, 81, 125, 136, 170, 224, 251, 259–270, 306, 328–331
  - multiple, 318, 331–336, 338, 339
  - unified, 318, 335–340
- common cause completability, 261–262, 264–267
- common cause incomplete, 261, 264, 265
- common cause, Reichenbachian, *see* Reichenbach's common cause principle
- common common cause, 262–263, 266, 335
- communication, 100, 139, 144
  - classical, 99, 137, 145–148, 150, 188
- communication breakdown, 52–54
- comparative similarity, 283, 286
  - global, 283–287, 289
  - mild, 284, 285, 287, 289
  - strong, 284, 285, 287, 289
  - weak, 284, 285, 287, 290
  - local, 285–286, 289
- completeness, 45
- completeness condition, 107
- completeness of quantum mechanics, 3, 4, 6, 10, 19, 20, 22, 137, 141, 224, 287
- computation, 100, 139
  - quantum, 99
  - subquantum, 99
- concepts
  - arithmomorphic, 53–55
  - dialectical concepts, 53–55
- concrete events, 115, 118, 226, 293
- consistency, 46, 48
  - for decoherent histories, 113, 114
  - internal and external, 45, 48
  - of arithmetic, 48
  - of events, 297
  - of observers' descriptions, 188
  - of probabilities in causal loops, 237, 245, 246, 251, 256
  - of propositions, 297
- consistent events, 297, 300–305, 307, 308, 310, 313, 314
- consistent histories, *see* histories, consistent
- consistent splitting structure, 275, 276, 280
- conspiracy, 81, 100, 163, 170, 251, 337, 338

- contextuality, 82, 96, 201, 202, 228
- contextualized reality criterion, 10–12
- Copenhagen interpretation, 38, 52
- correspondence principle, 26
- cosmic microwave background, 101, 102
- cosmology, 101
- Coulomb field, 76–78
- counterexample, 44, 45, 53
  - global, 41, 45
  - local, 45
- counterfactual, 19, 22, 28, 29, 33, 34, 129–132, 226, 228, 273–291
- counterfactual connective, 283, 290
- covariant transformation, *see* transformation, covariant
- Cramer's theory, 236, 237, 241, 251–256
- criterion of (unsharp) reality, *see* unsharp, reality, criterion of
- de Broglie guidance equation, 82, 91, 231
- de Broglie-Bohm theory, 38–40, 46, 81–83, 90–95, 106, 107, 225, 227, 231–233, 340
  - as model, 51
  - as picture, 40, 41, 45, 46, 51
- de Broglie-Bohm trajectories, 96
- decoherence, 106, 109, 112–118, 127
- decoherence functional, 113, 116
  - backward, 116
  - forward, 116
- decoherent histories, *see* histories, decoherent
- decohering transformation, *see* transformation, decohering
- deepening the foundations (*Tieferlegung*), 48
- degree of nonlocality, 81, 82, 87, 95
  - total, 87, 95, 97
- detailed balancing, 85, 87
- determinism, 46, 107, 117, 293–295
  - partial, 317–342
- dialectical, *see* concepts, dialectical
- Dirac equation, 76, 77
- Dirac measure, 206–208, 214
- dispersion-free state, 11–14, 16, 41–43, 200
- distribution functional, 206, 207, 209, 214
- divergence surfaces, 115, 118, 119, 323, 325, 326, 340
- e-bit, *see* entanglement bit
- effect, 89, 94, 96, 98, 101, 179, 180, 206, 211, 212, 216, 229–232, 240, 241, 268, 308
- effect algebra, 212
- effect-valued measure, 207, 211, 213
- effective collapse, *see* collapse, effective
- eigenstate-eigenvalue link, 6, 8, 22
- electromagnetic field, 77, 78
  - space-like, 78
  - time-like, 78
- elegance, 50
- empiricism, 43, 44
- ensemble decomposition, 42
- entanglement, 32, 69, 83, 99, 137–152
  - classical simulation of, 99
  - measure of, 81, 97, 98, 138, 144, 146–149, 151
  - of distillation, 145–148
  - of formation, 144–147
- entanglement bit, 145, 146
- entropy, 128, 141
  - relative, 143, 147–150
    - classical, 144
    - of entanglement, 147–149
    - quantum, 144, 147
  - Shannon entropy, 141–144
  - von Neumann entropy, 144–147, 149
- EPR argument, 3–6, 13, 20–23, 175, 183–187
- EPR correlations, 205, 219, 259–270, 333, 334, 340
- EPR reality criterion, 4, 5, 10–11, 20–22, 26, 30, 31, 184–186
- EPR state, 6, 13–16, 21, 23, 27–29
- equilibrium
  - quantum, 81, 83, 84, 91, 100–102

- statistical, 81, 100, 101
  - thermal, 83, 101
  - thermodynamic, 150
- equilibrium measure, 85, 87
- Everett's interpretation, 105–122
- exchange symmetry, *see* symmetries, exchange symmetry
- experimental context, 10
- fair sampling, 33
- falsificationism, 55
- fiducial measurement, 62, 63, 70
- field fluctuations, *see* fluctuations, field fluctuations
- field operators, *see* operators, field operators
- Fine's interpretation, 153–161
- Fine's theorem, 176–179, 181, 339
- finite precision measurements, 195–199, 201, 202
- fluctuations
  - field fluctuations, 101
  - quantum, 101, 102
  - thermal, 101
- formal language, 280–287
- formal semantics, 280–283, 286, 288–290
- frame of reference, 20, 23–31, 189, 229–231, 246, 252
- free will criterion, 163–164, 168, 170
- funny business, 293–315
- Gödel's theorem, *see* incompleteness theorem
- GHZ experiment, 153–161
- Gleason theorem, 46, 212
- Gleason-Jauch hypothesis, 46
- GRW model, 38, 52
- H*-theorem, 83
- Hardy state, 129, 130, 132, 288, 290
- heat death
  - classical thermodynamic, 101
  - quantum, 101
- Heisenberg representation, 50, 51, 112, 132–136
- hidden variable model, 81–84, 90, 96, 99, 100, 105, 137, 138, 153, 157–161, 163, 164, 167, 201, 202, 224, 225, 317, 329
- hidden variables, 38, 39, 41–43, 45, 46, 51–53, 55, 56, 81–103, 106, 107, 131, 137, 155, 163, 164, 166, 168, 170, 202, 211, 215, 219, 287, 288, 290, 329, 335
- hidden-variables theory, *see* hidden variable model
- Hilbert's axiomatic method, 40, 41, 46–49
- historical connection, 275, 282, 283, 286
- histories, 106, 108, 113, 116
  - consistent, 112
  - decoherent, 112–119
  - in branching, 273, 274, 276–287, 289, 290, 293–315, 317–321, 323–330, 332, 335, 339–342
- horizon problem, 101
- hyperplane-dependent collapse, *see* collapse, hyperplane-dependent
- ideal measurements, 90, 185, 188, 247
- identity of observers, *see* observers, identity of
- incompatibility, 24–27, 31, 33
- incompleteness theorem, 41, 45, 49
- inconsistent future extensions, 114
- independence of axioms, *see* axioms, independence of
- indeterminism, 38, 45, 107, 115, 117, 293–295, 297, 301, 303, 314, 317–342
- inference to the best explanation, 11
- inflation, 101, 102
- information, 63, 64, 66, 69, 72, 97, 99, 106, 138–144, 148, 149, 179, 188, 189, 207, 208
  - subquantum, 81–103
- information theory, 141–144
  - classical, 141–143
  - quantum, 81, 82, 97, 137, 139, 141, 143–144

- initial event, 293, 294, 296, 297, 301, 302, 304–306, 308, 310–314
- instantaneous signal, 81–84, 99
- insufficient cause, 133
- interpretation of quantum probabilities, *see* probabilities, quantum, interpretation of
- Kantianism, 43
- Kirchhoff's law of radiation, 47
- Kochen-Specker theorem, 82, 137, 154, 195–203
- Lüders measurements, 184–186
- Lakatos's methodology, 55, 56
- Lakatosian research programme, 40, 55–56
- linearity of quantum theory, 70–71, 105, 106
- LOC1 condition, 131, 132, 273, 289–290
- LOC2 condition, 132, 273, 289–290
- local primitive causality, *see* causality, local primitive
- local transformation, *see* transformation, local
- logical empiricism, 43, 44, 51
- long-run frequencies, 236–241, 243, 244, 246, 248–251, 253–256
- Loop I–IV, *see* causal loops, Loop I–IV
- Lorentz covariance, 229–231
