

# TABLE OF CONTENTS

<b>Preface</b>	<b>vii</b>
<b>1. Sociocultural evolution: a concept and its difficulties</b>	<b>1</b>
1.1 A short reflection on the history of social evolutionary thinking	4
1.2 The biological paradigm	10
1.3 A general definition of evolution	19
1.4 Evolutionary social theories and their difficulties	24
<b>2. A theoretical model of sociocultural evolution</b>	<b>39</b>
2.1 Social actors, roles and social systems	39
2.2 Homage à Marx: a theoretical model	50
2.3 Cultures, attractors and problem-solving algorithms	63
2.4 A case study: the emergence of modern science	83
2.5 The hypothesis of sociocultural heterogeneity	92
<b>3. The mathematics of social processes</b>	<b>103</b>
3.1 Social evolution and the geometry of social systems	104
3.2 Mathematical properties of rule sets and the theorem of inequality	118
3.3 Some metatheoretical considerations about evolutionary theories	129
<b>4. A mathematical model of sociocultural evolution</b>	<b>137</b>
4.1 The sociocultural algorithm (SCA) (Together with Jörn Schmidt)	138
4.1.1 The meaning of algorithms	138
4.1.2 The model SCA	140
4.1.3 Discussions and results	148
4.2 Sociocultural matrices and evolutionary principles	162
4.3 A model of creative cognitive ontogenesis (Together with Christina Stoica)	177

<b>5. Conclusions: The logic of Evolution or are there something like historical laws?</b>	<b>201</b>
5.1 The three orders of systems dynamics	201
5.2 The relative inevitability of the Western way	212
5.3 Some final reflections on the predictability of modern societies	218
