| Part I From a Structural Perspective   |      |
| 1  |      |
| Geometry of Deduction via Graphs of Proofs   | 3    |
| <i>Anjolina Grisi de Oliveira and Ruy J. G. B. de Queiroz</i>  |      |
| 1 Motivation   | 4    |
| 1.1 Relevance to proof theory: towards the geometry of natural deduction   | 6    |
| 1.2 Relevance to theoretical computer science: complexity and concurrency  | 8    |
| 2 The idea of studying proofs as geometric objects   | 12   |
| 2.1 Representing proofs in a graph   | 12   |
| 2.2 Some results   | 16   |
| 2.2.1 Elementary results on isomorphisms   | 16   |
| 2.2.2 On the genus of a derivation   | 16   |
| 2.2.3 On the relationship between the notions of direct proof, normal proof and proof, and the subformula property | 17   |
| 3 Proof-nets   | 17   |
| 3.1 Criticisms of natural deduction  | 18   |
| 3.1.1 Classical symmetry   | 18   |
| 3.1.2 Global rules   | 18   |
| 3.1.3 The commutative conversions  | 19   |
| 3.2 Analyzing the sequent calculus   | 19   |
| 3.2.1 The non-determinism of Hauptsatz   | 19   |
| 3.2.2 Redundancies in proofs   | 20   |
| 3.2.3 Non-unicity of proofs  | 20   |
| 3.3 Definition of links  | 21   |

|       |  |     |
|-------|--|-----|
| 3.4   | Proof-structures   | 22  |
| 3.4.1 | Examples   | 23  |
| 3.5   | The soundness criterion                                    | 24  |
| 3.5.1 | No short trip condition                                    | 24  |
| 3.5.2 | Danos–Regnier criterion                                    | 28  |
| 3.5.3 | Asperti criterion  | 30  |
| 3.6   | The soundness of the criteria                              | 30  |
| 3.7   | Cut-elimination  | 34  |
| 4     | Logical flow graphs  | 34  |
| 4.1   | Motivation   | 35  |
| 4.2   | Defining logical flow graphs                               | 36  |
| 4.2.1 | The sequent calculus                                       | 36  |
| 4.2.2 | Building a logical flow graph                              | 36  |
| 4.2.3 | A more precise definition                                  | 38  |
| 4.2.4 | Examples   | 40  |
| 4.3   | Analyzing the cut-elimination process                      | 40  |
| 4.3.1 | An example of expansion after cut-elimination              | 42  |
| 4.4   | Cycles in proofs   | 44  |
| 4.5   | A combinatorial model                                      | 45  |
| 4.5.1 | Optical graphs   | 45  |
| 4.5.2 | The duplication operation                                  | 46  |
| 4.5.3 | Connections with cut-elimination                           | 48  |
| 5     | Multiple-conclusion classical calculi                      | 50  |
| 5.1   | Lack of symmetry in natural deduction                      | 51  |
| 5.2   | Kneale’s tables of development                             | 53  |
| 5.2.1 | Classical and intuitionistic logic                         | 55  |
| 5.2.2 | Some examples  | 55  |
| 5.2.3 | The inadequacy   | 56  |
| 5.3   | Shoesmith and Smiley refinements                           | 57  |
| 5.3.1 | Developments as graph arguments                            | 57  |
| 5.3.2 | Solving the inadequacy                                     | 59  |
| 5.3.3 | Second solution: multiple junction                         | 62  |
| 5.3.4 | Third solution: identification of premises and conclusions | 65  |
| 5.4   | Ungar’s system   | 67  |
| 5.4.1 | The problem of substitution                                | 68  |
| 5.4.2 | Solving the problem of substitution                        | 69  |
| 6     | Finale   | 70  |
| 6.1   | Towards a new perspective: N-graphs                        | 71  |
| 6.1.1 | Proof-graphs   | 72  |
| 6.1.2 | Unsound proof-graphs                                       | 74  |
| 6.1.3 | Global soundness criterion                                 | 78  |
| 6.1.4 | The soundness of the criterion                             | 79  |
| 6.1.5 | Some examples  | 80  |
| 2     |  |     |
|       | Chu’s Construction: A Proof-Theoretic Approach             | 89  |
|       | <i>Gianluigi Bellin</i>                                    |     |
| 1     | Preface  | 89  |
| 2     | The trip translation                                       | 93  |
| 2.1   | Languages, intuitionistic and classical MALL               | 93  |
| 2.2   | The functorial trip translation for MALL                   | 95  |
| 3     | Chu’s construction   | 98  |
| 4     | Proof-nets, trips and translations                         | 100 |

|     |  |     |
|-----|--|-----|
| 4.1 | Proof-nets: basic definitions                                    | 100 |
| 4.2 | Trips and linear $\lambda$ terms                                 | 103 |
| 4.3 | Reduced translations from $\mathbf{CMLL}^-$ to $\mathbf{IMLL}^-$ | 103 |
| 4.4 | Chu's construction in $\mathbf{MLL}$ with units                  | 106 |
| 3   |  |     |
|     | Two Paradigms of Logical Computation in Affine Logic?            | 111 |
|     | <i>Gianluigi Bellin</i>  |     |
| 1   | Introduction   | 112 |
| 2   | Sequent calculus of MAL + Mix                                    | 119 |
| 2.1 | Mix and weakening permutations                                   | 120 |
| 2.2 | Weakening reductions and expansions                              | 121 |
| 3   | Additive mix   | 123 |
| 3.1 | Properties of additive mix                                       | 123 |
| 3.2 | Additive mix: reductions and permutations                        | 124 |
| 4   | Proof-nets for MAL + Mix   | 126 |
| 4.1 | Proof-structures and proof-nets                                  | 126 |
| 4.2 | Computation and elimination of irrelevance                       | 128 |
| 4.3 | Examples and properties of irrelevance elimination               | 131 |
| 4.4 | Mix-elimination  | 134 |
| 5   | Cut-elimination modulo irrelevance                               | 138 |
| 6   | Symmetric reductions require Mix                                 | 141 |
| 4   |  |     |
|     | Proof Systems for $\pi$ -Calculus Logics                         | 145 |
|     | <i>Mads Dam</i>  |     |
| 1   | Introduction   | 146 |
| 2   | Preliminaries on the $\pi$ -calculus                             | 148 |
| 3   | A $\pi$ - $\mu$ -calculus  | 153 |
| 4   | Example specifications   | 159 |
| 5   | Proof system, modal fragment                                     | 162 |
| 5.1 | Basic judgments  | 164 |
| 5.2 | A proof system for the modal fragment                            | 166 |
| 5.3 | Structural rules   | 166 |
| 5.4 | Logical rules  | 168 |
| 5.5 | Rules for equality and inequality                                | 168 |
| 5.6 | Rules for transition modalities                                  | 170 |
| 5.7 | Rules for input/output modalities                                | 174 |
| 5.8 | Examples   | 177 |
| 6   | Soundness and completeness for the modal fragment                | 179 |
| 7   | Proof rules for recursive formulas                               | 180 |
| 7.1 | Rules for fixed point unfolding and approximation                | 181 |
| 7.2 | Rule of discharge  | 183 |
| 8   | Finite control completeness                                      | 188 |
| 9   | Natural numbers  | 192 |
| 10  | Buffers  | 194 |
| 11  | Conclusion   | 196 |

## Part II From a Descriptive Perspective

|   |   |     |
|---|---|-----|
| 5 |   |     |
|   | A Tutorial Introduction to Symbolic Model Checking      | 215 |
|   | <i>David Déharbe</i>                                    |     |
| 1 | Introduction  | 215 |
| 2 | Kripke structures                                       | 216 |
|   | 2.1 Definitions   | 216 |
|   | 2.2 Computation tree                                    | 217 |
| 3 | Temporal logic model checking                           | 218 |
|   | 3.1 Computation tree logic                              | 218 |
|   | 3.1.1 Syntax  | 219 |
|   | 3.1.2 Semantics   | 219 |
|   | 3.2 Algorithm   | 221 |
|   | 3.3 Experimental results and conclusion                 | 225 |
| 4 | Symbolic model checking                                 | 225 |
|   | 4.1 Kripke structures and propositional logic           | 226 |
|   | 4.1.1 Representing states and transitions               | 226 |
|   | 4.1.2 State space traversal                             | 226 |
|   | 4.2 Binary decision diagrams                            | 227 |
|   | 4.3 Algorithms  | 229 |
|   | 4.3.1 Fundamentals of lattices and fixpoints            | 229 |
|   | 4.3.2 Fixpoint characterization of CTL operators        | 230 |
|   | 4.3.3 Results and extensions to symbolic model checking | 232 |
| 5 | Conclusion  | 233 |
| 6 |   |     |
|   | Modal Logics for Finite Graphs                          | 239 |
|   | <i>Mario R. F. Benevides</i>                            |     |
| 1 | Introduction  | 239 |
| 2 | Finite directed graphs                                  | 241 |
|   | 2.1 Language and models                                 | 241 |
|   | 2.2 Proof theory  | 242 |
|   | 2.3 Soundness and completeness results                  | 243 |
| 3 | Finite acyclic directed graphs                          | 244 |
|   | 3.1 Proof theory  | 244 |
|   | 3.2 Canonical models                                    | 245 |
|   | 3.3 Completeness for finite acyclic directed graphs     | 248 |
| 4 | Undirected graphs                                       | 257 |
| 5 | Loopless undirected graphs                              | 257 |
| 6 | Modal definability                                      | 258 |
|   | 6.1 Colouring   | 259 |
|   | 6.2 Hamiltonian graphs                                  | 260 |
|   | 6.3 Eulerian graphs                                     | 260 |
|   | 6.4 Connectivity  | 261 |
|   | 6.5 Planarity   | 261 |
| 7 | $k$ -Colourable graphs                                  | 261 |
|   | 7.1 Completeness for $k$ -colourable graphs             | 263 |
| 8 | Conclusions   | 266 |

|                                       |     |
