

# Contents

<b>Preface</b>	<b>vii</b>
<b>1 Fundamental Concepts</b>	<b>1</b>
1.1 Complementarity and Uncertainty . . . . .	1
(a) Complementarity 2	
(b) The Uncertainty Principle 6	
1.2 Superposition . . . . .	11
(a) The Superposition Principle 11	
(b) Two-Particle States 12	
(c) Two-Particle Interferometry 14	
(d) EPR Correlations 19	
1.3 The Discovery of Quantum Mechanics . . . . .	20
1.4 Problems . . . . .	24
<b>2 The Formal Framework</b>	<b>27</b>
2.1 The Formal Language: Hilbert Space . . . . .	27
(a) Hilbert Space 29	
(b) Dirac's Notation 30	
(c) Operators 32	
(d) Unitary Transformations 35	
(e) Eigenvalues and Eigenvectors 38	
2.2 States and Probabilities . . . . .	39
(a) Quantum States 40	
(b) Measurement Outcomes 43	
(c) Mixtures and the Density Matrix 46	
(d) Entangled States 50	
(e) The Wigner Distribution 52	
2.3 Canonical Quantization . . . . .	54
(a) The Canonical Commutation Rules 54	
(b) Schrödinger Wave Functions 56	
(c) Uncertainty Relations 59	
2.4 The Equations of Motion . . . . .	60
(a) The Schrödinger Picture 60	
(b) The Heisenberg Picture 65	
(c) Time Development of Expectation Values 66	
(d) Time-Energy Uncertainty 67	
(e) The Interaction Picture 70	
2.5 Symmetries and Conservation Laws . . . . .	71
(a) Symmetries and Unitary Transformations 72	
(b) Spatial Translations 73	

	(c) <i>Symmetry Groups</i>	74
	(d) <i>Rotations</i>	76
	(e) <i>Space Reflection and Parity</i>	81
	(f) <i>Gauge Invariance</i>	82
2.6	Propagators and Green's Functions . . . . .	84
	(a) <i>Propagators</i>	84
	(b) <i>Green's Functions</i>	85
	(c) <i>The Free Particle Propagator and Green's Function</i>	87
	(d) <i>Perturbation Theory</i>	89
2.7	The Path Integral . . . . .	92
	(a) <i>The Feynman Path Integral</i>	92
	(b) <i>The Free-Particle Path Integral</i>	95
2.8	Semiclassical Quantum Mechanics . . . . .	98
	(a) <i>Hamilton-Jacobi Theory</i>	99
	(b) <i>The Semiclassical Wave Function</i>	102
	(c) <i>The Semiclassical Propagator</i>	104
	(d) <i>Derivations</i>	106
2.9	Problems . . . . .	109
	<i>Endnotes</i>	111
<b>3</b>	<b>Basic Tools</b>	<b>113</b>
3.1	Angular Momentum: The Spectrum . . . . .	113
3.2	Orbital Angular Momentum . . . . .	116
3.3	Spin . . . . .	120
	(a) <i>Spin <math>\frac{1}{2}</math></i>	121
	(b) <i>Spin 1</i>	125
	(c) <i>Arbitrary Spins</i>	127
3.4	Free-Particle States . . . . .	128
3.5	Addition of Angular Momenta . . . . .	133
	(a) <i>General Results</i>	133
	(b) <i>Adding Spins <math>\frac{1}{2}</math> and Unit Spins</i>	135
	(c) <i>Arbitrary Angular Momenta; Clebsch-Gordan Coefficients</i>	137
	(d) <i>Matrix Elements of Vector Operators</i>	140
3.6	The Two-Body Problem . . . . .	142
	(a) <i>Center-of-Mass and Relative Motion</i>	142
	(b) <i>The Radial Schrödinger Equation: General Case</i>	144
	(c) <i>Bound-State Coulomb Wave Functions</i>	147
3.7	Basic Approximation Methods . . . . .	149
	(a) <i>Stationary-State Perturbation Theory</i>	150
	(b) <i>Degenerate-State Perturbation Theory</i>	153
	(c) <i>Time-Dependent Perturbation Theory</i>	156
	(d) <i>The Golden Rule</i>	159
	(e) <i>The Variational Principle</i>	161
3.8	Problems . . . . .	162
<b>4</b>	<b>Low-Dimensional Systems</b>	<b>165</b>
4.1	Spectroscopy in Two-Level Systems . . . . .	166
	(a) <i>Level Crossings</i>	166
	(b) <i>Resonance Spectroscopy</i>	169

4.2	The Harmonic Oscillator . . . . .	174
	(a) <i>Equations of Motion</i> 174	
	(b) <i>Energy Eigenvalues and Eigenfunctions</i> 175	
	(c) <i>The Forced Oscillator</i> 178	
	(d) <i>Coherent States</i> 181	
	(e) <i>Wigner Distributions</i> 184	
	(f) <i>Propagator and Path Integral</i> 186	
4.3	Motion in a Magnetic Field . . . . .	188
	(a) <i>Equations of Motion and Energy Spectrum</i> 188	
	(b) <i>Eigenstates of Energy and Angular Momentum</i> 190	
	(c) <i>Coherent States</i> 194	
	(d) <i>The Aharonov-Bohm Effect</i> 196	
4.4	Scattering in One Dimension . . . . .	198
	(a) <i>General Properties</i> 198	
	(b) <i>The Delta-Function Potential</i> 202	
	(c) <i>Resonant Transmission and Reflection</i> 204	
	(d) <i>The Exponential Decay Law</i> 213	
4.5	The Semiclassical Approximation . . . . .	216
	(a) <i>The WKB Approximation</i> 217	
	(b) <i>Connection Formulas</i> 218	
	(c) <i>Energy Eigenvalues, Barrier Transmission, and <math>\alpha</math>-Decay</i> 222	
	(d) <i>Exactly Solvable Examples</i> 225	
4.6	Problems . . . . .	228
	<i>Endnotes</i> 233	
<b>5</b>	<b>Hydrogenic Atoms</b>	<b>235</b>
5.1	Qualitative Overview . . . . .	235
5.2	The Kepler Problem . . . . .	238
	(a) <i>The Lenz Vector</i> 238	
	(b) <i>The Energy Spectrum</i> 240	
	(c) <i>The Conservation of <math>\mathbf{M}</math></i> 242	
	(d) <i>Wave Functions</i> 243	
5.3	Fine and Hyperfine Structure . . . . .	245
	(a) <i>Fine Structure</i> 245	
	(b) <i>Hyperfine Structure — General Features</i> 249	
	(c) <i>Magnetic Dipole Hfs</i> 250	
	(d) <i>Electric Quadrupole Hfs</i> 252	
5.4	The Zeeman and Stark Effects . . . . .	254
	(a) <i>Order of Magnitude Estimates</i> 254	
	(b) <i>The <math>n = 2</math> Multiplet</i> 257	
	(c) <i>Strong Fields</i> 260	
5.5	Problems . . . . .	263
	<i>Endnotes</i> 266	
<b>6</b>	<b>Two-Electron Atoms</b>	<b>267</b>
6.1	Two Identical Particles . . . . .	267
	(a) <i>Spin and Statistics</i> 267	
	(b) <i>The Exclusion Principle</i> 269	
	(c) <i>Symmetric and Antisymmetric States</i> 270	

6.2	The Spectrum of Helium . . . . .	272
6.3	Atoms with Two Valence Electrons . . . . .	275
	(a) <i>The Shell Model and Coupling Schemes</i> 275	
	(b) <i>The Configuration <math>p^2</math></i> 276	
6.4	Problems . . . . .	279
	<i>Endnotes</i> 281	
<b>7</b>	<b>Symmetries</b>	<b>283</b>
7.1	Equivalent Descriptions and Wigner's Theorem . . . . .	283
7.2	Time Reversal . . . . .	286
	(a) <i>The Time Reversal Operator</i> 287	
	(b) <i>Spin 0</i> 289	
	(c) <i>Spin <math>\frac{1}{2}</math></i> 290	
7.3	Galileo Transformations . . . . .	292
	(a) <i>Transformation of States: Galileo Invariance</i> 292	
	(b) <i>Mass Differences</i> 295	
7.4	The Rotation Group . . . . .	297
	(a) <i>The Group <math>SO(3)</math></i> 297	
	(b) <i><math>SO(3)</math> and <math>SU(2)</math></i> 299	
	(c) <i>Irreducible Representations of <math>SU(2)</math></i> 301	
	(d) <i><math>D(R)</math> in Terms of Euler Angles</i> 304	
	(e) <i>The Kronecker Product</i> 306	
	(f) <i>Integration over Rotations</i> 307	
7.5	Some Consequences of Symmetry . . . . .	311
	(a) <i>Rotation of Spherical Harmonics</i> 312	
	(b) <i>Helicity States</i> 314	
	(c) <i>Decay Angular Distributions</i> 316	
	(d) <i>Rigid-Body Motion</i> 317	
7.6	Tensor Operators . . . . .	320
	(a) <i>Definition of Tensor Operators</i> 320	
	(b) <i>The Wigner-Eckart Theorem</i> 322	
	(c) <i>Racah Coefficients and 6-j Symbols</i> 324	
7.7	Geometric Phases . . . . .	326
	(a) <i>Spin in Magnetic Field</i> 327	
	(b) <i>Correction to the Adiabatic Approximation</i> 329	
7.8	Problems . . . . .	331
	<i>Endnotes</i> 334	
<b>8</b>	<b>Elastic Scattering</b>	<b>335</b>
8.1	Consequences of Probability and Angular Momentum Conservation . . . . .	335
	(a) <i>Partial Waves</i> 335	
	(b) <i>Hard Sphere Scattering</i> 340	
	(c) <i>Time-Dependent Description and the Optical Theorem</i> 340	
8.2	General Properties of Elastic Amplitudes . . . . .	345
	(a) <i>Integral Equations and the Scattering Amplitude</i> 346	
	(b) <i>A Solvable Example</i> 350	
	(c) <i>Bound-State Poles</i> 353	
	(d) <i>Symmetry Properties of the Amplitude</i> 354	
	(e) <i>Relations Between Laboratory and Center-of-Mass Quantities</i> 356	

8.3	Approximations to Elastic Amplitudes . . . . .	357
	(a) <i>The Born Approximation</i> 358	
	(b) <i>Validity of the Born Approximation</i> 361	
	(c) <i>Short-Wavelength Approximations</i> 364	
8.4	Scattering in a Coulomb Field . . . . .	368
	(a) <i>The Coulomb Scattering Amplitude</i> 368	
	(b) <i>The Influence of a Short-Range Interaction</i> 373	
8.5	Scattering of Particles with Spin . . . . .	376
	(a) <i>Symmetry Properties</i> 377	
	(b) <i>Cross Section and Spin Polarization</i> 378	
	(c) <i>Scattering of a Spin <math>\frac{1}{2}</math> Particle by a Spin 0 Target</i> 379	
8.6	Neutron-Proton Scattering and the Deuteron . . . . .	382
	(a) <i>Low-Energy Neutron-Proton Scattering</i> 383	
	(b) <i>The Deuteron and Low-Energy np Scattering</i> 385	
	(c) <i>Neutron Scattering by the Hydrogen Molecule</i> 388	
	(d) <i>The Tensor Force</i> 390	
8.7	Scattering of Identical Particles . . . . .	392
	(a) <i>Boson-Boson Scattering</i> 392	
	(b) <i>Fermion-Fermion Scattering</i> 395	
8.8	Problems . . . . .	397
<b>9</b>	<b>Inelastic Collisions</b>	<b>403</b>
9.1	Atomic Collision Processes . . . . .	403
	(a) <i>Scattering Amplitudes and Cross Sections</i> 404	
	(b) <i>Elastic Scattering</i> 407	
	(c) <i>Inelastic scattering</i> 409	
	(d) <i>Energy Loss</i> 412	
9.2	The <i>S</i> Matrix . . . . .	414
	(a) <i>Scattering by a Bound Particle</i> 415	
	(b) <i>The <i>S</i> Matrix</i> 417	
	(c) <i>Transition Rates and Cross Sections</i> 421	
9.3	Inelastic Resonances . . . . .	424
	(a) <i>A Solvable Model</i> 424	
	(b) <i>Elastic and Inelastic Cross Sections</i> 428	
9.4	Problems . . . . .	433
	<i>Endnotes</i> 435	
<b>10</b>	<b>Electrodynamics</b>	<b>437</b>
10.1	Quantization of the Free Field . . . . .	437
	(a) <i>The Classical Theory</i> 438	
	(b) <i>Quantization</i> 441	
	(c) <i>Photons</i> 443	
	(d) <i>Space Reflection and Time Reversal</i> 448	
10.2	Causality and Uncertainty in Electrodynamics . . . . .	450
	(a) <i>Commutation Rules: Complementarity</i> 450	
	(b) <i>Uncertainty Relations</i> 452	
10.3	Vacuum Fluctuations . . . . .	454
	(a) <i>The Casimir Effect</i> 455	
	(b) <i>The Lamb Shift</i> 458	

10.4	Radiative Transitions . . . . .	460
	(a) <i>The Interaction Between Field and Sources</i> 461	
	(b) <i>Transition Rates</i> 463	
	(c) <i>Dipole Transitions</i> 466	
10.5	Quantum Optics . . . . .	468
	(a) <i>The Beam Splitter</i> 468	
	(b) <i>Various States of the Field</i> 470	
	(c) <i>Photon Coincidences</i> 474	
10.6	The Photoeffect in Hydrogen . . . . .	476
	(a) <i>High Energies</i> 476	
	(b) <i>The Cross Section Near Threshold</i> 478	
10.7	Scattering of Photons . . . . .	482
10.8	Resonant Scattering and Spontaneous Decay . . . . .	485
	(a) <i>Model Hamiltonian</i> 486	
	(b) <i>The Elastic Scattering Cross Section</i> 488	
	(c) <i>Decay of the Excited State</i> 492	
	(d) <i>The Connection Between Self-Energy and Resonance Width</i> 495	
10.9	Problems . . . . .	496
	<i>Endnotes</i> 501	
<b>11</b>	<b>Systems of Identical Particles</b>	<b>503</b>
11.1	Indistinguishability . . . . .	503
11.2	Second Quantization . . . . .	506
	(a) <i>Bose-Einstein Statistics</i> 507	
	(b) <i>Fermi-Dirac Statistics</i> 513	
	(c) <i>The Equations of Motion</i> 516	
	(d) <i>Distribution Functions</i> 518	
11.3	Ideal Gases . . . . .	519
	(a) <i>The Grand Canonical Ensemble</i> 520	
	(b) <i>The Ideal Fermi Gas</i> 521	
	(c) <i>The Ideal Bose Gas</i> 524	
11.4	The Mean Field Approximation . . . . .	526
	(a) <i>The Dilute Bose-Einstein Condensate</i> 527	
	(b) <i>The Hartree-Fock Equations</i> 530	
11.5	Problems . . . . .	535
<b>12</b>	<b>Interpretation</b>	<b>539</b>
12.1	The Critique of Einstein, Podolsky and Rosen . . . . .	540
12.2	Hidden Variables . . . . .	544
12.3	Bell's Theorem . . . . .	546
	(a) <i>The Spin Singlet State</i> 547	
	(b) <i>Bell's Theorem</i> 548	
	(c) <i>The Clauser-Horne Inequality</i> 550	
	(d) <i>An Experimental Test of Bell's Inequality</i> 551	
12.4	Locality . . . . .	554
12.5	Measurement . . . . .	558
	(a) <i>A Measurement Device</i> 558	
	(b) <i>Coherence and Entropy Following Measurement</i> 562	
	(c) <i>An Optical Analogue to the Stern-Gerlach Experiment</i> 566	

(d) <i>A Delayed Choice Experiment</i>	570
(e) <i>Summation</i>	572
12.6 Problems	574
<i>Endnotes</i>	575
<b>13 Relativistic Quantum Mechanics</b>	<b>577</b>
13.1 Introduction	577
13.2 The Dirac Equation	579
(a) <i>Lorentz Transformations of Spinors</i>	580
(b) <i>The Free-Particle Dirac Equation</i>	584
(c) <i>Charge and Current Densities</i>	587
13.3 Electromagnetic Interaction of a Dirac Particle	589
(a) <i>The Dirac Equation in the Presence of a Field</i>	589
(b) <i>The Magnetic Moment</i>	591
(c) <i>The Fine Structure Hamiltonian</i>	593
(d) <i>Antiparticles and Charge Conjugation</i>	595
13.4 Scattering of Ultra-Relativistic Electrons	597
13.5 Bound States in a Coulomb Field	600
13.6 Problems	605
<i>Endnotes</i>	606
<b>Appendix</b>	<b>607</b>
<b>Index</b>	<b>610</b>
