<b>Preface</b>	<b>vii</b>
<b>Sources and Credits</b>	<b>xi</b>
<b>1 Theoretical Approaches in Physiology</b>	<b>1</b>
Michael C. Mackey and Anne Beuter	
1.1 Introduction . . . . .	1
1.2 A Wee Bit of History to Motivate Things . . . . .	1
1.2.1 Excitable Cells . . . . .	1
1.2.2 Little Nervous Systems . . . . .	4
1.2.3 Some Other Examples . . . . .	5
1.2.4 Impact & Lessons . . . . .	6
1.2.5 Successful Collaborations . . . . .	7
<b>2 Introduction to Dynamics in Nonlinear Difference and Differential Equations</b>	<b>9</b>
Jacques Bélair and Leon Glass	
2.1 Main Concepts in Nonlinear Dynamics . . . . .	10
2.2 Difference Equations in One Dimension . . . . .	12
2.2.1 Stability and Bifurcations . . . . .	13
2.3 Ordinary Differential Equations . . . . .	19
2.3.1 One-Dimensional Nonlinear Differential Equations . . . . .	20
2.3.2 Two-Dimensional Differential Equations . . . . .	22
2.3.3 Three-Dimensional Ordinary Differential Equations . . . . .	26
2.4 Limit Cycles and the Hopf Bifurcation . . . . .	27
2.5 Time-Delay Differential Equations . . . . .	29
2.6 The Poincaré Map . . . . .	31
2.7 Conclusions . . . . .	34
2.8 Computer Exercises: Iterating Finite-Difference Equations . . . . .	34
2.9 Computer Exercises: Geometry of Fixed Points in Two-Dimensional Maps . . . . .	37

<b>3</b>	<b>Bifurcations Involving Fixed Points and Limit Cycles in Biological Systems</b>	<b>41</b>
	Michael R. Guevara	
3.1	Introduction . . . . .	41
3.2	Saddle-Node Bifurcation of Fixed Points . . . . .	42
3.2.1	Bistability in a Neural System . . . . .	42
3.2.2	Saddle-Node Bifurcation of Fixed Points in a One-Dimensional System . . . . .	44
3.2.3	Saddle-Node Bifurcation of Fixed Points in a Two-Dimensional System . . . . .	46
3.2.4	Bistability in a Neural System (Revisited) . . . . .	48
3.2.5	Bistability in Visual Perception . . . . .	48
3.3	Pitchfork Bifurcation of Fixed Points . . . . .	50
3.3.1	Pitchfork Bifurcation of Fixed Points in a One-Dimensional System . . . . .	50
3.3.2	Pitchfork Bifurcation of Fixed Points in a Two-Dimensional System . . . . .	52
3.3.3	The Cusp Catastrophe . . . . .	52
3.4	Transcritical Bifurcation of Fixed Points . . . . .	53
3.4.1	Transcritical Bifurcation of Fixed Points in a One-Dimensional System . . . . .	53
3.4.2	Transcritical Bifurcation of Fixed Points in a Two-Dimensional System . . . . .	55
3.5	Saddle-Node Bifurcation of Limit Cycles . . . . .	57
3.5.1	Annihilation and Single-Pulse Triggering . . . . .	57
3.5.2	Topology of Annihilation and Single-Pulse Triggering . . . . .	58
3.5.3	Saddle-Node Bifurcation of Limit Cycles . . . . .	60
3.5.4	Saddle-Node Bifurcation in the Hodgkin–Huxley Equations . . . . .	61
3.5.5	Hysteresis and Hard Oscillators . . . . .	63
3.5.6	Floquet Multipliers at the Saddle-Node Bifurcation . . . . .	64
3.5.7	Bistability of Periodic Orbits . . . . .	66
3.6	Period-Doubling Bifurcation of Limit Cycles . . . . .	69
3.6.1	Physiological Examples of Period-Doubling Bifurcations . . . . .	69
3.6.2	Theory of Period-Doubling Bifurcations of Limit Cycles . . . . .	70
3.6.3	Floquet Multipliers at the Period-Doubling Bifurcation . . . . .	72
3.7	Torus Bifurcation . . . . .	74
3.8	Homoclinic Bifurcation . . . . .	77
3.9	Conclusions . . . . .	79
3.10	Problems . . . . .	80

3.11	Computer Exercises: Numerical Analysis of Bifurcations Involving Fixed Points . . . . .	82
3.12	Additional Computer Exercises . . . . .	85
<b>4</b>	<b>Dynamics of Excitable Cells</b>	<b>87</b>
	Michael R. Guevara	
4.1	Introduction . . . . .	87
4.2	The Giant Axon of the Squid . . . . .	87
4.2.1	Anatomy of the Giant Axon of the Squid . . . . .	87
4.2.2	Measurement of the Transmembrane Potential . . . . .	88
4.3	Basic Electrophysiology . . . . .	88
4.3.1	Ionic Basis of the Action Potential . . . . .	88
4.3.2	Single-Channel Recording . . . . .	89
4.3.3	The Nernst Potential . . . . .	91
4.3.4	A Linear Membrane . . . . .	92
4.4	Voltage-Clamping . . . . .	93
4.4.1	The Voltage-Clamp Technique . . . . .	93
4.4.2	A Voltage-Clamp Experiment . . . . .	94
4.4.3	Separation of the Various Ionic Currents . . . . .	94
4.5	The Hodgkin–Huxley Formalism . . . . .	95
4.5.1	Single-Channel Recording of the Potassium Current . . . . .	95
4.5.2	Kinetics of the Potassium Current $I_K$ . . . . .	96
4.5.3	Single-Channel Recording of the Sodium Current . . . . .	98
4.5.4	Kinetics of the Sodium Current $I_{Na}$ . . . . .	99
4.5.5	The Hodgkin–Huxley Equations . . . . .	102
4.5.6	The FitzHugh–Nagumo Equations . . . . .	104
4.6	Conclusions . . . . .	105
4.7	Computer Exercises: A Numerical Study on the Hodgkin–Huxley Equations . . . . .	106
4.8	Computer Exercises: A Numerical Study on the FitzHugh–Nagumo Equations . . . . .	115
<b>5</b>	<b>Resetting and Entraining Biological Rhythms</b>	<b>123</b>
	Leon Glass	
5.1	Introduction . . . . .	123
5.2	Mathematical Background . . . . .	125
5.2.1	W-Isochrons and the Perturbation of Biological Oscillations by a Single Stimulus . . . . .	125
5.2.2	Phase Locking of Limit Cycles by Periodic Stimulation . . . . .	128
5.3	The Poincaré Oscillator . . . . .	130
5.4	A Simple Conduction Model . . . . .	136
5.5	Resetting and Entrainment of Cardiac Oscillations . . . . .	140
5.6	Conclusions . . . . .	142

5.7	Acknowledgments . . . . .	144
5.8	Problems . . . . .	145
5.9	Computer Exercises: Resetting Curves for the Poincaré Oscillator . . . . .	146
<b>6</b>	<b>Effects of Noise on Nonlinear Dynamics</b>	<b>149</b>
	André Longtin	
6.1	Introduction . . . . .	149
6.2	Different Kinds of Noise . . . . .	151
6.3	The Langevin Equation . . . . .	152
6.4	Pupil Light Reflex: Deterministic Dynamics . . . . .	155
6.5	Pupil Light Reflex: Stochastic Dynamics . . . . .	159
6.6	Postponement of the Hopf Bifurcation . . . . .	159
6.7	Stochastic Phase Locking . . . . .	162
6.8	The Phenomenology of Skipping . . . . .	165
6.9	Mathematical Models of Skipping . . . . .	167
6.10	Stochastic Resonance . . . . .	172
6.11	Noise May Alter the Shape of Tuning Curves . . . . .	175
6.12	Thermoreceptors . . . . .	178
6.13	Autonomous Stochastic Resonance . . . . .	180
6.14	Conclusions . . . . .	182
6.15	Computer Exercises: Langevin Equation . . . . .	184
6.16	Computer Exercises: Stochastic Resonance . . . . .	186
<b>7</b>	<b>Reentry in Excitable Media</b>	<b>191</b>
	Marc Courtemanche and Alain Vinet	
7.1	Introduction . . . . .	191
7.2	Excitable Cardiac Cell . . . . .	192
	7.2.1 Threshold . . . . .	192
	7.2.2 Action Potential Duration . . . . .	194
	7.2.3 Propagation of Excitation . . . . .	196
	7.2.4 Structure of the Tissue . . . . .	196
7.3	Cellular Automata . . . . .	198
	7.3.1 Wiener and Rosenblueth Model . . . . .	198
	7.3.2 Improvements . . . . .	202
7.4	Iterative and Delay Models . . . . .	203
	7.4.1 Zykov Model on a Ring . . . . .	204
	7.4.2 Delay Equation . . . . .	204
	7.4.3 Circulation on the Ring with Variation of the Action Potential Duration . . . . .	205
	7.4.4 Delay Equation with Dispersion and Restitution . . . . .	206
7.5	Partial Differential Equation Representation of the Circulation . . . . .	212
	7.5.1 Ionic Model . . . . .	212
	7.5.2 One-Dimensional Ring . . . . .	215

7.6	Reentry in Two Dimensions . . . . .	216
7.6.1	Reentry Around an Obstacle . . . . .	216
7.6.2	Simplifying Complex Tissue Structure . . . . .	218
7.6.3	Spiral Breakup . . . . .	219
7.7	Conclusions . . . . .	223
7.8	Computer Exercises: Reentry using Cellular Automata . .	224
<b>8</b>	<b>Cell Replication and Control</b>	<b>233</b>
	Michael C. Mackey, Caroline Haurie, and Jacques Bélair	
8.1	Introduction . . . . .	233
8.2	Regulation of Hematopoiesis . . . . .	235
8.3	Periodic Hematological Disorders . . . . .	237
8.3.1	Uncovering Oscillations . . . . .	237
8.3.2	Cyclical Neutropenia . . . . .	237
8.3.3	Other Periodic Hematological Disorders Associated with Bone Marrow Defects . . . . .	242
8.3.4	Periodic Hematological Disorders of Peripheral Origin . . . . .	244
8.4	Peripheral Control of Neutrophil Production and Cyclical Neutropenia . . . . .	244
8.4.1	Hypotheses for the Origin of Cyclical Neutropenia .	244
8.4.2	Cyclical Neutropenia Is Not Due to Peripheral Destabilization . . . . .	246
8.5	Stem Cell Dynamics and Cyclical Neutropenia . . . . .	256
8.5.1	Understanding Effects of Granulocyte Colony Stimulating Factor in Cyclical Neutropenia . . . . .	259
8.6	Conclusions . . . . .	263
8.7	Computer Exercises: Delay Differential Equations, Erythrocyte Production and Control . . . . .	263
<b>9</b>	<b>Pupil Light Reflex: Delays and Oscillations</b>	<b>271</b>
	John Milton	
9.1	Introduction . . . . .	271
9.2	Where Do Time Delays Come From? . . . . .	271
9.3	Pupil Size . . . . .	273
9.4	Pupil Light Reflex . . . . .	275
9.5	Mathematical Model . . . . .	276
9.6	Stability Analysis . . . . .	279
9.7	Pupil Cycling . . . . .	282
9.8	Localization of the Nonlinearities . . . . .	288
9.8.1	Retinal Ganglion Cell Models . . . . .	290
9.8.2	Iris Musculature Effects . . . . .	290
9.9	Spontaneous Pupil Oscillations? . . . . .	291
9.10	Pupillary Noise . . . . .	292
9.10.1	Noisy Pupillometers . . . . .	293

9.10.2	Parameter Estimation . . . . .	295
9.11	Conclusions . . . . .	296
9.12	Problems . . . . .	296
9.13	Computer Exercises: Pupil-Size Effect and Signal Recovery . . . . .	297
9.14	Computer Exercises: Noise and the Pupil Light Reflex . .	299
<b>10</b>	<b>Data Analysis and Mathematical Modeling of Human Tremor</b>	<b>303</b>
	Anne Beuter, Roderick Edwards, and Michèle S. Titcombe	
10.1	Introduction . . . . .	303
10.2	Background on Tremor . . . . .	304
10.2.1	Definition, Classification, and Measurement of Tremor . . . . .	304
10.2.2	Physiology of Tremor . . . . .	308
10.2.3	Characteristics of Tremor in Patients with Parkinson's Disease . . . . .	310
10.2.4	Conventional Methods Used to Analyze Tremor . .	312
10.2.5	Initial Attempts to Model Human Tremor . . . . .	314
10.3	Linear Time Series Analysis Concepts . . . . .	316
10.3.1	Displacement vs. Velocity vs. Acceleration . . . . .	316
10.3.2	Amplitude . . . . .	320
10.3.3	Frequency Estimation . . . . .	322
10.3.4	Closeness to a Sinusoidal Oscillation . . . . .	323
10.3.5	Amplitude Fluctuations . . . . .	323
10.3.6	Comparison Between Two Time Series . . . . .	324
10.4	Deviations from Linear Stochastic Processes . . . . .	326
10.4.1	Deviations from a Gaussian Distribution . . . . .	326
10.4.2	Morphology . . . . .	327
10.4.3	Deviations from Stochasticity, Linearity, and Stationarity . . . . .	329
10.4.4	Time-Reversal Invariance . . . . .	330
10.4.5	Asymmetric Decay of the Autocorrelation Function . . . . .	330
10.5	Mathematical Models of Parkinsonian Tremor and Its Control . . . . .	332
10.5.1	The Van der Pol Equation . . . . .	332
10.5.2	A Hopfield-Type Neural Network Model . . . . .	333
10.5.3	Dynamical Control of Parkinsonian Tremor by Deep Brain Stimulation . . . . .	335
10.6	Conclusions . . . . .	337
10.7	Computer Exercises: Human Tremor Data Analysis . . . .	339
10.7.1	Exercises: Displacement Versus Velocity Versus Acceleration . . . . .	342

10.7.2	Exercises: Distinguishing Different Types of Tremor . . . . .	347
10.8	Computer Exercises: Neural Network Modeling of Human Tremor . . . . .	350
<b>A</b>	<b>An Introduction to XPP</b>	<b>359</b>
	Michael C. Mackey	
A.1	ODE Files . . . . .	359
A.2	Starting and Quitting XPP . . . . .	361
A.3	Time Series . . . . .	361
A.4	Numerics . . . . .	361
A.5	Graphic Tricks . . . . .	362
	A.5.1 Axis . . . . .	362
	A.5.2 Multiplotting . . . . .	362
	A.5.3 Erasing . . . . .	362
	A.5.4 Printing the Figures . . . . .	363
A.6	Examining the Numbers . . . . .	363
A.7	Changing the Initial Condition . . . . .	363
A.8	Finding the Fixed Points and Their Stability . . . . .	364
A.9	Drawing Nullclines and Direction Field . . . . .	364
A.10	Changing the Parameters . . . . .	364
A.11	Auto . . . . .	365
	A.11.1 Bifurcation Diagram . . . . .	365
	A.11.2 Scrolling Through the Points on the Bifurcation Diagram . . . . .	365
A.12	Saving Auto Diagrams . . . . .	366
<b>B</b>	<b>An Introduction to Matlab</b>	<b>367</b>
	Michèle S. Titcombe and Caroline Haurie	
B.1	Starting and Quitting Matlab . . . . .	367
B.2	Vectors and Matrices . . . . .	368
	B.2.1 Creating Matrices and Vectors . . . . .	368
B.3	Suppressing Output to the Screen (the Semicolon!) . . . . .	369
B.4	Operations on Matrices . . . . .	369
B.5	Programs (M-Files) . . . . .	370
	B.5.1 Script Files . . . . .	370
	B.5.2 Function Files . . . . .	370
B.6	The Help Command . . . . .	372
B.7	Loops . . . . .	372
B.8	Plotting . . . . .	373
	B.8.1 Examples . . . . .	373
	B.8.2 Clearing Figures and Opening New Figures . . . . .	375
	B.8.3 Symbols and Colors for Lines and Points . . . . .	375
B.9	Loading Data . . . . .	375
	B.9.1 Examples . . . . .	376

B.10 Saving Your Work . . . . .	376
<b>C Time Series Analysis</b>	<b>377</b>
Roderick Edwards and Michèle S. Titcombe	
C.1 The Distribution of Data Points . . . . .	377
C.2 Linear Processes . . . . .	379
C.3 Fourier Analysis . . . . .	379
<b>Bibliography</b>	<b>384</b>
<b>Index</b>	<b>427</b>
