Preface	v
Notation	1
1 Introduction	8
1.1 Motivation, Bibliographic History, and an Overview of the book.	8
1.2 Tour through the General Estimation Problem.	16
1.2.1 Estimation in a high-dimensional full data model	17
1.2.2 The curse of dimensionality in the full data model	21
1.2.3 Coarsening at random	23
1.2.4 The curse of dimensionality revisited	27
1.2.5 The observed data model	40
1.2.6 General method for construction of locally efficient estimators	40
1.2.7 Comparison with maximum likelihood estimation	45
1.3 Example: Causal Effect of Air Pollution on Short-Term Asthma Response	48
1.4 Estimating Functions	55
1.4.1 Orthogonal complement of a nuisance tangent space	55
1.4.2 Review of efficiency theory	61
1.4.3 Estimating functions.	62
1.4.4 Orthogonal complement of a nuisance tangent space in an observed data model	64

1.4.5	Basic useful results to compute projections	68
1.5	Robustness of Estimating Functions	69
1.5.1	Robustness of estimating functions against misspecification of linear convex nuisance parameters. . .	69
1.5.2	Double robustness of observed data estimating functions.	77
1.5.3	Understanding double robustness for a general semiparametric model	79
1.6	Doubly robust estimation in censored data models. . . .	81
1.7	Using Cross-Validation to Select Nuisance Parameter Models	93
1.7.1	A semiparametric model selection criterion	94
1.7.2	Forward/backward selection of a nuisance parameter model based on cross-validation with respect to the parameter of interest.	97
1.7.3	Data analysis example: Estimating the causal relationship between boiled water use and diarrhea in HIV-positive men	99
2	General Methodology	102
2.1	The General Model and Overview	102
2.2	Full Data Estimating Functions.	103
2.2.1	Orthogonal complement of the nuisance tangent space in the multivariate generalized linear regression model (MGLM)	105
2.2.2	Orthogonal complement of the nuisance tangent space in the multiplicative intensity model	107
2.2.3	Linking the orthogonal complement of the nuisance tangent space to estimating functions	111
2.3	Mapping into Observed Data Estimating Functions . . .	114
2.3.1	Initial mappings and reparametrizing the full data estimating functions	114
2.3.2	Initial mapping indexed by censoring and protected nuisance parameter	124
2.3.3	Extending a mapping for a restricted censoring model to a complete censoring model	125
2.3.4	Inverse weighting a mapping developed for a restricted censoring model	126
2.3.5	Beating a given RAL estimator	128
2.3.6	Orthogonalizing an initial mapping w.r.t. G : Double robustness	131
2.3.7	Ignoring information on the censoring mechanism improves efficiency	135
2.4	Optimal Mapping into Observed Data Estimating Functions	137

2.4.1	The corresponding estimating equation	139
2.4.2	Discussion of ingredients of a one-step estimator	141
2.5	Guaranteed Improvement Relative to an Initial Estimating Function	142
2.6	Construction of Confidence Intervals	144
2.7	Asymptotics of the One-Step Estimator	145
2.7.1	Asymptotics assuming consistent estimation of the censoring mechanism	146
2.7.2	Proof of Theorem 2.4	150
2.7.3	Asymptotics assuming that either the censoring mechanism or the full data distribution is estimated consistently	151
2.7.4	Proof of Theorem 2.5	152
2.8	The Optimal Index	153
2.8.1	Finding the optimal estimating function among a given class of estimating functions	159
2.9	Estimation of the Optimal Index	166
2.9.1	Reparametrizing the representations of the optimal full data function	167
2.9.2	Estimation of the optimal full data structure estimating function	169
2.10	Locally Efficient Estimation with Score-Operator Representation	170
3	Monotone Censored Data	172
3.1	Data Structure and Model	172
3.1.1	Cause-specific censoring	175
3.2	Examples	176
3.2.1	Right-censored data on a survival time	176
3.2.2	Right-censored data on quality-adjusted survival time	177
3.2.3	Right-censored data on a survival time with reporting delay	179
3.2.4	Univariately right-censored multivariate failure time data	181
3.3	Inverse Probability Censoring Weighted (IPCW) Estimators	183
3.3.1	Identifiability condition	183
3.3.2	Estimation of a marginal multiplicative intensity model	184
3.3.3	Extension to proportional rate models.	191
3.3.4	Projecting on the tangent space of the Cox proportional hazards model of the censoring mechanism	192
3.4	Optimal Mapping into Estimating Functions	195

3.5	Estimation of Q	196
3.5.1	Regression approach: Assuming that the censoring mechanism is correctly specified	197
3.5.2	Maximum likelihood estimation according to a multiplicative intensity model: Doubly robust . .	198
3.5.3	Maximum likelihood estimation for discrete models: Doubly robust	200
3.5.4	Regression approach: Doubly robust	201
3.6	Estimation of the Optimal Index	204
3.6.1	The multivariate generalized regression model . .	205
3.6.2	The multivariate generalized regression model when covariates are always observed	206
3.7	Multivariate failure time regression model	208
3.8	Simulation and data analysis for the nonparametric full data model	211
3.9	Rigorous Analysis of a Bivariate Survival Estimate . . .	217
3.9.1	Proof of Theorem 3.2	221
3.10	Prediction of Survival	224
3.10.1	General methodology	225
3.10.2	Prediction of survival with Regression Trees . . .	230
4	Cross-Sectional Data and Right-Censored Data Combined	232
4.1	Model and General Data Structure	232
4.2	Cause Specific Monitoring Schemes	234
4.2.1	Overview	235
4.3	The Optimal Mapping into Observed Data Estimating Functions	236
4.3.1	Identifiability condition	239
4.3.2	Estimation of a parameter on which we have current status data	241
4.3.3	Estimation of a parameter on which we have right-censored data	243
4.3.4	Estimation of a joint-distribution parameter on which we have current status data and right-censored data	244
4.4	Estimation of the Optimal Index in the MGLM	245
4.5	Example: Current Status Data with Time-Dependent Covariates	246
4.5.1	Regression with current status data	248
4.5.2	Previous work and comparison with our results .	250
4.5.3	An initial estimator	251
4.5.4	The locally efficient one-step estimator	252
4.5.5	Implementation issues	253
4.5.6	Construction of confidence intervals	255

4.5.7	A doubly robust estimator	256
4.5.8	Data-adaptive selection of the location parameter	257
4.5.9	Simulations	257
4.5.10	Example 1: No unmodeled covariate	258
4.5.11	Example 2: Unmodeled covariate	258
4.5.12	Data Analysis: California Partners' Study	260
4.6	Example: Current Status Data on a Process Until Death	262
5	Multivariate Right-Censored Multivariate Data	266
5.1	General Data Structure	266
5.1.1	Modeling the censoring mechanism	268
5.1.2	Overview	270
5.2	Mapping into Observed Data Estimating Functions	271
5.2.1	The initial mapping into observed estimating data functions	271
5.2.2	Generalized Dabrowska estimator of the survival function in the nonparametric full data model	273
5.2.3	Simulation study of the generalized Dabrowska estimator.	275
5.2.4	The proposed mapping into observed data estimating functions	276
5.2.5	Choosing the full data estimating function in MGLM	282
5.3	Bivariate Right-Censored Failure Time Data	282
5.3.1	Introduction	282
5.3.2	Locally efficient estimation with bivariate right-censored data	286
5.3.3	Implementation of the locally efficient estimator	290
5.3.4	Inversion of the information operator	292
5.3.5	Asymptotic performance and confidence intervals	293
5.3.6	Asymptotics	294
5.3.7	Simulation methods and results for the nonparametric full data model	299
5.3.8	Data analysis: Twin age at appendectomy	302
6	Unified Approach for Causal Inference and Censored Data	311
6.1	General Model and Method of Estimation	311
6.2	Causal Inference with Marginal Structural Models	318
6.2.1	Closed Form Formula for the Inverse of the Nonparametric Information Operator in Causal Inference Models.	324
6.3	Double Robustness in Point Treatment MSM	326
6.4	Marginal Structural Model with Right-Censoring	329

6.4.1	Doubly robust estimators in marginal structural models with right-censoring	334
6.4.2	Data Analysis: SPARCS	338
6.4.3	A simulation for estimators of a treatment-specific survival function	343
6.5	Structural Nested Model with Right-Censoring	347
6.5.1	The orthogonal complement of a nuisance tangent space in a structural nested model without censoring	353
6.5.2	A class of estimating functions for the marginal structural nested model	357
6.5.3	Analyzing dynamic treatment regimes	359
6.5.4	Simulation for dynamic regimes in point treatment studies	360
6.6	Right-Censoring with Missingness.	362
6.7	Interval Censored Data	366
6.7.1	Interval censoring and right-censoring combined .	368
