

Contents

Preface	v
1 Two Examples	1
1.1 The (Single) Nonlinear Center	1
1.2 The Nonsemisimple Double-Zero Eigenvalue	21
2 The Splitting Problem for Linear Operators	27
2.1 The Splitting Problem in the Semisimple Case	28
2.2 Splitting by Means of an Inner Product	32
2.3 Nilpotent Operators	34
2.4 Canonical Forms	39
2.5 * An Introduction to $\mathfrak{sl}(2)$ Representation Theory	47
2.6 * Algorithms for the $\mathfrak{sl}(2)$ Splittings	57
2.7 * Obtaining $\mathfrak{sl}(2)$ Triads	63
3 Linear Normal Forms	69
3.1 Perturbations of Matrices	69
3.2 An Introduction to the Five Formats	74
3.3 Normal and Hypernormal Forms When A_0 Is Semisimple	87
3.4 Inner Product and Simplified Normal Forms	99
3.5 * The $\mathfrak{sl}(2)$ Normal Form	118
3.6 Lie Theory and the Generated Formats	129
3.7 Metanormal Forms and k -Determined Hyperbolicity . . .	142

4	Nonlinear Normal Forms	157
4.1	Preliminaries	157
4.2	Settings for Nonlinear Normal Forms	160
4.3	The Direct Formats (1a and 1b)	164
4.4	Lie Theory and the Generated Formats	174
4.5	The Semisimple Normal Form	190
4.6	The Inner Product and Simplified Normal Forms	221
4.7	The Module Structure of Inner Product and Simplified Normal Forms	242
4.8	* The $\mathfrak{sl}(2)$ Normal Form	265
4.9	The Hamiltonian Case	271
4.10	Hypernormal Forms for Vector Fields	283
5	Geometrical Structures in Normal Forms	295
5.1	Preserved Structures in Truncated Normal Forms	297
5.2	Geometrical Structures in the Full System	316
5.3	Error Estimates	323
5.4	The Nilpotent Center Manifold Case	335
6	Selected Topics in Local Bifurcation Theory	339
6.1	Bifurcations from a Single-Zero Eigenvalue: A “Neoclassical” Approach	341
6.2	Bifurcations from a Single-Zero Eigenvalue: A “Modern” Approach	356
6.3	Unfolding the Single-Zero Eigenvalue	366
6.4	Unfolding in the Presence of Generic Quadratic Terms	371
6.5	Bifurcations from a Single Center (Hopf and Degenerate Hopf Bifurcations)	382
6.6	Bifurcations from the Nonsemisimple Double-Zero Eigenvalue (Takens–Bogdanov Bifurcations)	389
6.7	Unfoldings of Mode Interactions	396
A	Rings	405
A.1	Rings, Ideals, and Division	405
A.2	Monomials and Monomial Ideals	412
A.3	Flat Functions and Formal Power Series	421
A.4	Orderings of Monomials	424
A.5	Division in Polynomial Rings; Gröbner Bases	427
A.6	Division in Power Series Rings; Standard Bases	438
A.7	Division in the Ring of Germs	444
B	Modules	447
B.1	Submodules of \mathbb{Z}^n	447
B.2	Modules of Vector Fields	449

C	Format 2b: Generated Recursive (Hori)	451
C.1	Format 2b, Linear Case (for Chapter 3)	451
C.2	Format 2b, Nonlinear Case (for Chapter 4)	457
D	Format 2c: Generated Recursive (Deprit)	463
D.1	Format 2c, Linear Case (for Chapter 3)	463
D.2	Format 2c, Nonlinear Case (for Chapter 4)	471
E	On Some Algorithms in Linear Algebra	477
	References	481
	Index	489

Normal Forms and Unfoldings for Local Dynamical
Systems

Murdock, J.

2003, XX, 500 p., Hardcover

ISBN: 978-0-387-95464-6
