About the Authors ..... *xxi*
About the Technical Reviewer ..... *xxiii*
Acknowledgments ..... *xxv*
Introduction ..... *xxvii*

Chapter 1 ADO.NET Basics *1*

Overview of Microsoft Data Access Technologies *2*
ODBC *2*
DAO *4*
MFC ODBC and DAO Classes *5*
RDO *5*
OLE DB *5*
ADO *6*
ADO.NET *6*
What Is ADO.NET? *7*
Why ADO.NET Was Designed *8*
Advantages of ADO.NET *9*
Single Object-Oriented API *9*
Managed Code *10*
XML Support *10*
Visual Data Components *11*
Performance and Scalability *11*
Comparing ADO.NET and ADO *11*
Connections and Disconnected Data *11*
Recordsets vs. DataSets *12*
XML Support *12*
Overview of ADO.NET Namespaces and Classes *13*
Understanding ADO.NET Components *15*
The Connection Object *16*
The Command Object *17*
The Command Builder *19*
The DataAdapter Object *19*
DataSet Structure *20*
DataSets in DataViews *21*

Writing ADO.NET Applications 22
Choosing a .NET Data Provider 22
Adding Namespace References 23
Establishing a Connection 24
Creating a Command or DataAdapter Object 25
Filling Data to a DataSet or DataReader Object 25
Displaying Data 25
Closing the Connection 26
Creating a Simple ADO.NET Application 26
Using a DataSet to Read Data 28
Summary 31

Chapter 2 Data Components in Visual Studio .NET 33

Creating an ADO.NET Project 33
Using the Server Explorer 34
Adding a New Connection 35
Managing and Viewing Data 36
Using Visual Data Components 37
Understanding Data Connections 38
Understanding Connection Strings 40
Working with SQL DataAdapters 40
Using DataSet and DataView Components 51
Understanding Typed DataSets in VS .NET 51
Understanding the DataView 54
Using the Data Form Wizard 57
Data Form Wizard: Looking under the Hood 66
Understanding MyDS.xsd 67
Understanding DataForm1.vb 67
Summary 71

Chapter 3 ADO.NET in Disconnected Environments 73

Understanding the ADO.NET Architecture 75
Exploring the ADO.NET Class Hierarchy 76
Choosing a Data Provider 80
Understanding ADO.NET Disconnected Classes 81
The System.Data Namespace 81
The System.Data.Common Namespace 82
Working with DataTables 83
The DataColumn 85
The DataRow 94

The DataRelation 99
The DataTable 100
More DataTable Operations 106
The Row and Column Collections 115
The DataRow States and Versions 117
Using DataSet, DataView, and DataViewManager 120
The DataSet: The Heart of ADO.NET 121
Typed and Untyped DataSets 127
The DataView 128
The DataViewManager 132
Summary 133

Chapter 4 ADO.NET in Connected Environments 135

Understanding the Generic Data Provider Model 135
Importing a Namespace 137
Exploring the System.SqlClient Namespace 137
The Connection: Connecting to a Data Source 139
Creating a Connection 139
Understanding the Connection Properties and Methods 140
Opening and Closing a Connection 142
Understanding Connection Pooling 145
Using the CreateCommand and ChangeDatabase Methods 149
The Command: Executing SQL Statements 150
Creating a Command Object 151
Creating and Using OleDbCommand 153
Using the CommandType Enumeration 154
Calling a Stored Procedure 155
Using TableDirect 157
Executing a Command 158
Using Other Command Methods 160
The DataReader: Walking through the Data 160
Initializing a DataReader 161
Understanding DataReader Properties and Methods 161
Reading with the DataReader 162
Interpreting Batches of Queries 164
Understanding Command Behaviors 165
The DataAdapter: Adapting to Your Environment 166
Constructing a DataAdapter Object 166
Understanding DataAdapter Properties 168
Understanding DataAdapter Methods 170
Filling the DataSet 170
Adding a DataTable to a DataSet 172

Looking at a DataAdapter Example 172
Filling the DataAdapter from a Recordset 175
Updating the Database Using the Update Method 176
Table and Column Mapping 178
CommandBuilder: Easing the Work of Programmers 181
Creating a CommandBuilder Object 182
Using SqlCommandBuilder Members 182
Using SqlCommandBuilder 182
Staying within the Parameters 184
The DataSet in Connected Environments 188
Filling a DataSet from Multiple Tables 188
Using a SQL Statement to Read Data from Two or More Tables 190
Adding, Updating, and Deleting Data through the DataSet 190
Accepting and Rejecting Changes through the DataSet 191
Saving Changed Data Only 192
Using a DataSet vs. Using a DataReader 193
Fetching Data Based on Wildcard Characters 194
The DataView in Connected Environments 194
Creating Multiple Views 195
Using Transactions in ADO.NET 200
Using Concurrency in ADO.NET 201
Understanding Rollback, Commit, and Savepoints 204
Executing Batches 206
Summary 208

Chapter 5 Handling ADO.NET Events 209

Working with Connection Events 211
Working with DataAdapter Events 215
Working with DataSet Events 220
Working with DataTable Events 221
Working with XmlDataDocument Events 226
Working with DataView and DataViewManager Events 229
Summary 231

Chapter 6 Integrating XML with ADO.NET 233

Understanding Microsoft .NET and XML 233
Using the System.Xml Namespace 234
Using the System.Xml.Schema Namespace 235
Using the System.Xml.Serialization Namespace 236
Using the System.Xml.XPath Namespace 236

Using the System.Xml.Xsl Namespace 236
Using the Document Object Model Interfaces 237
Looking at the XML .NET Architecture 237
Adding a System.Xml Namespace Reference 238
Reading XML 238
Getting Node Information 239
Moving to a Content Node 242
Using the GetAttributes of a Node 243
Searching for a Node 244
Closing the Document 245
Understanding the XmlWriter Classes 246
Setting XmlWriter Properties 247
Writing XML Items 247
Seeing XmlWriter in Action 248
Using the Close Method 250
Using the XmlConvert Class 251
Understanding the DOM Implementation 251
Using the XmlNode Class 252
Using the XmlDocument Class 252
Saving a Document 253
Using the XmlDocumentFragment Class 253
Using the XmlElement Class 254
Adding Attributes to a Node 259
Understanding Transformation and XSLT 260
Using the Transform Method 261
Looking at an Example 261
Using ADO.NET and XML Together 262
Reading XML Using a DataSet 262
Writing XML Using a DataSet 264
Using XmlDataDocument and XML 267
Displaying XML Data in a DataSet Format 270
Saving Data from a DataSet to XML 271
XmlDataDocument: Looking under the Hood 272
Navigating in XML 272
Using the XPathNavigator Class 273
Using XPathNavigator Move Methods 274
Searching Using XPathNavigator 276
Working with Schemas 277
Generating a New Schema 277
Adding Schema from a Database Objects 283
Generating a Typed DataSet from a Schema 285
Summary 286

Chapter 7 Data Binding and Windows Forms Data-Bound Controls 287

Understanding Data Binding 287
- Using the Binding Class 288
- Understanding the BindingManagerBase Functionality 293
- Understanding BindingContext 296
- Building a Record Navigation System 296

Working with Complex Data-Bound Controls 301
- The Role of Control Class in Data Binding 301
- Using the ListControl Class 301
- ListControl DataBinding-Related Events 302
- Data Binding in ComboBox and ListBox Controls 304
- Data Binding in a DataGrid Control 306
- Deleting Data Binding 307

The DataGrid: Super Data-Bound Control 307
- Understanding the DataGrid Class Members 309
- Exploring the DataGrid Helper Objects 312
- Understanding the DataGrid and DataGrid Column Styles 313
- Seeing DataGridTableStyle and DataGridColumnStyle in Action 321
- Seeing HitTest in Action 324
- Implementing Custom Sorting in a DataGrid 334
- Building a DataGrid Record Navigation System 335
- Implementing Search in a DataGrid 338
- Inserting, Updating, and Deleting Data through DataGrids 342

Summary 344

Chapter 8 Constraints and Data Relations 345

Understanding Constraints 345
- Implementing the Constraint Classes 346
- Implementing the ForeignKeyConstraint Class 346

Understanding Data Relations 353

Understanding the DataRelation and DataRelationCollection Objects 354

Summary 358

Chapter 9 ADO.NET Exception Handling 359

Why Use Exception Handling? 360
- Using Try...Catch Statements 361
- Using Try...Catch...Finally Statements 362

Nesting Try...Catch Statements 363
Using Try with Multiple Catch Statements 363
Defining Custom Filters and Error Messages 364
Understanding the Exception Classes 365
Using the Exception Class: Mother of All Exceptions 365
Understanding Other Exception Classes 366
Exception Handling in ADO.NET 366
Recognizing SQL Server 2000 Errors 368
Using SQL Server Error Logs 370
Using the SqlException Class 371
Using the SqlError and SqlErrorCollection Classes 373
Summary 374

Chapter 10 Working with the ODBC .NET Data Provider 375

Using the ODBC .NET Data Provider 375
Installing the ODBC .NET Data Provider 376
Understanding the ODBC .NET Data Provider 377
Accessing Access Databases 378
Accessing MySQL Databases 380
Accessing MySQL Databases 381
Accessing Text File Databases 382
Exporting an Access Table to a Text File 383
Accessing a Text File 385
Accessing Excel Databases 389
Implementing Two .NET 1.1 Updates 391
Summary 391

Chapter 11 Stored Procedures and Views 393

Working with Stored Procedures 393
Creating a Stored Procedure 393
Executing a Stored Procedure from VS .NET 397
Executing a Stored Procedure Programmatically 399
Understanding SQL Injection 405
Working with Views 406
Creating a View 406
Executing a View from VS .NET 409
Retrieving Data from a View Programmatically 409
Filling a DataSet from Multiple Views 411
Summary 411

Chapter 12 Oracle, SQLXML, and Other .NET Data Providers 413

Using Oracle .NET Data Providers 413
Adding a Reference to the Oracle .NET Data Provider 415
Using the Oracle .NET Data Provider Classes 416
Using the SQLXML and SQL XML .NET Data Providers 426
Using the FOR XML Keyword 427
Using the SqlXmlAdapter Object 428
Using the SqlXmlParameter Object 429
Using the SqlXmlCommand Object 430
Using a MySQL Database and the .NET Data Provider 435
Summary 435

Chapter 13 Developing a Custom Data Provider 437

Overview of the Data Provider Interfaces 438
Understanding the Connection Object 439
Understanding the Command Object 440
Understanding the Reader Object 441
Understanding the Adapter Object 443
Building a Custom Data Provider 446
Creating the PipedDataConnection Object 446
Creating the PipedDataCommand Object 449
Creating the PipedDataReader Object 453
Creating the PipedDataAdapter Object 460
Testing the PipedDataProvider Application 462
Debugging Your Custom Data Provider 464
Summary 464

Chapter 14 Developing Database Web Applications Using ASP.NET 465

Introducing ASP.NET 465
ASP.NET Platform Requirements 466
ASP.NET Language Support 466
Installing ASP.NET 466
ASP.NET Editors 466
ASP.NET: An Evolution of ASP 467
Web Forms and Web Services 468

Developing Your First ASP.NET Web Application *468*
Creating a Web Application Project *469*
Adding Web Controls to a Web Form *472*
Setting Control Properties *474*
Using Document Outline *475*
Writing Code on the Button Click Event Handler *477*
Creating Your First ADO.NET Web Application *478*
Using ASP.NET Server-Side Controls *480*
HTML Server Controls *481*
Validation Controls *482*
User Controls *483*
Server Controls and the .NET Framework Library *483*
Why Are Web Forms Controls Called Server-Side Controls? *485*
Adding Server-Side Controls to a Web Form *485*
Understanding Data Binding in ASP.NET *487*
Data-Bound Controls *488*
DataGrid and DataList Controls *490*
Paging in the DataGrid Control *499*
Enabling Paging Programmatically *500*
Adding, Editing, and Deleting Data in Web Forms *502*
Adding Data *505*
Updating Data *506*
Deleting Data *507*
Creating a Guest Book in ASP.NET *507*
Default Web Form: MyGuestBook.aspx *508*
Adding Forms to the Guest Book *511*
Compiling and Running the Guest Book Project *514*
Summary *516*

Chapter 15 Using ADO.NET in XML Web Services *517*

Exploring Web Services and the .NET Framework Library *518*
Creating a Web Service in VS .NET *518*
Testing Your Web Service *521*
Creating the Web Service Consumer *524*
Adding Data to a Database Through a Web Service *529*
Adding More Functionality to the Web Service *534*
Summary *535*

Chapter 16 ASP.NET Server Controls and Data Binding 537

Data Binding in Web Forms, Revisited 537
- Read-Only Data Binding 537
- Simple and Complex Data Binding 538
- The Roles of the Control and Page Classes in Data Binding 539

Data Binding in Simple Web Forms Controls 540
- Using the Button Control 540
- Using the Calendar Control 542
- Understanding Web Server Control Templates 546
- Using the Repeater Control 552
- Understanding the Role of the ListControl Class 555
- Using the ListBox Control 556
- Using the DropDownList Control 558
- Data Binding in Other Simple Controls 560

Data Binding in Complex Web Forms Controls 562
- Understanding the BaseDataList Class 562
- Using the DataKeyCollection Class 563
- Using the DataList Web Server Control 564
- Using the DataGrid Web Server Control 582

Summary 608

Chapter 17 Building Real-World Web Applications 609

Introducing the Job Board Application Specifications 609
Understanding the Database Schema 610
Developing the Online Job Board Application 611
- Creating the Login.aspx Page 612
- Creating the Register.aspx Page 615
- Creating the Contact.aspx Page 617
- Creating the PostJob.aspx Page 618
- Creating the PostResume.aspx Page 620
- Creating the DisplayData.aspx and Resumes.aspx Pages 623
- Creating the dnjHeader.aspx Page 632
- Running the Application 633

Improving and Modifying the Application 635
Summary 636

Chapter 18 Object-Relational Mapping in .NET 637

Why Not Just Use a DataSet? 638
Understanding Object Databases 639
Why Object Relational Mapping? 640
Creating the Basic Design of the Video Store Application 640
Understanding the Basic Architecture 641
Creating the Database Design of the Video Store 641
Creating the Data Object 643
Creating the Mapped Object 644
Creating the Data Access Component 648
Building the VideoTape Test Case 652
Using the User Component 654
Creating the User Test Case 659
Managing Dependencies 661
Creating the Check In/Check Out Component 663
Seeing How It Works 664
Making Design Tradeoffs 665
Understanding Logic in Stored Procedures 665
Understanding Component Isolation 666
Creating a Workaround on Part of the Problem 667
Creating the VideoCheckInCheckOut Test Case 670
Summary 673

Chapter 19 Mapped Objects: Performance Considerations and Data Binding 675

Using Data Binding and Mapped Objects 675
Directly Accessing a Bound Object's Properties 678
Using Logic with Bound Objects 680
Understanding Problematic Master-Detail Relationships 684
Working with Highly Nested Structures 685
Working with a Much Larger Tree 691
A Final Note on Tree Optimization 693
Working with Large Master-Detail Relationships 694
Implementing Lazy Loading 695
Implementing an Incremental Lazy Loading Scheme 700
Loading the Detail When the Master Is Loaded 705
Using a Near-Zero-Impact Caching Mechanism 706
Summary 708

Chapter 20 COM Interoperability and ADO.NET 709

Exploring the .NET Interop Tools 710
Using Visual Studio .NET 710
Using the Type Library Importer and Exporter (Tlbimp.exe) 711
Using the Type Library Exporter (Tlbexp.exe) 712
Using the ADO Recordset in ADO.NET 712
Using ADOX with ADO.NET 716
Accessing OLAP Server Data with ADO.NET 718
Summary 724

Chapter 21 Messaging 725

Introducing Types of Queues 725
Using User Queues 726
Using System Queues 726
Installing Message Queuing 726
Using the System.Messaging Namespace 727
Working with Message Queues 729
Using the MessageQueue Properties 729
Managing Queues Using VS .NET 731
Retrieving Available Queues 732
Filtering Queues Using MessageQueueCriteria 734
Creating and Deleting Message Queues Programmatically 735
Creating a Sample Application 736
Creating a MessageQueue Instance 738
Setting a Queue's Path 739
Sending and Receiving Messages 740
Walking Through Simple Messaging Application 741
Working with Messages 745
Creating and Removing Messages 745
Setting Queue and Message Priorities 746
Understanding Transactional Messaging 747
Using the MessageQueueTransaction Class 747
Creating Transactional Queues 748
Sending and Receiving Transactional Messages 748
Encrypting Messages 750
Summary 752

Chapter 22 SQL Server and ADO.NET: Notes on Performance 753

Improving SQL Server Performance 753
Using Indexes 753
Choosing Which Columns to Index 757
Understanding the SQL Server Profiler 758
Optimizing Automatically with the SQL Server Profiler 760
Optimizing Your Transact-SQL Queries for Performance 762
Avoiding Excessive Stored Procedure Recompilation 765
Avoiding Locks 766
Designing Your Tables for Optimal Performance 766
Checking the Size of Database Pages 767
Understanding Denormalization 768
Understanding the Dangers of Database Design Slippage 768
Understanding ADO.NET Performance Issues and Using Best Practices 769
Selecting Data Providers 769
Writing a Generic Data Access Component 770
Choosing a Development Mode: Designer vs. Manual 775
Retrieving Data: DataReader, XmlReader, and DataSet 775
Updating a Data Source: Command vs. DataSet 776
Saving Data and Using GetChanges 777
Retrieving Data with the SELECT Statement 777
Using Stored Procedures 777
Using Connection Strings and Pooling 777
Summary 778

Appendix A Relational Databases: Some Basic Concepts 779

Understanding Normalization 780
First Normal Form (1NF) 780
Second Normal Form (2NF) 782
Third Normal Form (3NF) 784
Boyce-Codd Normal Form (BCNF) 785
Fourth Normal Form (4NF) 785
Fifth Normal Form (5NF or PJ/NF) 786
Introducing Sets, Cursors, and ADO.NET 786

Using Locking *788*
Isolation Levels *788*
Locking Modes *790*
Summary *792*

Appendix B Commonly Used SQL Statements *793*

Understanding SQL References *793*
Using the SELECT Statement *796*
Using the UPDATE Statement *802*
Using the DELETE Statement *802*
Using the CREATE TABLE Statement *803*
Using the DROP TABLE Statement *803*
Using the TRUNCATE TABLE Statement *804*
Using the INSERT Statement *805*
Using Joins and Aliases *806*
Understanding Views *807*
Using SQL Server's SELECT...FOR XML Clause *809*
Summary *810*

Appendix C ADO.NET Frequently Asked Questions *811*

Summary *845*

Index *847*
