Chapter 1 The Neurointeractive Paradigm: Dynamical Mechanics
and the Emergence of Higher Cortical Function 1

1.1	Abstract	1
1.2	Introduction.....	2
1.3	Principles of Cortical Neurointeractivity	4
1.4	Dynamical Mechanics.....	9
1.5	The Neurointeractive Cycle	13
1.6	Developmental Emergence.....	18
1.7	Explaining Emergence	21
1.8	References.....	22

Chapter 2 The Cortical Pyramidal Cell as a Set of Interacting
Error Backpropagating Dendrites: Mechanism for
Discovering Nature’s Order 25

2.1	Abstract	25
2.2	Introduction.....	26
2.2.1	Defining the Problem	27
2.2.2	How Does the Brain Discover Orderly Relations?	28
2.3	Implementation of the Proposal	31
2.3.1	How Might Error Backpropagation Learning Be Implemented in Dendrites?	31
2.3.2	How Can Dendrites Be Set Up to Teach Each Other?	36
2.3.3	How to Divide Connections Among the Dendrites?	42

2.4	Cortical Minicolumnar Organization and SINBAD Neurons	52
2.5	Associationism	56
2.5.1	SINBAD as an Associationist Theory	56
2.5.2	Countering Nativist Arguments	57
2.6	Acknowledgements	60
	References	60

Chapter 3 Performance of Intelligent Systems Governed by Internally Generated Goals 65

3.1	Abstract	65
3.2	Introduction	65
3.3	Perception as an Active Process	67
3.4	Nonlinear Dynamics of the Olfactory System	71
3.5	Chaotic Oscillations During Learning Novel Stimuli	74
3.6	Generalization and Consolidation of New Perceptions with Context	76
3.7	The Central Role of the Limbic System	78
3.8	Conclusions	81
3.9	Acknowledgements	82
	References	82

Chapter 4 A Theory of Thalamocortex 85

4.1	Abstract	85
4.2	Active Neurons	85
4.3	Neuronal Connections within Thalamocortex	86
4.4	Cortical Regions	87
4.5	Feature Attractor Associative Memory Neural Network	87
4.6	Antecedent Support Associative Memory Neural Network	94
4.7	Hierarchical Abstractor Associative Memory Neural Network	99
4.8	Consensus Building	104
4.9	Brain Command Loop	107
4.10	Testing this Theory	110
4.11	Acknowledgements	111
	Appendix A: Sketch of an Analysis of the Simplified Feature Attractor Associative Memory Neural Network	112
	Appendix B: Experiments with a Simplified Antecedent Support Associative Memory Neural Network	115
	Appendix C: An Experiment with Consensus Building	118
	References	120

Chapter 5 Elementary Principles of Nonlinear Synaptic Transmission 125

5.1	Abstract	125
5.2	Introduction	125

5.3	Frequency-dependent Synaptic Transmission	128
5.4	Nonlinear Synapses Enable Temporal Integration	130
5.5	Temporal Information	132
5.6	Packaging Temporal Information	134
5.7	Size of Temporal Information Packages	135
5.8	Classes of Temporal Information Packages	137
5.9	Emergence of the Population Signal	141
5.10	Recurrent Neural Networks	143
5.11	Combining Temporal Information in Recurrent Networks	144
5.12	Organization of Synaptic Parameters	146
5.13	Learning Dynamics, Learning to Predict	147
5.14	Redistribution of Synaptic Efficacy	148
5.15	Optimizing Synaptic Prediction	150
5.16	A Nested Learning Algorithm	152
5.17	Retrieving Memories from Nonlinear Synapses	153
5.18	Conclusion	154
5.19	Acknowledgements	155
Appendix A: Sherrington’s Leap		156
Appendix B: Functional Significance		156
Appendix C: Visual Patch Recordings		158
Appendix D: Biophysical Basis of Parameters		158
Appendix E: Single Connection, Many Synapses		159
Appendix F: The Model		159
Appendix G: Synaptic Classes		161
Appendix H: Paired Pulses		161
Appendix I: Digitization of Synaptic Parameters		162
Appendix J: Steady State		162
Appendix K: Inhibitory Synapses		163
Appendix L: Lack of Boundaries		163
Appendix M: Speed of RI Accumulation		164
Appendix N: Network Efficiency		164
Appendix O: The Binding Problem of the Binding Problem		164
References		165

Chapter 6 The Development of Cortical Models to Enable Neural-based Cognitive Architectures 171

6.1	Introduction	171
6.1.1	Computational Neuroscience Paradigms and Predictions	172
6.2	The Challenge of Cognitive Architectures	173
6.2.1	General Cognitive Skills	173
6.2.2	A Survey of Current Cognitive Architectures	175
6.2.3	Assumptions and Limitations of Current Cognitive Architectures	183
6.3	The Prospects for a Neural-based Cognitive Architecture	184
6.3.1	Limitations of Artificial Neural Networks	184
6.3.2	Biological Networks Emerging from Computational Neuroscience: Sensory and Motor Modules	184

- 6.3.3 Forebrain Systems Supporting Cortical Function 184
- 6.4 Elements of a General Cortical Model 186
 - 6.4.1 Single Neuron Models or Processor Elements 186
 - 6.4.2 Microcircuitry 186
 - 6.4.3 Dynamic Synaptic Connectivity 187
 - 6.4.4 Ensemble Dynamics and Coding 188
 - 6.4.5 Transient Coherent Structures and Cognitive Dynamics . 189
- 6.5 Promising Models and their Capabilities 189
 - 6.5.1 Biologically Based Cortical Systems 189
 - 6.5.2 A Cortical System Based on Neurobiology, Biological Principles and Mathematical Analysis: Cortronics 192
 - 6.5.3 Connectionist Architectures with Biological Principles: The Convergence of Cognitive Science and Computational Neuroscience 193
- 6.6 The Challenges of Demonstrating Cognitive Ability . . . 195
 - 6.6.1 Robotics and Autonomous Systems 196
- 6.7 Co-development Strategies for Automated Systems and Human Performers 196
- 6.8 Acknowledgements 197
- References 197

Chapter 7 The Behaving Human Neocortex as a Dynamic Network of Networks 205

- 7.1 Abstract 205
- 7.2 Neural Organization Across Scales 206
- 7.3 Network of Networks (NoN) Model 209
 - 7.3.1 Architecture 209
 - 7.3.2 Model Formulation 211
 - 7.3.3 NoN Properties 212
 - 7.3.4 NoN Contributions 214
- 7.4 Neurobiological Predicatability and Falsifiability 214
- 7.5 Implications for Neuroengineering 215
- 7.6 Concluding Remarks 216
- 7.7 Acknowledgements 217
- References 217

Chapter 8 Towards Global Principles of Brain Processing . . . 221

- 8.1 Abstract 221
- 8.2 Introduction 221
- 8.3 What Could Brain Principles Look Like? 222
- 8.4 Structural Modeling 224
- 8.5 Static Activation Study Results 226
- 8.6 The Motion After-Effect (MAE) 227
- 8.7 The Three-Stage Model of Consciousness 229
- 8.8 The CODAM Model of Consciousness 233

8.9	Principles of the Global Brain	235
8.10	The Thinking Brain	237
8.11	Discussion	239
8.12	Acknowledgement	240
	References	240
 Chapter 9 The Neural Networks for Language in the Brain: Creating LAD		245
9.1	Abstract	245
9.2	Introduction	245
9.3	The ACTION Net Model of TSSG	249
9.4	Phrase Structure Analyzers	252
9.5	Generativity of the Adjectival Phrase Analyzer	256
9.6	Complexity of Phrase Structure Analysis	259
9.7	Future Directions in the Construction of LAD	259
9.8	Conclusions	261
	References	262
 Chapter 10 Cortical Belief Networks		267
10.1	Abstract	267
10.1	Introduction	267
10.1	An Example	268
10.1	Representing Distributions in Populations	270
10.1	Basis Function Representations	271
10.1	Generative Representations	272
10.1	Standard Bayesian Approach	272
10.1	Distributional Population Coding	273
10.1	Applying Distributional Population Coding	274
10.1.1	Population Analysis	274
10.1.1	Decoding Transparent Motion	274
10.1.1	Decision Noise	277
10.1.1	Lateral Interactions	280
10.1	Cortical Belief Network	282
10.1	Discussion	284
10.1	Acknowledgements	285
10.1	References	285
