
Contents

Preface	v
Contributors	xix
1 X-ray Crystallography of Hemoglobins Martin K. Safo and Donald J. Abraham	1
2 Analysis of Hemoglobins and Globin Chains by High-Performance Liquid Chromatography Henri Wajcman	21
3 Purification and Molecular Analysis of Hemoglobin by High-Performance Liquid Chromatography Belur N. Manjula and Seetharama A. Acharya	31
4 Oxygen Equilibrium Measurements of Human Red Blood Cells Jean Kister and Henri Wajcman	49
5 Measurement of Rate Constants for Reactions of O ₂ , CO, and NO with Hemoglobin John S. Olson, Erin W. Foley, David H. Maillett, and Eden V. Paster	65
6 Electrophoretic Methods for Study of Hemoglobins Henri Wajcman	93
7 DNA Diagnosis of Hemoglobin Mutations John M. Old	101
8 Methods for Analysis of Prenatal Diagnosis John M. Old	117
9 Hemoglobin Fluorescence Rhoda Elison Hirsch	133
10 Nucleation and Crystal Growth of Hemoglobins: <i>The Case of HbC</i> Peter G. Vekilov, Angela Feeling-Taylor, and Rhoda Elison Hirsch	155
11 Semisynthesis of Hemoglobin Seetharama A. Acharya and Sonati Srinivasulu	177
12 β -Globin-like Gene Cluster Haplotypes in Hemoglobinopathies Shanmugakonar Muralitharan, Rajagopal Krishnamoorthy, and Ronald L. Nagel	195

13	Transgenic Mice and Hemoglobinopathies Mary E. Fabry, Eric E. Bouhassira, Sandra M. Suzuka, and Ronald L. Nagel	213
14	Recombinant Single Globin-Chain Expression and Purification Kazuhiko Adachi	243
15	Nuclear Magnetic Resonance of Hemoglobins Jonathan A. Lukin and Chien Ho	251
16	Solubility Measurement of the Sick Polymer Mary E. Fabry, Seetharama A. Acharya, Sandra M. Suzuka, and Ronald L. Nagel	271
	Index	289
