

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Dynamics Versus Equilibrium Analysis	1
1.2	Linear Versus Nonlinear Modelling	2
1.3	Modelling Nonlinearity	4
1.4	Some Philosophy of Modelling	4
1.5	Perturbation Analysis	6
1.6	Numerical Experiment	7
1.7	Structural Stability	8
1.8	The Critical Line Method	8
1.9	Chaos and Fractals	9
1.10	Layout of the Book and Reading Strategies	10
<b>2</b>	<b>Differential Equations: Ordinary</b>	<b>13</b>
2.1	The Phase Portrait	13
2.2	Linear Systems	20
2.3	Structural Stability	28
2.4	Limit Cycles	32
2.5	The Hopf Bifurcation	37
2.6	The Saddle-Node Bifurcation	39
2.7	Perturbation Methods: Poincaré-Lindstedt	41
2.8	Perturbation Methods: Two-Timing	47
2.9	Stability: Lyapunov's Direct Method versus Linearization	53
2.10	Forced Oscillators, Transients and Resonance	56
2.11	Forced Oscillators: van der Pol	60
2.12	Forced Oscillators: Duffing	69
2.13	Chaos	76
2.14	Poincaré Sections and Return Maps	79
2.15	A Short History of Chaos	90

<b>3</b>	<b>Differential Equations: Partial</b>	<b>95</b>
3.1	Vibrations and Waves	95
3.2	Time and Space	96
3.3	Travelling Waves in 1D: d'Alembert's Solution	97
3.4	Initial Conditions	99
3.5	Boundary Conditions	101
3.6	Standing Waves: Variable Separation	103
3.7	The General Solution and Fourier's Theorem	106
3.8	Friction in the Wave Equation	109
3.9	Nonlinear Waves	111
3.10	Vector Fields in 2D: Gradient and Divergence	114
3.11	Line Integrals and Gauss's Integral Theorem	118
3.12	Wave Equation in Two Dimensions: Eigenfunctions	124
3.13	The Square	127
3.14	The Circular Disk	132
3.15	The Sphere	136
3.16	Nonlinearity Revisited	141
3.17	Tessellations and the Euler-Poincaré Index	143
3.18	Nonlinear Waves on the Square	145
3.19	Perturbation Methods for Nonlinear Waves	150
<b>4</b>	<b>Iterated Maps or Difference Equations</b>	<b>161</b>
4.1	Introduction	161
4.2	The Logistic Map	162
4.3	The Lyapunov Exponent	171
4.4	Symbolic Dynamics	174
4.5	Sharkovsky's Theorem and the Schwarzian Derivative	178
4.6	The Hénon Model	180
4.7	Lyapunov Exponents in 2D	184
4.8	Fractals and Fractal Dimension	187
4.9	The Mandelbrot Set	192
4.10	Can Chaos be Seen?	196
4.11	The Method of Critical Lines	199
4.12	Bifurcations and Periodicity	209
<b>5</b>	<b>Bifurcation and Catastrophe</b>	<b>217</b>
5.1	History of Catastrophe Theory	218
5.2	Morse Functions and Universal Unfoldings in 1 D	219
5.3	Morse Functions and Universal Unfoldings in 2 D	223
5.4	The Elementary Catastrophes: Fold	228

5.5	The Elementary Catastrophes: Cusp	229
5.6	The Elementary Catastrophes: Swallowtail and Butterfly	232
5.7	The Elementary Catastrophes: Umblics	235
<b>6</b>	<b>Monopoly</b>	<b>239</b>
6.1	Introduction	239
6.2	The Model	241
6.3	Adaptive Search	244
6.4	Numerical Results	246
6.5	Fixed Points and Cycles	248
6.6	Chaos	252
6.7	The Method of Critical Lines	254
6.8	Discussion	259
<b>7</b>	<b>Duopoly and Oligopoly</b>	<b>261</b>
7.1	Introduction	261
7.2	The Cournot Model	262
7.3	Stackelberg Equilibria	265
7.4	The Iterative Process	266
7.5	Stability of the Cournot Point	269
7.6	Periodic Points and Chaos	271
7.7	Adaptive Expectations	275
7.8	The Neimark Bifurcation	276
7.9	Critical Lines and Absorbing Area	283
7.10	Adjustments Including Stackelberg Points	285
7.11	Oligopoly with Three Firms	287
7.12	Stackelberg Action Reconsidered	295
7.13	Back to "Duopoly"	296
7.14	True Triopoly	303
<b>8</b>	<b>Business Cycles: Continuous Time</b>	<b>307</b>
8.1	The Multiplier-Accelerator Model	307
8.2	The Original Model	308
8.3	Nonlinear Investment Functions and Limit Cycles	309
8.4	Limit Cycles: Existence	312
8.5	Limit Cycles: Asymptotic Approximation	315
8.6	Limit Cycles: Transients and Stability	320
8.7	The Two-Region Model	325
8.8	The Persistence of Cycles	326
8.9	Perturbation Analysis of the Coupled Model	328

8.10	The Unstable Zero Equilibrium	331
8.11	Other Fixed Points	333
8.12	Properties of Fixed Points	337
8.13	The Arbitrary Phase Angle	338
8.14	Stability of the Coupled Oscillators	340
8.15	The Forced Oscillator	342
8.16	The World Market	342
8.17	The Small Open Economy	344
8.18	Stability of the Forced Oscillator	344
8.19	Catastrophe	346
8.20	Period Doubling and Chaos	347
8.21	Relaxation Cycles	351
8.22	Relaxation: The Autonomous Case	354
8.23	Relaxation: The Forced Case	355
<b>9</b>	<b>Business Cycles: Continuous Space</b>	<b>357</b>
9.1	Introduction	357
9.2	Interregional Trade	358
9.3	The Linear Model	360
9.4	Coordinate Separation	362
9.5	The Square Region	364
9.6	The Circular Region	366
9.7	The Spherical Region	367
9.8	The Nonlinear Spatial Model	370
9.9	Dispersive Waves	372
9.10	Standing Waves	374
9.11	Perturbation Analysis	376
<b>10</b>	<b>Business Cycles: Discrete Time</b>	<b>381</b>
10.1	Introduction	381
10.2	Investments	382
10.3	Consumption	384
10.4	The Cubic Iterative Map	385
10.5	Fixed Points, Cycles, and Chaos	386
10.6	Formal Analysis of Chaotic Dynamics	393
10.7	Coordinate Transformation	393
10.8	The Three Requisites of Chaos	394
10.9	Symbolic Dynamics	395

10.10	Brownian Random Walk	396
10.11	Digression on Order and Disorder	400
10.12	The General Model	401
10.13	Relaxation Cycles	402
10.14	Lyapunov Exponents and Fractal Dimensions	405
10.15	Numerical Studies of the General Case	408
10.16	The Neimark Bifurcation	411
10.17	Critical Lines and Absorbing Areas	418
10.18	Two Regions: The Model	426
10.19	Two Regions: Fixed Points	429
10.20	Two Regions: Invariant Spaces	430
10.21	Processes in Three Dimensions	437
<b>11</b>	<b>Dynamics of Interregional Trade</b>	<b>443</b>
11.1	Interregional Trade Models	443
11.2	The Basic Model	444
11.3	Structural Stability	449
11.4	The Square Flow Grid	451
11.5	Triangular/Hexagonal Grids	454
11.6	Changes of Structure	457
11.7	Dynamisation of Beckmann's Model	463
11.8	Stability	464
11.9	Uniqueness	467
<b>12</b>	<b>Development: Increasing Complexity</b>	<b>471</b>
12.1	The Development Tree	473
12.2	Continuous Evolution	475
12.3	Diversification	476
12.4	Lancaster's Property Space	478
12.5	Branching Points	478
12.6	Bifurcations	479
12.7	Consumers	481
12.8	Producers	484
12.9	Catastrophe	486
12.10	Simple Branching in 1 D	487
12.11	Branching and Emergence of New Implements in 1 D	489
12.12	Catastrophe Cascade in 1 D	492
12.13	Catastrophe Cascade in 2 D	494
12.14	Fast and Slow Processes	497
12.15	Alternative Futures	499

**XII    Contents**

<b>13</b>	<b>Development: Multiple Attractors</b>	<b>503</b>
13.1	Population Dynamics	504
13.2	Diffusion	509
13.3	Stability	514
13.4	The Dynamics of Capital and Labour	519
	<b>References</b>	<b>529</b>
	<b>List of Figures</b>	<b>535</b>
	<b>Index</b>	<b>543</b>

Attractors, Bifurcations, & Chaos  
Nonlinear Phenomena in Economics  
Puu, T.  
2003, XII, 549 p. 191 illus., Hardcover  
ISBN: 978-3-540-40226-8
