| <b>Bayes' Theorem - the Rough Set Perspective .....</b>                                       | <b>1</b>  |
| <i>Zdzisław Pawlak</i>  |           |
| 1 Introduction.....   | 1         |
| 2 Bayes' Theorem .....  | 2         |
| 3 Information Systems and Approximation of Sets .....   | 2         |
| 4 Decision Language .....   | 4         |
| 5 Decision Algorithms .....   | 5         |
| 6 Decision Rules in Information Systems.....  | 6         |
| 7 Properties of Decision Rules .....  | 7         |
| 8 Decision Tables and Flow Graphs .....   | 8         |
| 9 Illustrative Example .....  | 8         |
| 10 Conclusion .....   | 11        |
| References .....  | 12        |
| <b>Approximation Spaces in Rough Neurocomputing .....</b>                                     | <b>13</b> |
| <i>Andrzej Skowron</i>  |           |
| 1 Introduction.....   | 13        |
| 2 Approximation Spaces in Rough Set Theory .....  | 14        |
| 3 Generalizations of Approximation Spaces .....   | 15        |
| 4 Information Granule Systems and Approximation Spaces.....                                   | 16        |
| 5 Classifiers as Information Granules .....   | 18        |
| 6 Approximation Spaces for Information Granules .....   | 19        |
| 7 Approximation Spaces in Rough-Neuro Computing .....   | 20        |
| 8 Conclusion .....  | 21        |
| References .....  | 22        |
| <b>Soft Computing Pattern Recognition: Principles, Integrations<br/>and Data Mining .....</b> | <b>23</b> |
| <i>Sankar K. Pal</i>  |           |
| 1 Introduction.....   | 23        |
| 2 Relevance of Fuzzy Set Theory in Pattern Recognition .....                                  | 25        |
| 3 Relevance of Neural Network Approaches .....  | 27        |
| 4 Genetic Algorithms for Pattern Recognition .....  | 28        |
| 5 Integration and Hybrid Systems .....  | 29        |
| 6 Evolutionary Rough Fuzzy MLP .....  | 30        |
| 7 Data mining and knowledge discovery .....   | 31        |
| References .....  | 33        |

**Part I. Generalizations and New Theories**

---

|   |    |
|---|----|
| <b>Generalization of Rough Sets Using Weak Fuzzy Similarity Relations</b> ..... | 37 |
| <i>Rolly Intan, Y.Y. Yao, Masao Mukaidono</i>                                   |    |
| 1 Introduction.....   | 37 |
| 2 Weak Fuzzy Similarity Relations .....   | 38 |
| 3 Generalized Rough Set Approximations .....                                    | 41 |
| 4 Generalized Rough Membership Functions .....                                  | 43 |
| 5 An Illustrative Example .....   | 44 |
| 6 Conclusions .....   | 46 |
| References .....  | 46 |
| <b>Two Directions toward Generalization of Rough Sets</b> .....                 | 47 |
| <i>Masahiro Inuiguchi and Tetsuzo Tanino</i>                                    |    |
| 1 Introduction.....   | 47 |
| 2 The Original Rough Sets.....  | 48 |
| 3 Distinction among Positive, Negative and Boundary Elements .....              | 50 |
| 4 Approximations by Means of Elementary Sets .....                              | 54 |
| 5 Concluding Remarks .....  | 56 |
| References .....  | 56 |
| <b>Two Generalizations of Multisets</b> .....                                   | 59 |
| <i>Sadaaki Miyamoto</i>   |    |
| 1 Introduction.....   | 59 |
| 2 Preliminaries .....   | 60 |
| 3 Infinite Memberships .....  | 62 |
| 4 Generalization of Membership Sequence.....                                    | 64 |
| 5 Conclusion .....  | 67 |
| References .....  | 67 |
| <b>Interval Probability and Its Properties</b> .....                            | 69 |
| <i>Hideo Tanaka, Kazutomi Sugihara, Yutaka Maeda</i>                            |    |
| 1 Introduction.....   | 69 |
| 2 Interval Probability Functions .....  | 70 |
| 3 Combination and Conditional Rules for IPF .....                               | 74 |
| 4 Numerical Example of Bayes' Formula .....                                     | 75 |
| 5 Concluding Remarks .....  | 77 |
| References .....  | 77 |
| <b>On Fractal Dimension in Information Systems</b> .....                        | 79 |
| <i>Lech Polkowski</i>   |    |
| 1 Introduction.....   | 79 |
| 2 Fractal Dimensions.....   | 80 |

|   |   |    |
|---|---|----|
| 3 | Rough Sets and Topologies on Rough Sets ..... | 81 |
| 4 | Fractals in Information Systems .....         | 84 |
|   | References .....                              | 86 |

## **A Remark on Granular Reasoning and Filtration .....** 89

*Tetsuya Murai, Michinori Nakata, Yoshiharu Sato*

|   |  |    |
|---|--|----|
| 1 | Introduction.....                                | 89 |
| 2 | Kripke Semantics and Filtration .....            | 90 |
| 3 | Relative Filtration with Approximation .....     | 92 |
| 4 | Relative Filtration and Granular Reasoning ..... | 94 |
| 5 | Concluding Remarks .....                         | 96 |
|   | References .....                                 | 96 |

## **Towards Discovery of Relevant Patterns from Parameterized Schemes of Information Granule Construction .....** 97

*Andrzej Skowron, Jarosław Stepaniuk, James F. Peters*

|   |                              |     |
|---|------------------------------|-----|
| 1 | Introduction.....            | 97  |
| 2 | Approximation Granules ..... | 99  |
| 3 | Rough-Fuzzy Granules .....   | 101 |
| 4 | Granule Decomposition .....  | 103 |
|   | References .....             | 106 |

## **Approximate Markov Boundaries and Bayesian Networks: Rough Set Approach .....** 109

*Dominik Ślęzak*

|   |  |     |
|---|--|-----|
| 1 | Introduction.....                      | 109 |
| 2 | Data Based Probabilistic Models .....  | 110 |
| 3 | Approximate Probabilistic Models ..... | 115 |
| 4 | Conclusions .....                      | 120 |
|   | References .....                       | 120 |

---

## **Part II. Data Mining and Rough Sets**

---

### **Mining High Order Decision Rules .....** 125

*Y. Y. Yao*

|   |   |     |
|---|---|-----|
| 1 | Introduction.....                                   | 125 |
| 2 | Motivations .....                                   | 126 |
| 3 | Mining High Order Decision Rules .....              | 128 |
| 4 | Mining Ordering Rules: an Illustrative Example..... | 131 |
| 5 | Conclusion .....                                    | 134 |
|   | References .....                                    | 134 |

### **Association Rules from a Point of View of Conditional Logic .** 137

*Tetsuya Murai, Michinori Nakata, Yoshiharu Sato*

|   |                     |     |
|---|---------------------|-----|
| 1 | Introduction.....   | 137 |
| 2 | Preliminaries ..... | 137 |

|   |  |     |
|---|--|-----|
| 3 | Association Rules and Conditional Logic .....        | 141 |
| 4 | Association Rules and Graded Conditional Logic ..... | 143 |
| 5 | Concluding Remarks .....                             | 145 |
|   | References .....                                     | 145 |

**Association Rules with Additional Semantics**

|  |            |
|--|------------|
| <b>Modeled by Binary Relations .....</b> | <b>147</b> |
|--|------------|

*T. Y. Lin and Eric Louie*

|   |  |     |
|---|--|-----|
| 1 | Introduction.....                        | 147 |
| 2 | Databases with Additional Semantics..... | 148 |
| 3 | Re-formulating Data Mining.....          | 150 |
| 4 | Mining Semantically.....                 | 151 |
| 5 | Semantic Association Rules .....         | 152 |
| 6 | Conclusion .....                         | 153 |
|   | References .....                         | 155 |

**A Knowledge-Oriented Clustering Method Based on Indiscernibility Degree of Objects .....**

|            |
|------------|
| <b>157</b> |
|------------|

*Shoji Hirano, Shusaku Tsumoto*

|   |                            |     |
|---|----------------------------|-----|
| 1 | Introduction.....          | 157 |
| 2 | Clustering Procedure ..... | 158 |
| 3 | Experimental Results.....  | 164 |
| 4 | Conclusions .....          | 166 |
|   | References .....           | 166 |

**Some Effective Procedures for Data Dependencies in Information Systems .....**

|            |
|------------|
| <b>167</b> |
|------------|

*Hiroshi Sakai*

|   |   |     |
|---|---|-----|
| 1 | Preliminary .....   | 167 |
| 2 | Three Procedures for Dependencies.....                      | 168 |
| 3 | An Algorithm for Rule Extraction.....                       | 173 |
| 4 | Dependencies in Non-deterministic Information Systems ..... | 173 |
| 5 | Concluding Remarks .....                                    | 176 |
|   | References .....  | 176 |

**Improving Rules Induced from Data Describing Self-Injurious Behaviors by Changing Truncation Cutoff and Strength .....**

*Jerzy W. Grzymala-Busse and Rachel L. Freeman*

|   |   |     |
|---|---|-----|
| 1 | Introduction.....                       | 177 |
| 2 | Temporal Data .....                     | 178 |
| 3 | Rule Induction and Classification ..... | 181 |
| 4 | Postprocessing of Rules .....           | 182 |

|   |                   |     |
|---|-------------------|-----|
| 5 | Experiments.....  | 182 |
| 6 | Conclusions ..... | 184 |
|   | References .....  | 184 |

### **The Variable Precision Rough Set Inductive Logic Programming Model and Future Test Cases in Web Usage Mining ....**

*V. Uma Maheswari, Arul Siromoney, K. M. Mehata*

|   |   |     |
|---|---|-----|
| 1 | Introduction.....                             | 187 |
| 2 | The VPRS model and future test cases .....    | 188 |
| 3 | The VPRSILP model and future test cases ..... | 189 |
| 4 | A simple-graph-VPRSILP-ESD system .....       | 190 |
| 5 | VPRSILP and Web Usage Graphs .....            | 191 |
| 6 | Experimental details .....                    | 191 |
| 7 | Conclusions .....                             | 195 |
|   | References .....                              | 195 |

### **Rough Set and Genetic Programming .....**

*Yasser Hassan and Eiichi Tazaki*

|   |                                     |     |
|---|-------------------------------------|-----|
| 1 | Introduction.....                   | 197 |
| 2 | Rough Set Theory .....              | 198 |
| 3 | Genetic Rough Induction (GRI) ..... | 199 |
| 4 | Experiments and Results.....        | 202 |
| 5 | Conclusions .....                   | 206 |
|   | References .....                    | 207 |

---

## **Part III. Conflict Analysis and Data Analysis**

---

### **Rough Set Approach to Conflict Analysis.....**

*Rafal Deja*

|   |                                |     |
|---|--------------------------------|-----|
| 1 | Introduction.....              | 211 |
| 2 | Conflict Model .....           | 212 |
| 3 | System with Constraints .....  | 216 |
| 4 | Analysis .....                 | 216 |
| 5 | Agents' Strategy Analysis..... | 218 |
| 6 | Conclusions .....              | 220 |
|   | References .....               | 220 |

### **Criteria for Consensus Susceptibility in Conflicts Resolving ...**

*Ngoc Thanh Nguyen*

|   |                                |     |
|---|--------------------------------|-----|
| 1 | Introduction.....              | 223 |
| 2 | Consensus Choice Problem ..... | 224 |

|   |                                   |     |
|---|-----------------------------------|-----|
| 3 | Susceptibility to Consensus ..... | 226 |
| 4 | Conclusions .....                 | 232 |
|   | References .....                  | 232 |

**$L_1$ -Space Based Models for Clustering and Regression** ..... 233

*Sadaaki Miyamoto, Takatsugu Koga, Yoichi Nakayama*

|   |  |     |
|---|--|-----|
| 1 | Introduction .....                                   | 233 |
| 2 | Fuzzy $c$ -means Based on $L_1$ -space .....         | 234 |
| 3 | Mixture Density Model Based on $L_1$ -space .....    | 236 |
| 4 | Regression Models Based on Absolute Deviations ..... | 237 |
| 5 | Numerical Examples .....                             | 239 |
| 6 | Conclusion .....                                     | 239 |
|   | References .....                                     | 240 |

**Upper and Lower Possibility Distributions with Rough Set Concepts** ..... 243

*Peijun Guo and Hideo Tanaka*

|   |   |     |
|---|---|-----|
| 1 | The Concept of Upper and Lower Possibility Distributions .....                                  | 243 |
| 2 | Comparison of dual possibility distributions with dual approximations in rough set theory ..... | 245 |
| 3 | Identification of Upper and Lower Possibility Distributions .....                               | 245 |
| 4 | Numerical Example .....   | 248 |
| 6 | Conclusions .....   | 250 |
|   | References .....  | 250 |

**Efficiency Values Based on Decision Maker's Interval Pairwise Comparisons** ..... 251

*Tomoe Entani, Hidetomo Ichihashi, Hideo Tanaka*

|   |   |     |
|---|---|-----|
| 1 | Introduction .....  | 251 |
| 2 | Interval AHP with Interval Comparison Matrix .....                | 252 |
| 3 | Choice of the Optimistic Weights and Efficiency Value by DEA .... | 254 |
| 4 | Numerical Example .....   | 257 |
| 5 | Concluding Remarks .....  | 259 |
|   | References .....  | 259 |

---

**Part IV. Applications in Engineering**

---

**Rough Measures, Rough Integrals and Sensor Fusion** ..... 263

*Z. Pawlak, J.F. Peters, A. Skowron, Z. Suraj, S.Ramanna, M.Borkowski*

|   |  |     |
|---|--|-----|
| 1 | Introduction .....                     | 263 |
| 2 | Classical Additive Set Functions ..... | 264 |
| 3 | Basic Concepts of Rough Sets .....     | 264 |

|   |                           |     |
|---|---------------------------|-----|
| 4 | Rough Measures .....      | 265 |
| 5 | Rough Integrals .....     | 265 |
| 6 | Multi-Sensor Fusion ..... | 268 |
| 7 | Conclusion .....          | 270 |
|   | References .....          | 271 |

## **A Design of Architecture for Rough Set Processor .....** 273

*Akinori Kanasugi*

|   |                                      |     |
|---|--------------------------------------|-----|
| 1 | Introduction .....                   | 273 |
| 2 | Outline of Rough Set Processor ..... | 273 |
| 3 | Design of Architecture .....         | 275 |
| 4 | Discussions .....                    | 279 |
| 6 | Conclusion .....                     | 280 |
|   | References .....                     | 280 |

## **Identifying Adaptable Components**

### **- A Rough Sets Style Approach .....** 281

*Yoshiyuki Shinkawa, Masao J. Matsumoto*

|   |  |     |
|---|--|-----|
| 1 | Introduction .....                                 | 281 |
| 2 | Defining Adaptation of Software Components .....   | 281 |
| 3 | Identifying One-to-one Component Adaptation .....  | 282 |
| 4 | Identifying One-to-many Component Adaptation ..... | 288 |
| 5 | Conclusions .....                                  | 289 |
|   | References .....                                   | 290 |

## **Analysis of**

### **Image Sequences for the UAV .....** 291

*Marcin S. Szczuka, Nguyen Hung Son*

|   |                         |     |
|---|-------------------------|-----|
| 1 | Introduction .....      | 291 |
| 2 | Basic Notions .....     | 292 |
| 3 | The WITAS Project ..... | 293 |
| 4 | Data Description .....  | 294 |
| 5 | Tasks .....             | 295 |
| 6 | Results .....           | 296 |
| 7 | Conclusions .....       | 299 |
|   | References .....        | 300 |

<http://www.springer.com/978-3-540-00574-2>

Rough Set Theory and Granular Computing  
Inuiguchi, M.; Tsumoto, S.; Hirano, S. (Eds.)  
2003, XV, 300 p., Hardcover  
ISBN: 978-3-540-00574-2
