

Contents

1	Introduction	1
	References	3
2	Warming up: Oscillators	5
	2.1 Semiclassical Trace Formulae	5
	2.2 Spectral Statistics	14
	References	19
3	Trace Formulae with Spin	21
	3.1 The Pauli Hamiltonian	21
	3.2 Deriving Trace Formulae: General Strategy	23
	3.3 Semiclassical Time Evolution for Pauli Hamiltonians	26
	3.4 Spin Transport and Spin Precession	29
	3.5 Semiclassical Trace Formulae	32
	3.5.1 The Weyl term	34
	3.5.2 Hyperbolic Systems	35
	3.5.3 Integrable Systems	40
	3.6 Examples	43
	3.6.1 Reprise: Oscillators	43
	3.6.2 Spin–Orbit Coupling in 2 Dimensions – σp -Billiards ..	44
	3.6.3 The σp -Torus	45
	3.6.4 Spin–Orbit Coupling in Non-Relativistic Hydrogen ...	50
	3.7 Trace Formula for the Dirac Equation	54
	3.7.1 Reprise: The Dirac Oscillator	57
	3.8 A Different Limit of the Pauli Equation	59
	References	63
4	Classical Dynamics of Spinning Particles – the Skew Product	67
	4.1 The Skew Products Y^t and Y_{cl}^t	67
	4.2 Excursion: Observables for Spinning Particles	71
	4.3 Ergodic Properties of the Skew Product	73
	4.4 Integrable Systems	74
	4.4.1 Hamiltonian Systems – the Theorem of Liouville and Arnold	74

4.4.2	Integrability of the Skew Product	76
4.5	Reprise: Trace Formula for Integrable Systems	82
	References	83
5	Torus Quantisation	85
5.1	Quantum Mechanical Integrability	86
5.2	EBK-Quantisation	88
5.3	Torus Quantisation and Spin Rotation Angles	90
5.4	Examples	94
5.4.1	Homogeneous Magnetic Field	94
5.4.2	The σp -Torus	95
5.4.3	Rotationally Invariant Systems	96
5.4.4	Spin–Orbit Coupling in Non-Relativistic Hydrogen	99
5.5	Spin Rotation Angles in the Dirac Case	102
5.6	The Sommerfeld Formula	103
5.7	Excursion: Remarks on the General Case	107
	References	108
6	Classical Sum Rules	111
6.1	Basic Idea	112
6.2	Some Remarks on the Status of Sum Rules	113
6.3	Hannay-Ozorio de Almeida Sum Rules	115
6.3.1	Chaotic Systems	115
6.3.2	Integrable Systems	117
6.4	Classical Time Evolution Operators for Spinning Particles	119
6.5	Spin in Classical Sum Rules	120
6.5.1	Chaotic Systems	121
6.5.2	Integrable Systems	122
6.5.3	Partially Integrable Systems	124
	References	125
7	Spectral Statistics and Spin	127
7.1	Symmetries and Unfolding	129
7.2	Time Reversal Invariance in the Trace Formula	132
7.3	Spectral Two-Point Form Factor	133
7.3.1	Diagonal Approximation	137
7.3.2	Chaotic Systems	142
7.3.3	Integrable Systems	144
7.3.4	Partially Integrable Systems	145
7.4	Illustration: The σp -Rectangle	148
7.5	Other Statistical Measures	156
7.5.1	The Number Variance	156
7.5.2	The Value Distribution of N_ϵ^{fl}	161
7.5.3	$R_2(s)$ and the Bogomolny-Keating Bootstrap	162
	References	167

Appendices	171
A The Poisson Summation Formula	171
B Solution of the Scalar Transport Equation	172
C Some Facts About the Groups $SU(2)$ and $SO(3)$	173
D The Method of Stationary Phase	177
E Wigner-Weyl Calculus	178
F Remarks on the Numerical Calculation of the Spectral Form Factor	183
References	185
Index	187

Spinning Particles-Semiclassics and Spectral Statistics

Keppeler, S.

2003, X, 192 p., Hardcover

ISBN: 978-3-540-01184-2
