

Table of Contents

Overview of Solar Physics

<i>S.M. Chitre</i>	1
1 Introduction	1
2 Composition and Structure of the Sun	3
2.1 Equations of Stellar Structure	4
2.2 The Standard Solar Model	7
3 Probes of the Sun's Interior	10
3.1 Solar Neutrino Problem	10
3.2 Helioseismology	14
3.3 Rotation Rate in the Solar Interior	18
4 Magnetically Controlled Solar Phenomena	20
References	24

Instrumentation and Observational Techniques in Solar Astronomy

<i>A. Bhatnagar</i>	27
1 Introduction	27
2 How to Observe the Sun?	28
2.1 Observing the Photosphere	29
2.2 Observation of the Chromosphere	32
2.3 Observation of the Corona	32
3 Solar Instrumentation	34
3.1 Solar Telescopes	34
3.2 Coronagraphs	39
3.3 Spectrographs, Spectroheliscopes and Spectroheliographs	39
3.4 Narrow Band Filters	47
3.5 Solar Image Guider	51
4 Solar Observations	52
4.1 Solar Seeing	52
4.2 Sunspot Observations	55
4.3 Development of Sunspots and Sunspot Groups	59
4.4 Classification of Sunspots and Sunspot Groups	60
4.5 Sunspot Number	64
4.6 Position Determination of Solar Features	66
5 Solar Magnetic Fields	72
5.1 Sunspot Magnetic Fields	72

VIII Table of Contents

5.2	General Magnetic Fields	74
5.3	Velocity Field Observation	77
5.4	Leighton's Spectroheliographic Technique for 2-D Velocity and Magnetic Field Maps	77
5.5	Vector Magnetic Fields	77
6	Solar Data from the Internet	78
	References	78

Solar Interior and Seismology

<i>H.M. Antia</i>	80
1 Introduction	80
2 Observations of Solar Oscillations	81
3 Properties of Solar Oscillations	83
4 Seismic Inferences of the Solar Structure	91
4.1 Inversion Techniques	92
4.2 Inversion Results	95
4.3 Inversion for Temperature and Chemical Composition	100
5 Rotation Rate in the Solar Interior	103
5.1 Inversion for Rotation Rate	104
5.2 Inversion Results	108
5.3 The Tachocline	111
5.4 Meridional Flow	113
6 Asphericity in Solar Structure	114
7 Temporal Variations in the Solar Interior	115
7.1 Temporal Variations of the Solar Radius	116
7.2 Temporal Variations of the Rotation Rate	118
8 Summary	120
References	121

The Active and Explosive Sun

A.	<i>Ambastha</i>	127
1	Introduction	127
2	The Signposts of Solar Activity	131
3	Centres of Activity in the Solar Atmosphere – The Sunspots	133
4	Sunspots and Solar Rotation	135
5	The 11 Year Solar Activity Cycle	137
5.1	Mapping Sunspot Positions During Activity Cycles: The Butterfly Diagram	138
5.2	The Changing Face of the Sun over the Solar Cycle	141
5.3	Solar Activity Cycles of Long Periods	141
5.4	Babcock’s Model of the Solar Activity and the Magnetic Cycle ..	143
6	Explosive, Eruptive Phenomena on the Sun	145
6.1	Solar Flares	145
6.2	Flare Classification	151
6.3	The Standard Flare Model and the Main Phases of Flares	152
6.4	Fundamental Questions About Flares	153

6.5	Potential and Force-Free Magnetic Fields	154
6.6	Solar Coronal Plasma Conditions and Magnetic Reconnection ...	158
6.7	A Flare Model as Inferred from Recent Observations	159
6.8	Solar Quakes Produced by Large Flares.....	159
6.9	Eruptive Prominences and Filaments	161
6.10	Coronal Mass Ejections (CMEs) – Large Scale Eruptions of Magnetic Clouds from the Sun	164
References		170

Magnetic Flux Tubes and Activity on the Sun

<i>S.S. Hasan</i>		173
1	Introduction	173
2	Magnetic Fields in the Solar Interior and Flux Emergence	174
2.1	Solar Dynamo	174
2.2	Seat of the Dynamo	175
2.3	Flux Emergence	176
3	Nature of the Surface Magnetic Field	178
3.1	Formation of Intense Flux Tubes in the Photosphere	179
3.2	The Thermal Structure of Intense Flux Tubes	185
4	Dynamical Processes and Heating of the Magnetic Chromosphere....	188
4.1	Longitudinal and Transverse Waves in Flux Tubes	189
4.2	The Linear Model	191
4.3	Chromospheric Heating	192
4.4	Nonlinear Results	193
5	Summary	197
References		198

Solar Magnetic Fields

<i>P. Venkatakrishnan</i>		202
1	Introduction	202
2	Magnetohydrodynamic Approximation in Stellar Plasmas	203
3	Generation of Magnetic Fields	205
3.1	Turbulent Dynamo and Mean Field Magnetohydrodynamics....	206
3.2	Dynamo in the Overshoot Layer	211
3.3	Babcock–Leighton Picture and Hybrid Models	212
3.4	Inputs from Helioseismology	213
4	Force Free Equilibria, Topology, Reconnection and Flares	214
5	Measurement of the Solar Magnetic Field	217
5.1	The Zeeman Effect	217
5.2	The Hanle Effect	219
5.3	The Stokes Parameters	220
5.4	Subsystems for Polarimetry	221
5.5	Conversion of Polarisation Maps into Magnetograms	228
6	Concluding Remarks	229
References		229

The Physics of Chromospheres and Coronae

<i>P. Ulmschneider</i>	232
1 Introduction, What Are Chromospheres and Coronae?	232
2 Heating Mechanisms	234
3 Hydrodynamic Heating Mechanisms	236
4 Magnetic Heating Mechanisms	239
4.1 Mode-Coupling	242
4.2 Resonance Heating	244
4.3 Turbulent Heating	244
4.4 Compressional Viscous Heating	246
4.5 Ion-Cyclotron Resonance Heating	246
4.6 Landau Damping	247
4.7 Resonant Absorption	248
4.8 Phase-Mixing	248
4.9 Reconnection in Current Sheets	249
5 Acoustic Energy Generation	251
6 Theoretical Chromospheres	254
7 Semi-empirical Chromosphere Models	259
8 Extremely Time-Dependent Chromospheres	260
9 Realistic Chromospheres	267
10 Magnetic Chromospheres	272
11 Conclusions	277
References	279

The Solar Corona

<i>B.N. Dwivedi</i>	281
1 Introduction	281
2 History of Coronal Studies	284
3 X-rays and Ultraviolet Emission from the Solar Atmosphere	286
4 Coronal Heating	289
4.1 Coronal Heating by Nanoflares	292
4.2 Coronal Heating by Waves	294
4.3 Fieldwork	295
5 Conclusions	296
References	297

The Solar Wind

<i>P.K. Manoharan</i>	299
1 Introduction	299
2 The Hot Solar Corona	299
2.1 Coronal Magnetic Fields	300
2.2 Coronal Heating	302
3 Coronal Expansion/ Solar Wind	303
4 Interplanetary Magnetic Fields	305
5 Solar Wind Measuring Techniques	306

5.1	Interplanetary Scintillation	306
6	Solar Wind in the Inner Heliosphere	310
6.1	Quasi-stationary Solar Wind	311
6.2	Radial Evolution of the Quasi-stationary Wind	312
6.3	Latitudinal Variations	314
6.4	The Density Turbulence Spectrum	315
7	Solar Wind Transients	318
7.1	Co-rotating Interaction Regions	318
7.2	Coronal Mass Ejections	319
	References	324
	Subject Index	327

Lectures on Solar Physics

Antia, H.M.; Bhatnagar, A.; Ulmschneider, P. (Eds.)

2003, XIII, 338 p., Hardcover

ISBN: 978-3-540-01528-4
