

Preface

This work is based on my habilitation thesis which I prepared at Berlin's Humboldt-University while I was an assistant professor at the computer science department in the years 1994–2000. The material has been re-arranged, some parts have been significantly shortened, while other parts have been expanded.

I am especially grateful to Professor Egmar Rödel at Humboldt-University for giving me the opportunity to work on this subject. Special thanks go to the referees of my habilitation thesis as well as to the anonymous referees of Springer-Verlag for their worthy suggestions that resulted in an improvement of the manuscript. Particular thanks are owed to Professor Douglas Shier (Clemson University) for his valuable comments.

Finally, I would like to thank my wife Imke and my children Sophie, Emily and Justus for their never-ending patience.
