

Table of Contents

Skeleton-Based Seam Computation for Triangulated Surface Parameterization	1
<i>Xu-Ping Zhu, Shi-Min Hu (Tsinghua University), and Ralph Martin (Cardiff University)</i>	
Parameterizing N -Holed Tori	14
<i>Cindy Grimm and John Hughes (Washington University, St. Louis)</i>	
Generic Parameterization of Bifurcating Structures	30
<i>Malcolm I.G. Bloor and Michael J. Wilson (Leeds University)</i>	
Direct Computation of a Control Vertex Position on any Subdivision Level	40
<i>Loïc Barthe and Leif Kobbelt (RWTH-Aachen)</i>	
Optimising Triangulated Polyhedral Surfaces with Self-intersections	48
<i>Lyuba Alboul (Sheffield Hallam University)</i>	
Combinatorial Properties of Subdivision Meshes	73
<i>Ioannis Ivrissimtzis and Hans-Peter Seidel (MPI, Saarbrücken)</i>	
Watermarking 3D Polygonal Meshes Using the Singular Spectrum Analysis	85
<i>Kohei Murotani and Kokichi Sugihara (University of Tokyo)</i>	
Compression of Arbitrary Mesh Data Using Subdivision Surfaces	99
<i>Hiroshi Kawaharada and Kokichi Sugihara (University of Tokyo)</i>	
Triangle Mesh Duality: Reconstruction and Smoothing	111
<i>Giuseppe Patanè and Michela Spagnuolo (Consiglio Nazionale delle Ricerche, Genova)</i>	
Hand Tracking Using a Quadric Surface Model and Bayesian Filtering	129
<i>Roberto Cipolla, Bjorn Stenger, Arasanathan Thayananthan (University of Cambridge), and Philip H.S. Torr (Microsoft, Cam- bridge)</i>	
Vector Transport for Shape-from-Shading	142
<i>Fabio Sartori and Edwin R. Hancock (University of York)</i>	
A Graph-Spectral Method for Surface Height Recovery	163
<i>Antonio Robles-Kelly and Edwin R. Hancock (University of York)</i>	
A Robust Reconstruction Algorithm of Displaced Butterfly Subdivision Surfaces from Unorganized Points	182
<i>Byeong-Seon Jeong, Sun-Jeong Kim, and Chang-Hun Kim (Korea University, Seoul)</i>	

Filling Holes in Point Clouds	196
<i>Pavel Chalmovianský and Bert Jüttler (J. Kepler University, Linz)</i>	
Trimming Local and Global Self-intersections in Offset Curves	
Using Distance Maps	213
<i>Gershon Elber (Technion, Haifa)</i>	
Using Line Congruences for Parameterizing Special Algebraic Surfaces	223
<i>Bert Jüttler and Katharina Rittenschober (J. Kepler University, Linz)</i>	
Boundary Conditions for the 3-Direction Box-Spline	244
<i>Malcolm A. Sabin (Numerical Geometry Ltd) and Aurelian Bejancu (University of Leeds)</i>	
The Plateau-Bézier Problem.....	262
<i>Juan Monterde (Universitat de València)</i>	
A Functional Equation Approach to the Computation of the Parameter Symmetries of Spline Paths	274
<i>Helmut E. Bez (Loughborough University)</i>	
Efficient One-Sided Linearization of Spline Geometry	297
<i>Jörg Peters (University of Florida)</i>	
Procedural Modelling, Generative Geometry, and the International Standard ISO 10303 (STEP)	320
<i>Michael J. Pratt (LMR Systems, UK)</i>	
Variable-Free Representation of Manifolds via Transfinite Blending with a Functional Language	338
<i>Alberto Paoluzzi (Università Roma Tre)</i>	
Modified Affine Arithmetic Is More Accurate than Centered Interval Arithmetic or Affine Arithmetic	355
<i>Huahao Shou, Hongwei Lin (Zhejiang University of Technology), Ralph Martin (Cardiff University), and Guojin Wang (Zhejiang University of Technology)</i>	
On the Spine of a PDE Surface	366
<i>Hassan Ugail (University of Bradford)</i>	
Application of PDE Methods to Visualization of Heart Data.....	377
<i>Ognyan Kounchev (Bulgarian Academy of Sciences) and Michael J. Wilson (University of Leeds)</i>	
Author Index	393

Mathematics of Surfaces

10th IMA International Conference, Leeds, UK,

September 15-17, 2003, Proceedings

Wilson, M.J.; Martin, R.R. (Eds.)

2003, VIII, 400 p., Softcover

ISBN: 978-3-540-20053-6
