

# Table of Contents

## Comparative Genomics

A Local Chaining Algorithm and Its Applications in Comparative Genomics .....	1
<i>M.I. Abouelhoda (University of Bielefeld) and E. Ohlebusch (University of Ulm)</i>	
Common Intervals of Two Sequences .....	17
<i>G. Didier (Laboratoire Genome et Informatique - CNRS UMR 8116)</i>	

## Database Searching

A Systematic Statistical Analysis of Ion Trap Tandem Mass Spectra in View of Peptide Scoring .....	25
<i>J. Colinge, A. Masselot, and J. Magnin (GeneProt Inc.)</i>	
Vector Seeds: An Extension to Spaced Seeds Allows Substantial Improvements in Sensitivity and Specificity.....	39
<i>B. Brejová, D.G. Brown, and T. Vinař (University of Waterloo)</i>	

## Gene Finding and Expression

A Stochastic Approach to Count RNA Molecules Using DNA Sequencing Methods.....	55
<i>B. Hollas and R. Schuler (Universität Ulm)</i>	
A Method to Detect Gene Structure and Alternative Splice Sites by Agreeing ESTs to a Genomic Sequence .....	63
<i>P. Bonizzoni (Università degli Studi di Milano - Bicocca), G. Pesole (Università degli Studi di Milano), and R. Rizzi (Università degli Studi di Milano - Bicocca)</i>	
Optimal DNA Signal Recognition Models with a Fixed Amount of Intrasignal Dependency .....	78
<i>B. Brejová, D.G. Brown, and T. Vinař (University of Waterloo)</i>	

## Genome Mapping

New Algorithm for the Simplified Partial Digest Problem .....	95
<i>J. Błażewicz and M. Jaroszewski (Poznań University of Technology)</i>	
Noisy Data Make the Partial Digest Problem NP-hard .....	111
<i>M. Cieliebak (ETH Zurich), S. Eidenbenz (Los Alamos National Laboratory), and P. Penna (ETH Zurich)</i>	

**Pattern and Motif Discovery**

Pattern Discovery Allowing Wild-Cards, Substitution Matrices, and Multiple Score Functions . . . . .	124
<i>A. Mancheron and I. Rusu (Université de Nantes)</i>	

A Combinatorial Approach to Automatic Discovery of Cluster-Patterns . .	139
<i>R. Eres, G.M. Landau (Haifa University), and L. Parida (IBM TJ Watson Research Center, Yorktown Heights)</i>	

Dynamic Programming Algorithms for Two Statistical Problems in Computational Biology . . . . .	151
<i>S. Rahmann (Max-Planck-Institute for Molecular Genetics)</i>	

**Phylogenetic Analysis**

Consensus Networks: A Method for Visualising Incompatibilities in Collections of Trees . . . . .	165
<i>B. Holland (Massey University) and V. Moulton (Uppsala University)</i>	

Efficient Generation of Uniform Samples from Phylogenetic Trees . . . . .	177
<i>P. Kearney (Caprion Pharmaceuticals), J.I. Munro, and D. Phillips (University of Waterloo)</i>	

New Efficient Algorithm for Detection of Horizontal Gene Transfer Events . . . . .	190
<i>A. Boc and V. Makarenkov (Université du Québec)</i>	

Ancestral Maximum Likelihood of Evolutionary Trees Is Hard . . . . .	202
<i>L. Addario-Berry (McGill University), B. Chor (Tel-Aviv University), M. Hallett (McGill University), J. Lagergren (KTH, Stockholm), A. Panconesi (Università di Roma “La Sapienza”), and T. Wareham (Memorial University of Newfoundland)</i>	

A Linear-Time Majority Tree Algorithm . . . . .	216
<i>N. Amenta (University of California, Davis), F. Clarke, and K. St. John (City University of New York)</i>	

Bayesian Phylogenetic Inference under a Statistical Insertion-Deletion Model . . . . .	228
<i>G. Lunter, I. Miklós, A. Drummond (University of Oxford), J.L. Jensen (University of Aarhus), and J. Hein (University of Oxford)</i>	

Better Hill-Climbing Searches for Parsimony . . . . .	245
<i>G. Ganapathy, V. Ramachandran, and T. Warnow (University of Texas)</i>	

Computing Refined Buneman Trees in Cubic Time . . . . .	259
<i>G.S. Brodal, R. Fagerberg (University of Aarhus), A. Östlin (University of Copenhagen), C.N.S. Pedersen (University of Aarhus), and S.S. Rao (University of Waterloo)</i>	

Distance Corrections on Recombinant Sequences . . . . .	271
<i>D. Bryant (University Montréal), D. Huson, T. Klopper, and K. Nieselt-Struwe (University of Tuebingen)</i>	

Parsimonious Reconstruction of Sequence Evolution and Haplotype Blocks . . . . .	287
<i>Y.S. Song and J. Hein (University of Oxford)</i>	

## Polymorphism

Identifying Blocks and Sub-populations in Noisy SNP Data . . . . .	303
<i>G. Kimmel (Tel-Aviv University), R. Sharan (International Computer Science Institute, Berkeley), and R. Shamir (Tel-Aviv University)</i>	

Designing Optimally Multiplexed SNP Genotyping Assays . . . . .	320
<i>Y. Aumann, E. Manisterski (Bar-Ilan University), and Z. Yakhini (Agilent Laboratories)</i>	

Minimum Recombinant Haplotype Configuration on Tree Pedigrees . . . . .	339
<i>K. Doi (University of Tokyo), J. Li, and T. Jiang (University of California)</i>	

## Protein Structure

Efficient Energy Computation for Monte Carlo Simulation of Proteins . . .	354
<i>I. Lotan, F. Schwarzer, and J.-C. Latombe (Stanford University)</i>	

Speedup LP Approach to Protein Threading via Graph Reduction . . . . .	374
<i>J. Xu (University of Waterloo)</i>	

Homology Modeling of Proteins Using Multiple Models and Consensus Sequence Alignment . . . . .	389
<i>J.C. Prasad, M. Silberstein, C.J. Camacho, and S. Vajda (Boston University)</i>	

Side-Chain Structure Prediction Based on Dead-End Elimination: Single Split DEE-criterion Implementation and Elimination Power . . . . .	402
<i>J.A. Spriet (KULAK)</i>	

## Sequence Alignment

A Large Version of the Small Parsimony Problem . . . . .	417
<i>J. Fredslund (University of Aarhus), J. Hein (University of Oxford), and T. Scharling (University of Aarhus)</i>	

Optimal Multiple Parsimony Alignment with Affine Gap Cost Using a Phylogenetic Tree . . . . .	433
<i>B. Knudsen (University of Florida)</i>	
Composition Alignment . . . . .	447
<i>G. Benson (The Mount Sinai School of Medicine)</i>	
<b>String Algorithms</b>	
Match Chaining Algorithms for cDNA Mapping . . . . .	462
<i>T. Shibuya (IBM Tokyo Research Laboratory) and I. Kurochkin (RIKEN Genomic Sciences Center)</i>	
Sequencing from Compomers: Using Mass Spectrometry for DNA De-Novo Sequencing of 200+ nt . . . . .	476
<i>S. Böcker (Technische Fakultät, Universität Bielefeld)</i>	
Bounds for Resequencing by Hybridization . . . . .	498
<i>D. Tsur (Tel Aviv University)</i>	
Selecting Degenerate Multiplex PCR Primers . . . . .	512
<i>R. Souvenir, J. Buhler, G. Stormo, and W. Zhang (Washington University in St. Louis)</i>	
<b>Author Index</b> . . . . .	527

Algorithms in Bioinformatics

Third International Workshop, WABI 2003, Budapest,  
Hungary, September 15-20, 2003, Proceedings

Benson, G.; Page, R. (Eds.)

2003, X, 534 p., Softcover

ISBN: 978-3-540-20076-5
