

Table of Contents

Discrete Geometry for Computer Imagery

Invited Lectures

Topological Digital Topology	1
<i>Ralph Kopperman</i>	
Fuzzy Spatial Relationships from Mathematical Morphology for Model-Based Pattern Recognition and Spatial Reasoning	16
<i>Isabelle Bloch</i>	
Shape Similarity and Visual Parts	34
<i>Longin Jan Latecki, Rolf Lakämper, and Diedrich Wolter</i>	

Peer-Reviewed Papers

On the Morphological Processing of Objects with Varying Local Contrast	52
<i>Pierre Soille</i>	
Watershed Algorithms and Contrast Preservation	62
<i>Laurent Najman and Michel Couprie</i>	
Digital Flatness	72
<i>Valentin E. Brimkov and Reneta P. Barneva</i>	
Shape Preserving Digitization of Ideal and Blurred Binary Images	82
<i>Ulrich Köthe and Peer Stelldinger</i>	
Towards Digital Cohomology	92
<i>Rocio Gonzalez-Diaz and Pedro Real</i>	
New Results about Digital Intersections	102
<i>Isabelle Sivignon, Florent Dupont, and Jean-Marc Chassery</i>	
On Local Definitions of Length of Digital Curves	114
<i>Mohamed Tajine and Alain Daurat</i>	
Characterising 3D Objects by Shape and Topology	124
<i>Stina Svensson, Carlo Arcelli, and Gabriella Sanniti di Baja</i>	
Homotopic Transformations of Combinatorial Maps	134
<i>Jocelyn Marchadier, Walter G. Kropatsch, and Allan Hanbury</i>	

Combinatorial Topologies for Discrete Planes	144
<i>Yukiko Kenmochi and Atsushi Imiya</i>	
Convex Structuring Element Decomposition for Single Scan Binary Mathematical Morphology	154
<i>Nicolas Normand</i>	
Designing the Lattice for Log-Polar Images	164
<i>V. Javier Traver and Filiberto Pla</i>	
On Colorations Induced by Discrete Rotations	174
<i>Bertrand Nouvel and Éric Rémila</i>	
Binary Shape Normalization Using the Radon Transform	184
<i>Salvatore Tabbone and Laurent Wendling</i>	
3D Shape Matching through Topological Structures	194
<i>Silvia Biasotti, Simone Marini, Michela Mortara, Giuseppe Patanè, Michela Spagnuolo, and Bianca Falcidieno</i>	
Contour-Based Shape Representation for Image Compression and Analysis	204
<i>Ciro D'Elia and Giuseppe Scarpa</i>	
Systematized Calculation of Optimal Coefficients of 3-D Chamfer Norms . .	214
<i>Céline Fouard and Grégoire Malandain</i>	
Look-Up Tables for Medial Axis on Squared Euclidean Distance Transform	224
<i>Eric Remy and Edouard Thiel</i>	
Discrete Frontiers	236
<i>Xavier Daragon, Michel Couprie, and Gilles Bertrand</i>	
Towards an Invertible Euclidean Reconstruction of a Discrete Object	246
<i>Rodolphe Breton, Isabelle Sivignon, Florent Dupont, and Eric Andres</i>	
Reconstruction of Discrete Surfaces from Shading Images by Propagation of Geometric Features	257
<i>Achille Braquelaire and Bertrand Kerautret</i>	
Shape Representation and Indexing Based on Region Connection Calculus and Oriented Matroid Theory	267
<i>Ernesto Staffetti, Antoni Grau, Francesc Serratosa, and Alberto Sanfeliu</i>	
Incremental Algorithms Based on Discrete Green Theorem	277
<i>Srećko Brlek, Gilbert Labelle, and Annie Lacasse</i>	

Using 2D Topological Map Information in a Markovian Image Segmentation	288
<i>Guillaume Damiand, Olivier Alata, and Camille Bihoreau</i>	
Topology Preservation and Tricky Patterns in Gray-Tone Images	298
<i>Carlo Arcelli and Luca Serino</i>	
Shortest Route on Height Map Using Gray-Level Distance Transforms	308
<i>Leena Ikonen and Pekka Toivanen</i>	
On the Use of Shape Primitives for Reversible Surface Skeletonization	317
<i>Stina Svensson and Pieter P. Jonker</i>	
d -Dimensional Reverse Euclidean Distance Transformation and Euclidean Medial Axis Extraction in Optimal Time	327
<i>David Coeurjolly</i>	
Efficient Computation of 3D Skeletons by Extreme Vertex Encoding	338
<i>Jorge Rodríguez, Federico Thomas, Dolores Ayala, and Lluís Ros</i>	
Surface Area Estimation of Digitized Planes Using Weighted Local Configurations	348
<i>Joakim Lindblad</i>	
Surface Area Estimation in Practice	358
<i>Guy Windreich, Nahum Kiryati, and Gabriele Lohmann</i>	
Perimeter and Area Estimations of Digitized Objects with Fuzzy Borders	368
<i>Nataša Sladoje, Ingela Nyström, and Punam K. Saha</i>	
Geodesic Object Representation and Recognition	378
<i>A. Ben Hamza and Hamid Krim</i>	
A Fast Algorithm for Reconstructing $h\nu$ -Convex 8-Connected but Not 4-Connected Discrete Sets	388
<i>Péter Balázs, Emese Balogh, and Attila Kuba</i>	
Stability in Discrete Tomography: Linear Programming, Additivity and Convexity	398
<i>Sara Brunetti and Alain Daurat</i>	
Removal and Contraction for n -Dimensional Generalized Maps	408
<i>Guillaume Damiand and Pascal Lienhardt</i>	
The Generation of N Dimensional Shape Primitives	420
<i>Pieter P. Jonker and Stina Svensson</i>	
Geometric Measures on Arbitrary Dimensional Digital Surfaces	434
<i>Jacques-Olivier Lachaud and Anne Vialard</i>	

Nonlinear Optimization for Polygonalization	444
<i>Truong Kieu Linh and Atsushi Imiya</i>	
A Representation for Abstract Simplicial Complexes: An Analysis and a Comparison	454
<i>Leila De Floriani, Franco Morando, and Enrico Puppo</i>	
A Computation of a Crystalline Flow Starting from Non-admissible Polygon Using Expanding Selfsimilar Solutions	465
<i>Hidekata Hontani, Mi-Ho Giga, Yoshikazu Giga, and Koichiro Deguchi</i>	
Morphological Image Reconstruction with Criterion from Labelled Markers	475
<i>Damián Vargas-Vazquez, Jose Crespo, and Victor Maojo</i>	
Intertwined Digital Rays in Discrete Radon Projections Pooled over Adjacent Prime Sized Arrays	485
<i>Imants Svalbe and Andrew Kingston</i>	
Power Law Dependencies to Detect Regions of Interest	495
<i>Yves Caron, Harold Charpentier, Pascal Makris, and Nicole Vincent</i>	
Speed Up of Shape from Shading Using Graduated Non-convexity	504
<i>Daniele Gelli and Domenico Vitulano</i>	
Tissue Reconstruction Based on Deformation of Dual Simplex Meshes	514
<i>David Svoboda and Pavel Matula</i>	
Spherical Object Reconstruction Using Simplex Meshes from Sparse Data	524
<i>Pavel Matula and David Svoboda</i>	
A System for Modelling in Three-Dimensional Discrete Space	534
<i>Andreas Emmerling, Kristian Hildebrand, Jörg Hoffmann, Przemyslaw Musialski, and Grit Thürmer</i>	
Interactively Visualizing 18-Connected Object Boundaries in Huge Data Volumes	544
<i>Robert E. Loke and Hans du Buf</i>	
Author Index	555

Discrete Geometry for Computer Imagery

11th International Conference, DGCI 2003, Naples, Italy,

November 19-21, 2003, Proceedings

Nyström, I.; Sanniti di Baja, G.; Svensson, S. (Eds.)

2003, XII, 556 p., Softcover

ISBN: 978-3-540-20499-2
