Part I Fundamentals & Related Work

1	Introduction	3
1.1	Motivation	4
1.2	Reader's Guide	5
1.2.1	Structure of This Work	5
1.2.2	Historical Perspective	6
2	Terminology and Overview	9
2.1	Terminology	9
2.1.1	Economic Concepts Used in This Work	10
2.1.2	Concepts from Computer Science	12
2.2	General Field	22
2.2.1	Electronic Markets	23
2.2.2	Electronic Negotiations and Electronic Auctions	24
2.2.3	Multi-Agent Systems	25
2.3	Matchmaking in Electronic Negotiations	26
2.4	Phases of Matchmaking	28
2.5	Application Domains for eNegotiations	30
2.5.1	Matchmaking in Multi-attribute Auctions	30
2.5.2	Multidimensional Matchmaking in Human Resources Negotiation	33
2.6	Summary	34
3	Related Work	37
3.1	Matchmaking Approaches	38
3.1.1	Application Oriented Matchmaking Mechanisms	38
3.1.2	Matchmaking in the SHADE and COINS Approach	39
3.1.3	Service Classification in Agents' Societies	41
3.1.4	Matchmaking versus Brokering	42
3.1.5	Middle Agents – Role Definitions for Mediating Agents	45
3.1.6	LARKS: Interoperability among Heterogeneous Software Agents	46
3.1.7	Matchmaking Approaches for Heterogeneous Active Agents	51

3.1.8	The InfoSleuth Approach	55
3.2	Electronic Negotiation Approaches	56
3.2.1	Electronic Negotiation – The Montreal Taxonomy	57
3.2.2	Electronic Negotiation Approaches with Information Systems Focus	60
3.2.3	Electronic Negotiation Approaches with Multi-Agent Systems Focus	68
3.2.4	Electronic Auctions	71
3.3	Discussion	72
3.4	Summary	75

Part II The Multidimensional Matchmaking Approach

4	Matchmaking Architecture	79
4.1	Concepts	79
4.2	Generic Matchmaking Framework – Overview	80
4.2.1	GRAPPA Matchmaking Engine	81
4.2.2	GRAPPA Matchmaking Library	82
4.2.3	GRAPPA Toolkit	83
4.3	Modelling Multidimensionality	83
4.4	The GRAPPA Framework	84
4.4.1	The Offer and Request Description Language (ORDL) of GRAPPA	85
4.4.2	Basic Types in GRAPPA	89
4.4.3	Heterogeneous Offer and Request Profiles	95
4.5	Distance Functions and Metrics	97
4.5.1	Metric Definition and Properties	98
4.5.2	Distance Functions for the Basic Type FreeText	100
4.5.3	Distance Computations for Numbers, Intervals, Dates, and Times	108
4.5.4	Aggregate Functions for Complex Types	111
4.5.5	Weighting Paradigms for Complex Matchmaking	114
4.6	Summary	117
5	Matchmaking Implementation	119
5.1	Scope	119
5.2	Applied Technology	120
5.2.1	JAVA	121
5.2.2	RMI Server – Remote Method Invocation	122
5.2.3	EJB – Enterprise Java Beans	122
5.3	Implementation of GRAPPA	123
5.3.1	Basic Entities and Processes	123
5.3.2	Configuration	124

5.3.3	Matchmaking JAVA-library <code>de.siemens.zt.ik6matching</code>	127
5.3.4	Deployment as Enterprise Java Beans Component	130
5.4	Summary.....	131

Part III Application, Evaluation & Outlook

6	Application in a Real-World Market	135
6.1	Scope	135
6.1.1	Human Resource Information Systems	135
6.1.2	Job Exchanges and Corporate Networks	136
6.2	Project Background	137
6.3	HRNETAGENT	138
6.3.1	Adaption of GRAPPA for HRNETAGENT	139
6.3.2	Results.....	140
6.4	Summary.....	140
7	Empirical Evaluation	143
7.1	Domain Independent Experiments with GRAPPA: Performance	143
7.2	Domain Specific Experiments	145
7.2.1	Method for Case Studies	145
7.2.2	Settings	145
7.2.3	Measures	147
7.2.4	Results.....	148
7.2.5	Discussion	151
7.3	Summary.....	160
8	Conclusions and Outlook	161
8.1	Review of This Work	162
8.2	Future Work	164
8.2.1	Limitations of This Approach	164
8.2.2	Extension of Multidimensional Matchmaking Using Ontologies and Learning	165
8.2.3	Further Application of Multidimensional Matchmaking in the Finance Domain	165
8.2.4	Multidimensional Matchmaking, Web Services, and the Grid	166
	References	169
	Index	177
