Part I. Adsorption in Processing Technologies

Surface Analytical Studies of Oxidation and Collector Adsorption in Sulfide Mineral Flotation

Roger S. C. Smart, John Amarantidis, William M. Skinner,

Clive A. Prestidge, Lori La Vanier and Stephen R. Grano3

1. Introduction	3
1.1. Techniques	6
1.2. Surface Oxidation	7
2. Case Studies of Oxidation Mechanisms	8
2.1. Metal-Deficient Sulfides, Polysulfides and Elemental Sulfur	8
2.2. Oxidized Fine Sulfide Particles	16
2.3. Colloidal Metal Hydroxide Particles and Flocs	18
2.4. Continuous Oxide/Hydroxide Surface Layers	20
2.5. Sulfate and Carbonate Species	22
2.6. Patchwise and Face Specific Oxidation	23
2.7. Actions of Collector Molecules	27
3. Actions of Collectors: Case Studies	28
3.1. Adsorption to Specific Surface Sites	28
3.2. Precipitation from Solution	30
3.3. Detachment of Oxidized Fine Sulfide Particles	32
3.4. Detachment of Colloidal Oxide/Hydroxide Particles	40
3.5. Removal of Oxidized Surface Layers	40
3.6. Inhibition of Oxidation	44
3.7. Aggregation and Disaggregation	45
3.8. Patch-wise and Face-specific Collector Interaction	46
3.9. Implications for Flotation Practice	47
4. Remaining Research Issues	48
4.1. Oxidation Mechanisms	48
4.2. Collector Adsorption and Reaction Mechanisms	51
References	53

**Metals from Sulfide Minerals: The Role of Adsorption
of Organic Reagents in Processing Technologies**

Alan N. Buckley, Gregory A. Hope and Ronald Woods	61
1. Adsorption at the Solid–Solution Interface	62
2. Flotation	63
3. Interaction of Thiol Collectors with Metal and Sulfide Mineral Surfaces	63
3.1. Electrochemical Approaches	64
3.2. Potential Dependence of Hydrophobicity and Flotability	68
3.3. Spectroelectrochemical Studies	70
3.4. Electron Spectroscopy	75
3.5. Static Secondary Ion Mass Spectrometry	84
4. Electrowinning and Electrorefining	86
5. Adsorption of Thiourea on Copper Cathodes	87
5.1. Electrochemical Techniques	87
5.2. Raman Scattering Spectroscopy	89
6. Concluding Remarks	92
References	92

**SXPS and XANES Studies of Interface Reactions
of Organic Molecules on Sulfide Semiconductors**

Dirk Mayer, Karl Heinz Hallmeier, Dominic Zerulla and Rüdiger Szargan	97
1. Introduction	97
2. Experimental	98
3. Results and Discussion	99
3.1. Chemical Composition of the Adsorbate	99
3.2. Orientation of the Adsorbed Molecules	102
3.3. Thermal Activation of the Adsorption	104
3.4. Photooxidation of the Adsorbate	107
4. Conclusions	110
References	111

Recovery of Gold from Its Ores:

**An STM Investigation of Adsorption of the Aurocyanide
onto Highly Orientated Pyrolytic Graphite**

Eddy Poinen and Steve M. Thurgate	113
1. Overview	113
2. Applications of Gold	114
3. Gold in Nature	115
3.1. Gold in Australia	116
4. Processing of Gold	116
4.1. The Cyanidation Step	117

4.2. Concentration	118
4.3. The CIP/CIL Process	119
5. Activated Carbon	120
5.1. Activated Carbon in the Gold Industry	120
5.2. Physical Properties of Activated Carbon	121
5.3. Chemical Properties of Activated Carbon	123
6. Investigations of Gold Adsorption on Activated Carbon	123
6.1. Kinetics Loading Capacity Studies	124
6.2. Spectroscopic Investigations	124
6.3. Mössbauer Spectroscopy	124
6.4. Infrared Spectroscopy	125
6.5. X-ray Photoelectron Spectroscopy	125
7. Influence of Graphitic Structure	126
8. Scanning Tunnelling Microscopy of Graphite	127
9. Experimental	128
10. Results and Discussion of In Situ STM Investigations	128
10.1. $\text{KAu}(\text{CN})_2/\text{KOH}/\text{HOPG}$	128
10.2. $\text{KAu}(\text{CN})_2/\text{KOH}/\text{CaCl}_2/\text{HOPG}$	129
11. Discussions	133
11.1. In Situ STM Findings in the Presence of Ca^{2+}	134
11.2. Probable Mechanism of Interaction	135
12. Concluding Remarks	135
References	136

Part II. Anion Adsorption

Atomic Structure of Cu(111) Surfaces in Dilute Sulfuric Acid Solution

Peter Broeckmann, Michael Wilms, Matthias Arenz,

Alexander Spänig and Klaus Wandelt 141

1. Introduction	141
2. Experimental	143
3. Sulfate Adsorption	147
3.1. Electrochemical and Spectroscopic Characterization	147
3.2. Atomic Structure of the Bare Cu(111) Electrode	151
3.3. Atomic Structure of the Adsorbate Layer	153
3.4. Adsorption Site Configuration	164
3.5. Adsorption/Desorption Kinetics	167
3.6. Surface Morphology	172
3.7. Anodic Corrosion	183
3.8. Cationic Structures	184
3.9. Metastable Structures	191
References	195

Chloride Adsorption on Cu(111) Electrodes:**Electrochemical Behavior and UHV Transfer Experiments**

Christopher Stuhlmann, Bernd Wohlmann, Zin Park,

Michael Kruft, Peter Broekmann and Klaus Wandelt 199

1. Introduction	199
2. Experimental	200
3. Results	201
3.1. Cyclic Voltammetry	201
3.2. UHV Transfer Experiments	204
3.3. Scanning Tunneling Microscopy	210
4. Discussion	212
4.1. Influence of the Hydrogen Evolution Reaction on the Cyclic Voltammograms	212
4.2. Influence of the Emersion Step on the Transfer Experiment	218
5. Summary	220
References	220

SHG Studies on Halide Adsorption at Au(111) Electrodes

Bruno Pettinger, Christoph Bilger and Jacek Lipkowski 223

1. Introduction	223
2. SHG Anisotropy at Metal Electrodes	224
2.1. SHG Anisotropy	224
2.2. Earlier SHG Anisotropy Studies on Halide Adsorption	225
2.3. Problems in Evaluation of Susceptibility Coefficients	227
3. Concept of Interference SHG Anisotropy	229
4. Halide Ion Adsorption on Au(111)	232
5. Conclusion	238
References	239

Part III. Electrochemical Surface Modification

**Electrodeposited Magnetic Monolayers: In-Situ Studies
of Magnetism and Structure**

Werner Schindler 243

1. Motivation	243
2. Experimental Details	244
3. Co on Cu(001)	246
4. Fe on Cu(001)	252
5. Discussion	256
References	257

Structural Transitions in Organic Adlayers –**A Molecular View**

Thomas Dretschkow and Thomas Wandlowski	259
1. Introduction	259
2. Characterization of Selected Substrate Surfaces	262
2.1. Au(111) in 0.05 M H ₂ SO ₄	262
2.2. Au(100) in 0.05 M H ₂ SO ₄	265
3. Structural Transitions in Adlayers of Uracil Derivatives on Au(<i>hkl</i>)	267
3.1. General Overview – Results of Classical Electrochemical Studies	268
3.2. In-Situ STM Experiments with Uracil Adsorbed on Au(<i>hkl</i>) ...	276
3.3. Dynamic Processes on the Au(100) Surface in the Presence of Uracil	286
3.4. Thymine (5-Methyluracil, 5-MU) on Au(111)	291
4. 2,2-Bipyridine Adlayers on Au(111) and Au(100)	293
4.1. General Overview – 2,2'-Bipyridine on Au(111)	294
4.2. Dynamic Processes	300
4.3. 2, 2'-Bipyridine on Au(100)	307
5. 4, 4'-Bipyridine on Au(111)	313
6. Concluding Remarks	315
References	316

Part IV. Interface Reactions

**Imaging Localized Reactivities of Surfaces
by Scanning Electrochemical Microscopy**

Gunther Wittstock	335
1. Introduction	335
2. Working Principle	336
2.1. Properties of Amperometric Ultramicroelectrodes in Bulk Solution	336
2.2. Basic Setup	338
2.3. Feedback Mode	338
2.4. Generation–Collection Mode	343
2.5. Direct Mode	344

3. Application	345
3.1. Imaging of Composite Materials	345
3.2. Corrosion	348
3.3. Investigation of Biochemically Active Samples	349
3.4. Localized Mass Transport	354
4. Experimental Consideration	356
4.1. Hardware	356
4.2. Software	357
4.3. Probes	358
4.4. Vertical Tip Positioning	359
4.5. Distance Control Mechanism	359
References	360

**Surface Reactions of Hot Electrons
at Metal–Liquid Interfaces**

Detlef Diesing, Guido Kritzler and Andreas Otto	365
1. Introduction	365
2. Creation of Hot Charge Carriers by Metal–Insulator–Metal (MIM) Junctions	367
3. Preparation Techniques and their Influence on Surface and Bulk Properties of MIM Junctions	369
3.1. Experimental Setup	369
3.2. Characterization of the Tunnel Barrier	370
3.3. Crystallographic Orientation of MIM Systems Grown on Glass Substrates	373
3.4. Electrochemical Setup	373
3.5. Energy Levels	376
4. Linear Surface Optics with MIM Systems	377
4.1. The “Threshold Excitation”	377
4.2. Inverse Photoemission with Hot Electrons, Internal Photoemission	379
4.3. Light Emission from MIM Junctions via Intermediate Surface Plasmon Polaritons	380
4.4. Results on IPE by Hot Electrons	381
4.5. Results on Internal Photoemission	384
4.6. Discussion of the Optical Results	385
4.7. Optical Surface and Bulk Absorption of Free-Electron Metals ..	388
5. Chemical Reactions with Hot Electrons	390
5.1. Emission of Hot Electrons into the “Dry Electron” State	390
5.2. Hydrogen Evolution	391
5.3. Hydrogen Oxidation	393
5.4. Model on the Role of Roughness in Hot-Electron Transfer	396

6. Dependence of the Internal Tunnel Current on the Surface Conditions of the Top Electrode	404
6.1. Controlling the Internal Tunnel Current I_T without Faradaic Reactions	405
6.2. Model of Dephasing at the Outer Interface of a MIM Junction	408
6.3. Modulation of Internal Tunnel Current I_T by Faradaic Reactions at the Top Electrode	411
7. Sensorics with MIM Junctions	418
8. Outlook	419
