<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Variational problems with linear growth: the general setting</b>	<b>13</b>
2.1	Construction of a solution for the dual problem which is of class $W_{2,loc}^1(\Omega; \mathbb{R}^{nN})$	14
2.1.1	The dual problem	14
2.1.2	Regularization	16
2.1.3	$W_{2,loc}^1$ -regularity for the dual problem	19
2.2	A uniqueness theorem for the dual problem	20
2.3	Partial $C^{1,\alpha}$ - and $C^{0,\alpha}$ -regularity, respectively, for generalized minimizers and for the dual solution	25
2.3.1	Partial $C^{1,\alpha}$ -regularity of generalized minimizers	26
2.3.2	Partial $C^{0,\alpha}$ -regularity of the dual solution	29
2.4	Degenerate variational problems with linear growth	32
2.4.1	The duality relation for degenerate problems	33
2.4.2	Application: an intrinsic regularity theory for $\sigma$	39
<b>3</b>	<b>Variational integrands with <math>(s, \mu, q)</math>-growth</b>	<b>41</b>
3.1	Existence in Orlicz-Sobolev spaces	42
3.2	The notion of $(s, \mu, q)$ -growth – examples	44
3.3	A priori gradient bounds and local $C^{1,\alpha}$ -estimates for scalar and structured vector-valued problems	50
3.3.1	Regularization	52
3.3.2	A priori $L^q$ -estimates	54
3.3.3	Proof of Theorem 3.16	61
3.3.4	Conclusion	67
3.4	Partial regularity in the general vectorial setting	69
3.4.1	Regularization	69
3.4.2	A Caccioppoli-type inequality	70
3.4.3	Blow-up	72
3.4.3.1	Blow-up and limit equation	74
3.4.3.2	An auxiliary proposition	76
3.4.3.3	Strong convergence	83
3.4.3.4	Conclusion	86
3.4.4	Iteration	87

3.5	Comparison with some known results .....	89
3.5.1	The scalar case .....	89
3.5.2	The vectorial setting .....	90
3.6	Two-dimensional anisotropic variational problems .....	91
4	<b>Variational problems with linear growth: the case of <math>\mu</math>-elliptic integrands</b> .....	97
4.1	The case $\mu < 1 + 2/n$ .....	100
4.1.1	Regularization .....	101
4.1.2	Some remarks on the dual problem .....	101
4.1.3	Proof of Theorem 4.4 .....	103
4.2	Bounded generalized solutions .....	104
4.2.1	Regularization .....	108
4.2.2	The limit case $\mu = 3$ .....	111
4.2.2.1	Higher local integrability .....	111
4.2.2.2	The independent variable .....	113
4.2.3	$L^p$ -estimates in the case $\mu < 3$ .....	116
4.2.4	A priori gradient bounds .....	118
4.3	Two-dimensional problems .....	122
4.3.1	Higher local integrability in the limit case .....	123
4.3.2	The case $\mu < 3$ .....	129
4.4	A counterexample .....	132
5	<b>Bounded solutions for convex variational problems with a wide range of anisotropy</b> .....	141
5.1	Vector-valued problems .....	142
5.2	Scalar obstacle problems .....	149
6	<b>Anisotropic linear/superlinear growth in the scalar case</b> ...	161
A	<b>Some remarks on relaxation</b> .....	173
A.1	The approach known from the minimal surface case .....	174
A.2	The approach known from the theory of perfect plasticity .....	176
A.3	Two uniqueness results .....	181
B	<b>Some density results</b> .....	185
B.1	Approximations in BV .....	185
B.2	A density result for $\mathcal{U} \cap L(c)$ .....	191
B.3	Local comparison functions .....	194
C	<b>Brief comments on steady states of generalized Newtonian fluids</b> .....	199
D	<b>Notation and conventions</b> .....	205
	<b>References</b> .....	207
	<b>Index</b> .....	215

Convex Variational Problems

Linear, nearly Linear and Anisotropic Growth Conditions

Bildhauer, M.

2003, XII, 220 p., Softcover

ISBN: 978-3-540-40298-5
